## NEW CARNATIONS

Three Top Notch Ones

### MAINE SUNSHINE

(Strout's, Inc.)

Clear, golden yellow. Seedling from Mrs. C. W. Ward and Crystal White. Easy to grow. Resembles Matchless in size and form. Truly a wonderful yellow variety.

$15 per 100, $120 per 1,000

### WHITE DELIGHT

(Strout's, Inc.)

Clear white sport from Pink Delight. An improvement over its parent in all but color. It POSITIVELY is more vigorous in growth than Pink Delight.

$12 per 100, $100 per 1,000

### HOPE HENSHAW

(A. N. Pierson, Inc.)

Seedling from Mrs. C. W. Ward and Good Cheer. Similar in color to Good Cheer. Of very free and easy growth. Promises to be a profitable cerise pink.

$12 per 100, $100 per 1,000

WE CAN STILL BOOK ORDERS FOR EARLY DELIVERY

## L. J. REUTER CO.

## FERNS

We wish to call particular attention to our fine stock of ferns which we are offering at this time. We can give you extra value in all of the sizes and would recommend that orders be placed at once for whatever stock you need. These ferns will often take the place of high priced flowers and will give your customers good satisfaction. Just at this time we can give you exceptionally good value.

**NEPHROLEPIS VICTORIA (The Victory Fern).** A beautiful, new, crested form of Teddy, Jr. 2¼ inch pots, $3.00 per dozen, $20.00 per 100; 3½-inch pots, 50c. each; 6-inch, $1.00 each; large specimens, 8-inch, $3.00 each.

**NEPHROLEPIS elegantissima compacta.** 3½-inch pots, 50c. each; 6-inch, $1.00 each; large specimens, 8-inch, $2.00 to $3.00 each; 12-inch, $6.00 to $7.50 each.

**NEPHROLEPIS Muscosa.** 3½-inch pots, 50c. each; 5-inch $1.00 each.

**NEPHROLEPIS Superbissima.** 12-inch pots, $6.00 each.

**NEPHROLEPIS Dwarf Boston.** 6-inch pots, $1.00 each; 8-inch, $2.00 each.

Packing added extra at cost.

**F. R. PIERSON, Tarrytown, N. Y**

## FERNS

Are all pot grown and are in good, shipped without pots:—

BOSTONS and SCOTTII:—

| | | |
|---|---|---|
| 4 inch | $3.60 per doz. | $25.00 per 100 |
| 5 inch | 5.40 per doz. | 40.00 per 100 |
| 6 inch | 8.00 per doz. | 60.00 per 100 |

HOLLY FERNS, Cyrotonun Rockfordianum:—
4 inch $3.60 per doz. 5 inch $6.00 per doz.

BIRDS NEST—5 inch $1.00 each

TABLE FERNS, assorted—3 inch $6.00 per 100

## NEW ENGLAND NURSERYMEN

### Program for the Annual Convention to Be Held in Boston Jan. 25-26

The annual convention of the New England Nurserymen's Association will be held at the American House in Boston, Jan. 25 and 26. Everyone engaged in the growing of general nursery stock whether a member or not is invited to be present. The program is as follows:

**Tuesday, January 25, 1.30 P. M.**

Roll Call of Members.
President's Address.
Reports of Officers and Committees.
Appointment of Auditing and Nominating Committees.
Address:
"Business Conditions and Outlook,"
Mr. Windsor H. Wyman.
"Nursery Conditions in Europe,"
Mr. J. K. M. L. Farquhar.
"Supply and Demand,"
Mr. A. E. Robinson.

**Tuesday, 7 P. M.**

Banquet and Entertainment.

**Wednesday, January 26, 9.30 A. M.**

Reports of Special Committees.
Election of Officers.
Address:
"Nursery Training in Schools and Colleges,"
Prof. Frank A. Waugh.
"Quarantine No. 37"
Mr. J. H. MacFarland.
"The American Association,"
Mr. John Watson.
Discussion.

## FORREST A SCOTCHMAN

Editor of HORTICULTURE:

In your issue of Dec. 23 I read with great pleasure that the George Robert White Medal of Honor for the year 1920 has been awarded to George Forrest. From Mr. Rich's notes one would think he is an Englishman. He is a Scotchman and was born in Falkirk, Scotland, in 1873. Men who know of Mr. Forrest's achievements as a plant collector will be gratified that this honor has been bestowed upon him. On one of his trips to China he endured more hardships probably than any other collector ever did.

ROBERT CAMERON,
Castle Hill, Ipswich, Mass.

William and John Rider, florists of Mill Road, Wantagh, N. Y., are making extensive improvements, including the construction of a new greenhouse.

The Ashtabula Floral Co. gas opened a new store at Ashtabula, Ohio, with Ernest T. Tong as manager. The concern has adopted as its motto, "Say It With Our Flowers."

**Lily of the Valley Pips**

Extra fine strain
EXHIBITION size

German "LUBECK" Pips just arrived

Price in cases 1,000, 500, or 250 each, on application.

## THE TALK OF THE TRADE

A new rose, Columbia supreme, an introduction this year, has all the ear marks of a valuable sort. Columbia will be remembered by growers in years to come as a rose of general value to all growers. Whenever roses are forced under glass Columbia will be found, and it will be placed in the list of forcing roses along with Bride, Bridesmaid, Killarney and Ophelia as good stand-bys. We now are interested in a sport of Columbia which has every indication of being equally as good. It is said that Columbia supreme carries all the desirable characteristics of its parent. Practically the only difference is the color. It is much deeper in color, running almost as deep as Killarney Brilliant. The variety is claimed to be better than Columbia, and having the great freedom of growth and flower, with the ability to fight against mildew, black spot and other diseases, it should find its place with the best forcing sorts. Rose growers who have seen this variety think very well of it, and advance sales indicate very heavy plantings for this coming season.

Another rose from which we have a right to expect a great deal is Golden Ophelia. In spite of the name it is not a sport but a seedling from Ophelia. In growth it is similar to its parent, and the foliage is particularly fine. Another point which is pleasing is that it grafts readily, and not many yellow roses have that good point. The color of the flowers is a true, deep yellow, not shaded, but even through the entire flower. And furthermore it has been sufficiently tried during the past year to warrant planting this year. There should be no doubt about it making good.

---

I find there is a good call for small plants of Feverfew at about this time, with very little stock to go around. Anyone having 2¼ in. plants beyond his own needs will do well to make it known, as it is time now to get them planted and coming along for spring flowering. In fact, there are quite a number of lines which the florist handling mixed stock must keep his mind on. For instance, seeds of Vinca alba and Vinca rosea should be sown now to give good results for spring pot plant sales, and stock for Memorial Day cut flower purposes will want to be coming along steadily also. Memorial Day seems a long way off at Christmas time, but January brings to our attention a lot of lines that must be handled.

---

Geranium stock is scarce again, as for the last few seasons. In fact, there is no variety of geraniums offered in any quantity except S. A. Nutt. This is one of the best sorts, but it can't take the place entirely of Ricard, and of course Poitevine and Jean Viaud are always needed in quantities.

Rose House of A. N. Pierson, Cromwell, Conn.

JUL 11 1923

Max Schling has an active mind, and knows that the best advertising is not necessarily the kind that is paid for. When he talked to a reporter of the New York Times recently, with the result that a column story appeared in that great paper, he did a good piece of work, not only for himself but for the whole florist trade. I wonder, though, if what he says about the growing use of fancy boutonnierres applies to other cities as well as New York. The time was when it was a very common thing for men everywhere to wear a buttonhole flower, but of late years there seems to have been a tendency to abandon the practice. However, Mr. Schling speaks about the custom as follows:

"For boutonnieres many men now stop at the florists regularly every morning for a flower. It is a standing

MAX SCHLING

order, and they pay for whatever it is, 15 cents in winter and 10 cents in summer. Gardenias are not the favorite flower now for general use, only for evening or for formal occasions. In France and England for many years men have worn carnations, and now they are doing it more here, a red carnation—the dark red, not the bright Christmas variety—for daytime and the white one for evening. There are certain men who always wear one of the tiny Sweet Heart roses, and they pay 10 cents in winter and 5 cents in summer. All the flower wearing has been a propaganda of cheerfulness since the war."

I certainly hope that the tendency is running again in the direction of using buttom hole flowers, as the custom is a good one. Not only does it stimulate the sale of carnations, but what is more important, it gets men to come into the stores, with the result that other orders are given.

---

Mr. Schling has also noted, and no doubt has taken advantage of, the growing custom of having flowers in offices. This suggests an opportunity to which many florists might well give their attention. With a little solicitation a considerable business can be built up in this way. Mr. Schling talked about the matter to the reporter in the following words:

"In a man's office he has nothing but a dull routine of business. He looks from the window and he sees nothing but more business—some one drumming on a typewriter—and he needs something beautiful for rest and relaxation. Men have learned this, and I could tell you of thirty or forty offices where there is a standing order for a few roses to be left several times a week. In some of the offices they have them sent Mondays, Wednesdays and Fridays, and in others, Mondays, Wednesday and Saturdays, and the last they take home. If they are not roses they will be the spring, summer or fall flowers, as they are in season. A few men have a quantity of flowers to fill several vases, and now when a man has a birthday his family and his friends send flowers to his office, where he will enjoy them more than he will at home."

---

Burpee's Annual is one of the first catalogues to reach my desk, and as usual is replete with color and fascinating in its description of new plants. Among the latter are several sweet peas which ought to make a wide appeal. They include Glitters, a colored picture of which appears on the back cover, Flamingo, Lemon Beauty and Peach Blossom, three others illustrated in colors inside the catalogue. These are superb novelties, and will enhance the Burpee reputation. Other novelties include a new cactus flowered zinnia, some new dahlias, and a new half long beet.

---

I notice that the Burpees are announcing a reduction in prices for 1921. This is quite opposite to what it had been expected from seedsmen in general, as a result of certain advance announcements. The catalogue contains a slip which is calculated to induce early ordering, something to be desired by all seedsmen. Ten per cent. extra value will be given on all vegetable and flower seeds purchased during January or February. This applies to retail orders for vegetable and flower seeds, and ought to help in avoiding the late spring rush.

A. L. MILLER
JAMAICA - - NEW YORK

John Lewis Childs has also come along with his new catalogue, which also includes several novelties, among the most interesting being the famous Chinese Wool flower in the three new colors, light yellow, scarlet and pink. This plant has steadily made headway, and is now being widely used as a summer bedder, for which it is well adapted. Mr. Childs is also featuring zinnias, of which he has many kinds, including a curious conical zinnia, and the English novelty achievement.

Retail florists who want to get pointers on window dressing should apply to the New York Floral Co., doing business in New Rochelle. Some time ago the business men's section of the Chamber of Commerce announced a window display contest. There were several hundred entries. The competition was very keen, and the judges were obliged to go over the windows of the best half dozen or more several times before they finally reached a decision, but there seems to have been general satisfaction in the award, which gave the first prize to the flower concern.

It would seem as though similar contests might be carried out with success in other cities.

It seems that our English cousins are having a hard time in fixing prices for seeds, especially flower seeds. According to the Manchester Guardian-Commercial there are constant surprises in this line.

While sweet peas are almost non-existent. Most of the contracts are now delivered and at the time of writing, in addition to the absence of white, there is a very marked scarcity of red and pink. In fact, the feature of the market is that the colors usually so plentiful are now very difficult to find. Asters, stocks, eschscholtzia and nigella are all very scarce.

For that matter, it appears that there is scarcity in some flower seeds in this country. H. M. Barr, of Ventura, Cal., reports a crop about 50 per cent normal. There is a shortage of Cobea scandens, and Salvia is only about half a crop. Petunias, the main crop produced by Mr. Barr, will make only 60 per cent, although the field was fortunately doubled in size last year so that there will be as great a quantity of seed as before.

The Hauger Co., of Indianapolis, Ind., is consolidating its three stores and will occupy the entire lower floor of the Taggart Building on Massachusetts avenue, having acquired a 25-year lease.

# RAMBLING OBSERVATIONS OF A ROVING GARDENER

Are you prepared to be shocked? Gertrude Jekyll, apostle of flower arrangement and beautiful borders has on her lawn a verdant sculptured pedestal with a verdant sculptured cat quietly reposing thereon. We have the authority of a writer in one of the English papers for making this statement. But perhaps after all there isn't anything quite so gaucherie about sculptured trees and shrubs as some of us had supposed. In any event this particular writer takes the attitude that the modern topiarist has a place in gardens, stating with emphasis that the broad lawns of certain estates where this form of art has been indulged in loses neither in dignity nor charm from the introduction of various pieces of the topiarian's art. Surely, he says, and perhaps with justice, that topiary work appeals to sentiment. To be sure, it is art gardening, if you like, but notwithstanding all that its detractors may say, it has a niche in our garden economy. Take notice, please that all these remarks are those of the English author and not my own. My own position is much like that of the man on the fence, ready to jump either way according to which bull reached him first.

At a recent exhibition across the seas a wonderful group of figures carved out of yew and boxwood were shown by Messrs. Waterer Son & Crisp. The workmanship of the individual pieces was remarkable, and all of the sculpturing was done by a father and son in the firm's employment who gave the whole of their working hours to this art. At the same exhibition topiary work was shown where the material used was Ilex crenata, also gold and silver box and green and golden yews. One figure represented a stately gothic chair of yew with triple pointed back and several cork screw spirals. And if people like things of this sort, why should they not be allowed to possess them without having their ears burn as a result of the caustic criticism on the part of others who perhaps have set themselves up as arbiters of garden artistry. After all, it is a question of taste, and your taste may be quite as good as mine, even though it runs in a different channel. In any event, topiary work made its appeal to the ancients, and perhaps you remember Tennyson's "Enoch Arden" where the reference is made to

". . . . . the portalwarding lion-whelp,
And peacock-yewtree of the lonely Hall.
Whose Friday fare was Enoch's ministering."

---

I remember that the late Maurice Fuld always grew enthusiastic over the plan of planting a rose bed with lower growing blossoms to make a living mulch. Mr. Fuld would have been pleased with the advocacy of the same plan as it is presented in "Gardening Illustrated." The writer says:

I have no sympathy with those who tell us that we must set out our roses in hard lines and allow no other flowers to be used in conjunction with them. This is the gospel of the rose exhibitor, and has nothing to do with those who are striving for a flower garden beautified with permanent and not transitory occupants. It is easy to break away from the orthodox system of spring and summer bedding, with its often faulty coloring, now that we have so many glorious ever-blooming roses, as well as a wealth of delicately beautiful hardy plants to serve as a restful carpet to the rose flowers. I have grown daffodils amongst my Tea Roses for some years, and always with the best results.

A number of plants which have been found suitable for carpeting rose beds, according to this writer, include the following:

Hutchinsia alpina, a lovely little evergreen plant much like a miniature Candytuft; Linaria hepaticæfolia, the tiny Liverwort-leaved Toadflax, not much higher than a Moss; Mentha Requieni, scarcely hardy; Polygonum capitatum, only half-hardy, but a lovely creeping plant, with prettily-marbled leaves and little round heads of pink blossoms. Then there is the tiny Stone Sandwort (Arenaria balearica) which, though happier on a rock, will succeed in this way, but cannot be depended upon in winter on the level. Many other plants will occur to those who will give the matter a little thought, and I append the following list simply as some help to those who have not had much experience with alpine plants. This list does not pretend to be complete, neither are plants of vigorous habit or which run at the root included; Arabis aubretioides, Aubrietias in variety, Campanula muralis, C. garganica and its variety hirsuta, Erodium chamædryoides, Frankenia lævis, Gaultheria procumbens, which seems to grow almost as well in sun and loam as in peat and shade; alpine Phloxes, Saxifrages, such as the double Meadow Saxifrage, which disappears in early summer; the mossy Saxifrages, such as muscoides, purpurascens, Rhei, and others, and also the varieties of S. oppositifolia and S. retusa; Sibthorpia europæa, numerous Thymes, especially the variety lanuginosa; the Foamflower (Tiarella), Veronica repens and V. prostrata, Viola rothomagensis (Rouen Violet), and the many lovely Tufted Pansies.

Odontoglossum Rolfeae

I am glad to see so much interest among private gardeners in the growing of orchids. One orchid to be highly recommended is the one illustrated on the previous page, Odontoglossum Rolfeae. It is creamy white with many purplish brown spots. It is a strong grower and a free bloomer.

### GRADUATION AT AMBLER

At the commencement exercises of the Pennsylvania School of Horticulture for women at Ambler, Pa., diplomas were awarded to the following young women:

Barbara Booth, Fort Washington; Marjory W. Broadbent, New Haven, Conn.; Elizabeth E. Crellin, Scranton; Mary B. Marryweather, Cleveland; Eleanor L. Mulcaby, Harrisburg; Amy R. Thurston, Litchfield, Conn.; Susan L. Repoard, Savannah; Alice A. Rhodes, Jackson, Mich.; Margaret A. Trimble, Edgewater Park, N. J.

In addition to the exercises by the graduates an address was delivered by Dr. J. M. MacFarlane, emeritus professor of botany at the University of Pennsylvania, who spoke on "Opening Vistas in Horticultural Activity." At the close of the exercises Miss Elizabeth Leighton Lee, director of the school, assisted by the senior class, received the guests and tea was served.

### JANUARY.

To welcome the birth of the New Year the fields are spread with snowy whiteness as far as the eye can reach. The trees stand dark against the horizon. The pinkish brown leaves cling to the oak trees. White birches—the ladies of the forest—shine out from the dark pines and hemlocks. The sun shines brightly under a vivid blue sky and shows the golden and flame-colored twigs of the willows. Then comes a dark day of sleet and rain. The dawn breaks on a world of jewels, the trees are hung with every color of the rainbow which sparkle, scintilate and shine. They dance in the sunshine as plaything for the new born child. The year is born into a world of miracle, of ice and sleet and snow, of sparkling gems and fairy whiteness, beautiful New England with its every varying season.

M. R. Case.

Hillcrest Gardens, Dec. 28, 1920.

Apparently the tendency towards a reduction in wages has reached the nursery trade. It is reported that a hundred men in the employ of Isaac Hicks & Son, of Waterbury, L. I., have agreed to accept a cut in wages from $4.50 to $4.00 a day in order to have work all winter.

## CARNATION GROWERS' PROGRAM

### Plans for the Convention to Be Held in Washington, Jan. 26 and 27.

The American Carnation Society will hold its convention at Washington, D. C., on January 26 and 27, 1921. Headquarters will be at the New Willard where the exhibition will also be staged. The premium schedule has been mailed to all the members and extra copies will be mailed upon request to those who are interested. Classes are provided for the various colors and varieties in both new and standard sorts with cash and medal prizes. Entries must be in by January 16th to escape penalty for late entry. A large attendance is expected and a complete exhibit is desired. Washington offers unusual opportunity for sight seeing aside of the interest of the convention and this meeting should prove both pleasant and profitable to those who attend. Following is a program of the business sessions:

#### Wednesday Evening

President's Address.
Secretary's Report.
Treasurer's Report.
Report of Committee on Grading Carnations, Chas. W. Johnson, chairman.
Report of Committee on Patents for Plants, Chas. S. Strout, chairman.
Report of Committee on Premium List for National Flower Show, S. J. Goddard, chairman.
Miscellaneous Business. Adoption of Resolution to Change the Dues.
Invitations for Next Meeting Place.
Nomination of Officers.
Essay on Using Soil More Than One Season, by W. D. Howard.
Essay on Increasing the Cut of Carnations for Mothers' Day, by Chas. P. Mueller.
Report of Judges.

#### Thursday Morning

Deferred Reports.
Deferred Business.
Selection of Next Meeting Place.
Discussion of Mr. Howard's Essay.
Discussion on Mr. Mueller's Essay.
New Business.
Appointment of Committees.
Election of Officers.
Adjournment.

Immediately following adjournment, the Board of Directors will hold their usual post convention meeting.

On Thursday afternoon the National Flower Growers' Association will hold their annual meeting.

A. J. Baur, Secy.

## George Watson's Corner

**"You in your small corner and me in mine."**

### TO A BUNCH OF CARNATIONS

(The characteristic gift of my good friend John R. Johnston)

Blossoms, where did you come from;
  And the ferns that are between?
Blossoms, whence do your sweets come?
  And what does your fragrance mean?
I come from your Hoosier brother;
  My sweets from the tender heart
Whose gentleness naught may smother
  Though spirit and body part

And your fragrance -I asked its meaning;
  Now what does your perfume say?
Why, that is the love o'erweening
  Of a heart that beats alway
For the sake of his fellow-mortals
  And not for his selfish own.
He waits at your friendship's portals
  And speaks in a winning tone

Blossoms, I hear, I heed you.
  And blossoms, I clearly know
The reason I crave and need you
  To brighten my path below.
I drink of your dewey sweetness
  The breath of your perfume rare.
And revel in life's completeness
  That friends of your giver share.

STRICKLAND GILLILAN.

The above poem was penned by Mr. Strickland Gillilan after receiving a bunch of carnations from the late Mr. J. R. Johnston, whose passing was noted in a recent number of HORTICULTURE. Mr. Johnston, who occupied a unique position in the glass world, was a great lover of flowers, and the poet has given us here three fine verses expressing the charm of the blossoms and the kind spirit of the giver

Joseph Meehan, the famous nurseryman and landscape gardening expert, who passed away recently at Mt Airy, Pa., aged 81, was the father of Charles E. Meehan, late of the Pennock-Meehan Co., and now operating as a wholesale florist in Philadelphia Deep sympathy is extended to him, as to all members of the family.

J. Otto Thilow, of the Henry A. Dreer Company, sails for Porto Rico January 8th, on a well earned vacation. He will return before the spring rush starts in the seed store in Philadelphia.

Frank M. Ross, our hustling retail florist, will sail on the same boat so there will be lots of pleasant company.

# PRESIDENT ROLAND'S GREETING

## A Message of Optimism and Healthful Progress

PRES. THOMAS ROLAND

As President of the Society of American Florists and Ornamental Horticulturists I extend hearty greetings and best New Year wishes to all members of our great Society, and would extend these also to all interested in Horticulture. The profession and practice of Horticulture is the most delightful of all occupations, and lovers of plants and flowers who have the good fortune to be engaged in it have much for which to be thankful.

The outlook for the coming year seems good, although many readjustments are yet to be made in general industry in our country before we may again go on safely and without a danger of violent alternations of "feast and famine." Readjustments will extend into our own industry and we must be ever watchful to see where reconstruction will be helpful, not too conservatively waiting and wishing for a return to "old conditions" which we will never see, and bold to step forward when a forward step will help. There is more lack of progress through inertia or fear than through errors in seeking new ways. It is even nobler to make new blunders than to petpetuate old ones.

The cost of production today is excessively high, but is slowly decreasing, although it will not, apparently, reach the low level of former years. High prices may make a poor market, but on the other hand people love plants and flowers and hardly need to be taught or urged to use them. They only need to learn the many ways in which they may be used, and to be reminded of the joys which come with them. The uncertain period of general readjustment will require more careful salesmanship than during the last two years. Aim for high grade healthy stock, care and economy in production, and fair prices and efficient service. The deflation, now taking place will not be over quickly, and doubtless troubles will come also to our industry, but study, care and attention will carry us through to even greater successes.

### Publicity

One of the valuable things accomplished by your Society was to draw the attention of producers and distributors to the value of advertising. The retailers have spent for advertising—usually locally large sums. This backwardness of other branches of the profession was doubtless due partly because their advertising could rarely be local and individual, while many believed this work properly belonged to the retailers.

At the time producers took up the question they were practically the only great group of producers who were doing nothing to improve the market for their product. Read the advertising in any magazine and see how much is by producers, and the proportion is steadily increasing. Combinations advertising, as laid out by your publicity committee, has been well started, but the firm basis and benefit will crumble away unless heartily supported financially. I have recently attended committee meetings in Cleveland and Indianapolis and I am sorry to say the committee are somewhat discouraged over the slow response to their appeals. They are working heartily for you—help them by quick action.

### Affiliation

I find a fear expressed here and there that the increasing number of special societies may weaken our parent society. I believe the S. A. F. and O. H. will in time become the national clearing house for all of these others, which must frequently work in cooperation with each other, and that many things—like our national advertising campaign for example—will naturally be handled by the parent society. Men belong to more than one

of these special societies, and time and expense of travel is saved when meetings and conventions are held in the same week at the same place. Working separately there would come an overlapping, or a duplication of effort. Organizations would not know what others were doing, and there would be the inability to profit by mistakes and successes. Great shows are better than little ones. In many ways affiliation is an advantage, and the near future should develop some plan for this already much discussed feature.

Fellow members, always remember that the best efforts of your officers and committees come to nothing unless you all press forward with interest and assistance. Write to your officers upon any matter which appeals to you as interesting to the Society. Remember also that any member may consult the following, free of charge, upon any matters where advice is needed, and where they or any of them can be helpful.

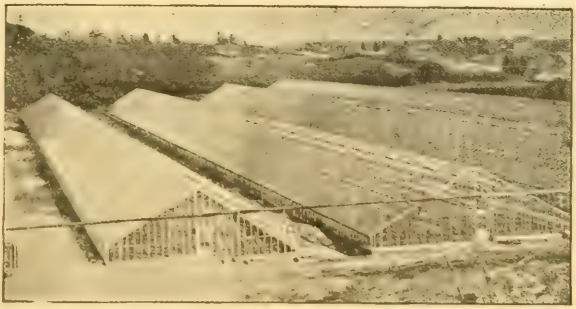
Much has been done for our industry. Much more may be done with your help. I do not doubt that you realize all these things, and that the men to whom you have entrusted the guidance of your organization may feel full confidence that you will march forward in full swing with them.

THOMAS ROLAND, President.

## THE BOUGAINVILLIA.

By S. J. Sherman.



The Bougainvilleas owe their attraction to their beautifully colored bracts and not the unshowy flowers they produce; and it is for this reason that they are cultivated and highly valued. They harmonize well in company with many flowering plants, as their bracts are large and lasting, and as they can be had in succession from Christmas till after Easter they form an invaluable group of decorative plants, though small in number of species.

They are naturally very strong and vigorous growing climbers, some of their canes reaching a length of twenty feet and more. Two of them, however, are manageable and well adapted for pot culture. They are B. glabra and its variety sanderiana. The others, B. speciosa, spectabilis and their varieties are almost unmanageable in pots and are employed as climbers only. Besides that B. Glabra makes a good pot plant, its blossoms are also very lasting when cut and very desirable for this purpose. But its variety Sanderiana, although lacking this quality makes an all around better decorative pot plant.

Bougainvillias are readily propagated by cuttings from half ripened wood, in April or May, and root quite quickly. Under favorable conditions and proper care they should root in fourteen days. Although the cuttings can be made any length, nothing is ever gained by making longer than five or six inches. While they are in the propagating bench they should be kept moist, occasionally syringed and somewhat shaded against the direct rays of the sun.

The soil most suitable for them is a fibrous sandy loam and after they are well established in their pots they should receive all the sun and room available. This is very necessary in order to have the canes well hardened and strong. It is equally essential to remember that they require a rest three or four weeks, before they are put into active growth, applying only enough water to keep them from shrivelling up

## BUSINESS GETTING NORMAL

### Interesting Review of Conditions by David Grillbortzer, Vice-President of the American Carnation Society

"The flower business in Washington during the year just closed," said David G. Grillbortzer, of the Washington Floral Company, vice-president of the American Carnation Society, which is soon to meet in the National Capital, "will average up well when compared with the business of 1919.

"We expected that with the retirement from service here of hundreds of officers of the army and navy and their removal from the city, and with the discharge of thousands of government employees and workers in civilian organizations existing during the war, that there would be a marked falling off in our daily receipts. Apparently, this has not diminished the buying ability of the people, for when our books are balanced I am sure the showing will be satisfactory.

"When I speak of the year being a successful one, I believe I can well voice the sentiments of other florists in this territory. The Washington Floral Company does both a wholesale and retail business and when I say our wholesale business has been exceptionally good it can readily be seen that the business of our customers was proportionately good because of the amount of stock they consumed.

"The future holds for all of us many puzzling situations. This is the period of reconstruction and naturally with falling prices in all lines the florists will not be able to secure the prices that have prevailed during the past few years. I do believe, however, that when our books are closed this time next year the returns for 1921 will not be disappointing.

"Surely, this is not the time for pessimism. We will probably find that our customers will not be falling all over themselves trying to buy our flowers and we will have to go out after business. There is no use getting gloomy over dark prospects for we can consider the little motto, 'Does a hen stop scratching because the worms are scarce,' and keep plugging our businesses.

"As to prices for 1921, looking over cost of production figures, it is very evident that there will be a material reduction as compared with prices for 1919, but they will not approximate the prices charged for flowers at wholesale prior to 1914. When we in the flower business speak about 'getting back to normal' we cannot mean conditions of 1914 for the reason that the elements entering into production are still moving upward. I refer more particularly to coal, water and power. Wages have not decreased and in Washington today there is considerable labor agitation in the flower industry.

---

Garrett Huizing has purchased the interest of his partner William Bjorklumg in the Scioto Floral Co. at Chillicothe, Ohio.

## Men I Like to Meet

R. VINCENT, JR.

When I think of geraniums, R. Vincent, Jr., comes to my mind; and that also applies to dahlias. Mr. Vincent has devoted a lot of time, study and hard work to these two crops, and has made a lasting reputation for himself. No one has done more and in an unselfish way for these two lines than Mr. Vincent. Who is it who knows and loves dahlias who doesn't like to talk with our friend on that subject?

Mr. Vincent is one of the very old timers in our business, well known from one end of the country to the other as a past president of the Society of American Florists, and still actively interested in it, as well as in many of the other societies, particularly, of course, the Dahlia Society. You will find him at all of the big meetings and exhibitions, and always busy, ready to help out in any way that may be possible.

---

## THE MARKET

There is a very even market just at present, with flowers selling in about the same ratio that they come in. Carnations average from 8 to 10 cents, and are fair as to quality. Roses sell reasonably well, bringing 10 cents for 9-inch stems, 15 cents for 12-inch stems, etc. Easter lilies are plentiful at 20 cents, and Calla lilies fairly abundant at $3.00 a dozen. Violets are not plentiful, but on the other hand are not much in demand. Stevia, which was selling slowly a few weeks ago, is now going well, and sweet peas are beginning to come in.

## WOMAN'S NATIONAL FARM AND GARDEN ASSOCIATION

The spirit of Christmas reigned supreme in Horticultural Hall through the three days' market of the Woman's National Farm and Garden Association held on the fifteenth, sixteenth and seventeenth of December. Entering the main hall through a pretty white archway sent in by the Landscape Department of the Breck-Robinson Nursery, we saw at the end of the hall the beautiful flower table to which it seemed as if the owners of all the greenhouses about Boston had generously contributed.

We reached this table through two lines of pretty evergreens, one of which stood at the end of each table on which were displayed the goods which brought country producer and city buyer together.

Close to the entrance door in an arbor of white pine trees was a desk at which information about the Woman's National Farm and Garden Association could be obtained. Of how its work, starting before the World War, had then been quickened into greater activity by the need of women in agriculture till now it is spreading all over the nation, bringing a market for their goods to the women of the lovely country farms and good country products to the people in the cities. During the three days of the Christmas market fifty new members were enrolled, the terms of membership being: annual membership two dollars, contributing membership five dollars, and sustaining membership ten dollars a year. The office of the New England Branch of the Association is at 4 Joy street, Boston. Here information may be obtained about the help the Association gives in assisting girls to go through the State Agricultural College in Amherst by supplying scholarships to eke out their living expenses while there. Also by acting as a clearing station for girls who wish to find good places to work on farms, and by supplying farmers who need such help.

Much of the selling of the products of the farms is done through the women advertising their goods in our monthly bulletin, but the Christmas market brings the consignor and the purchaser together. This is the fourth year that the Christmas market has been held, but the growth of the Association was shown by the size of the market this year.

Opposite the Information Desk was the Basket Table, where the baskets large enough for carrying home the purchases made in the market were ready sellers, especially as opposite to this table was one where ducks, chickens and turkeys were eagerly bought. More cream, eggs and cheese would also have sold at this table.

Next to the Basket Table was one where warm blankets, jackets and caps for babies were sold. Next year this table might be better known as the table for Knit Goods. That grandmother in her warm chimney corner on the farm may see in looking over our lists that there is a need for her busy fingers, and that the children in the cities may be supplied with warm mittens, gloves and caps. The city babies are dainty little creatures and ask for light and delicate colors in their hoods and jackets, light shades of pink and blue. Among the Home Industries more towels and handkerchiefs were wanted.

The Peterborough Handicraft Workers showed the beautiful needle work our New England women do with training and suggestions. In the braided rugs we saw a good use for the tops of old black stockings mixed in with a few dark, rich colors.

At the table for Old Fashioned Home Foods there was a demand for doughnuts, plain cake, gingerbread, bread, biscuits, and plain not sweet pickles. More maple syrup, soft maple sugar and honey in the comb would have sold. More fresh vegetables were wanted. Baskets of onions and of macaroni with recipes for cooking them were quickly bought. In the vegetables put up in glass jars, the smaller the container the more popular they were; pints sold better than quarts and for the two quart jars there was no sale.

One of the most popular tables in the hall was the one for Christmas greens. It was supplied with a great variety of wreaths, two of the most popular being a light one of two or three laurel leaves around the ring, and a tiny one of partridge-berries or Mitchelta repens suited to hang in my lady's automobile.

In general directions for another year, cards giving information about the association could well be distributed from the different tables. Consignors need more explicit directions as to how to label and send their goods. More pasteboard boxes for packing the goods were needed, and trucks were better than limousines for sending the purchases home.

Hillcrest Gardens,
Weston, Mass.

## NEW YORK TO WASHINGTON

The Transportation Committee of the New York Florists' Club has selected the Pennsylvania Railroad in connection with the gathering together of a party for attendance at the meetings of the National Flower Growers' Association and the American Carnation Society to be held in Washington, D. C., January 26 and 27.

Train will be taken at 12.15 A. M. Wednesday, the 26th, arriving in Washington at 6.30 A. M. Those who travel will have the privilege of boarding the sleeper at 10 P. M., the 25th, and it will not be necessary to leave the train at Washington till 7.15 A. M.

The rates are as follows: Railroad ticket, $8.79; lower berth, $4.05; upper berth, $3.24; compartment containing upper and lower berths, $11.34; drawing room for two or three, $14.58.

Reservations are being received and so that proper arrangements may be made for necessary accommodations, will all those who plan to join the party communicate without delay with C. Lowther, Box 100, Times Square Station, New York City.

---

**Confidence**

Although the business situation has not been just what everybody might wish for the past few months, it is significant that throughout the trade there is a general feeling of confidence. This is well, for it means that florists and those in allied trades are laying their plans for a good business season. Naturally caution has been the watchword of the trade because of limited credits and declining markets, but at the same time there has come a cutting down of surplus stock in many lines which will have to be replaced later, which in itself will stimulate business. Seedsmen say that contract orders are better than expected, which is certainly a good indication of brighter times ahead. L. H. Vaughan, of Vaughan's Seed Store, Chicago, who is in a position to feel the pull of the market, is quoted as follows:

"Two of the permanent results of the war, we believe, are increased emphasis upon the desirability of home ownership, and widened interest in gardening. We expect as a result this spring a greatly stimulated suburban development and the cultivation of home gardens to an extent unsurpassed in the best war garden year.

"The fact that industrial conditions will be more nearly normal will be favorable to our business, for the absence of overtime work and bonus wages will not only give workingmen more time to spend in gardening, but will make the savings of the home garden attractive to them."

---

**Advertising**

"One winter night, several years ago, Thomas A. Edison stood gazing upon the vast furnace into which a devastating fire and a winter wind had turned his great plant, worth more than a million dollars.

"Morning would find the plant a ruin—a staggering loss. Yet Edison—then at an age when many men seek the fireplace corner—smiled. His associates, stunned by the loss, asked his thoughts. He replied that he was already planning the new plant. And a greater and better plant arose out of the ruin, because Edison had courage—and vision.

"While the business men of little courage and vision are mourning over the temporary losses of the beneficial and necessary deflation period, business leaders' thoughts have been busied with plans for the bigger business ahead. They are insuring the future of their business through the stabilizing and demand-quickening power of advertising. They are not the type of men who need the warning in Bradstreet's impartial report on business failures in 1919—that 84 per cent of such failures were non-advertisers."

The above quotations are from an announcement put out by Wood, Putnam & Wood, specialists in advertising and selling. They are well worth pondering.

---

**American Rose Society**

We feel that the American Rose Society has made a very good move by opening a permanent office in Philadelphia and that the new secretary, Mr. John C. Wister, will do much to increase the influence of the society throughout the country. Certainly the members of the society will appreciate the courtesy of the Pennsylvania Horticultural Society in making the new office available. If the plan recently suggested that the American Rose Society visit the Portland, Oregon, rose festival next year as a body is carried out, the occasion certainly will be a noteworthy one. Mr. Currie, of Portland, who urged this plan, is a booster not only for the Oregon metropolis, but also for the Rose Society itself. With Mr. Pennock he is to arrange for a private excursion train for the members of the society in June, 1922.

The question of affiliating with local horticultural societies has long been agitated, and perhaps the plan adopted will prove as successful as any that has been suggested. It is to be urged upon local societies to join the society in a group, and for every ten to fifty members who do this, the sum of fifty cents per member is to be returned to the local organization to be used in encouraging rose growing in the community. If the group numbers from fifty to a hundred, seventy-five cents a member will be paid back, and when the group is over a hundred the amount paid back will be a dollar. Many schemes have been suggested, but this seems to be a workable one, and it is to be hoped that many local organizations will concur in it.

It is unfortunate that the Department of Agriculture is not in a position to properly disseminate the wonderful new roses originated by Dr. Van Fleet, but under the circumstances possibly the Rose Society will be able to do this work. Just what methods can be adopted constitutes a serious question, but with a special committee considering the matter, it is possible that some program can be worked out.

Certainly all rose growers will anticipate with delight an opportunity to get possession of these Van Fleet varieties.

It is expected that the Society will have a prominent part in the big rose show to be held in Boston in April of this year. Already two gold medals have been offered by members of the trade in the name of the American Rose Society, and probably the number of medals will be increased in the next few months. With a membership of 2,500, the Society is in a position to play a prominent part in the horticultural development of this country, and it is not likely that the advance in membership dues from $2.00 to $3.00 will materially effect the growth of the organization.

The Rose Annual is proving a great success, and it is doubtful if the additional 3,000 authorized for this year will be sufficient to meet the demands of those who desire copies.

**HENRY A. DREER, Seeds, Plants, Bulbs and Supplies, 714-716 Chestnut St., Philadelphia, Pa.**

### HOLLAND BULBS

John Van Leeuwen, of Sassenheim, said to be the largest grower of tulips, hyacinths and daffodils in Holland, is making a tour of this country. He is quoted as follows in the New York Sun:

"'Hundreds of American women interested in flower growing watch the latest styles in tulips as closely as any leader of fashion ever did the Paris creations in hats and gowns,' said Mr. Van Leeuwen. 'The result is that the United States is our best customer and we make great efforts to keep up to the demands. Tulip culture is the principal industry along our western coast, the old sand bars which were thrown up by the North Sea many years ago seeming to provide the only suitable soil in the world for their propagation.

"'A statement was current during the war that we had found a way to make bread from tulip bulbs, but this was not true, and the first big crops withdrawn from export were fed to the livestock or used for starch, while much of it went for fuel.'

"Mr. Van Leeuwen has been coming to the United States to distribute his own and his neighbors' new tulip 'styles' for the last twenty-one years, while his father, forty years ago, was the first traveling salesman for the industry to come here."

### AUGUSTUS P. CALDER

Augustus P. Calder, for many years a Boston florist, and also a well known historian, died recently at his home in Brookline, at the age of 83. Two score years or more ago he had a florist shop in the old Hotel Boylston, now the site of Hotel Touraine. Mr. Calder was identified with many interests, and was prominent in various Masonic bodies.

J. C. Kellen has purchased the Londonburg Greenhouse equipment at Valparaiso, Ind., and moved it to Hobart, thus practically doubling its greenhouse capacity.

**The New England Nurseries Co.**

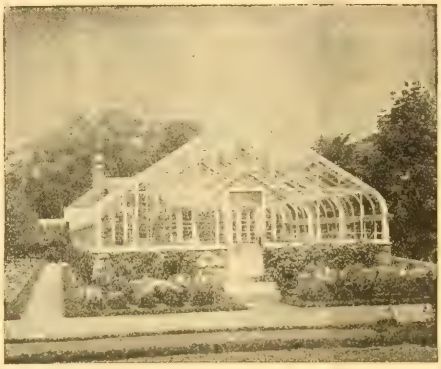
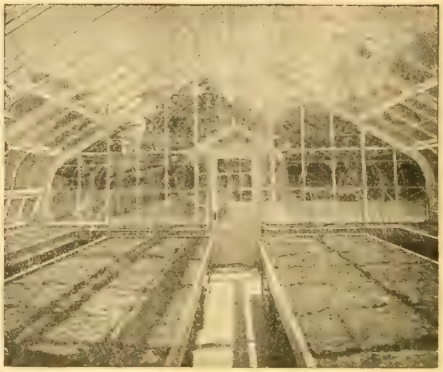
**Bedford, Mass.**

**MASTICA**



**For Greenhouse Glazing**

**USE IT NOW**



**F. O. PIERCE CO.**

12 W. BROADWAY NEW YORK

Mastica is elastic and tenacious, admits of expansion and contraction. Putty becomes hard and brittle. Broken glass more easily removed without breaking of other glass an occure with hard putty. Last longer than putty. Easy to apply.

As for attractiveness, it has the 18 footer backed off the boards.

See the fine roomy house it is—4 benches, 3 walks.

# Getting Back Again to that 24 foot House Argument

Briefly by adding 6 feet to the 18 footer, you gain another. None of the benches are so wide that it is hard to work them. You have two instead of one, for your taller growing thing. The higher ridge, gives you improved ventilation equalization.

Of course we have, like all greenhouse builders, sold a lot of 18 footers and still sell many more of that width, and will be glad to sell more. However, it seems to us it's only fair to point out to you the advantages of the 24 foot one, and then it's up to you to come to your own conclusions. Whichever width you decide on, you will find our Semi-Curvilinear Construction has many distinct advantages, not the least of which is the extra head room on the sides.

Furthermore, an 18 foot house costs more in proportion, and you get less, which is only another way of saying the 24 footer is the cheapest.

## NEW ENGLAND FLOWER GROWERS.

### Annual Meeting and Banquet—S. J. Goddard Elected President.

There was an enthusiastic gathering at the City Club when the Flower Growers' Association of New England held its first annual meeting and dinner. There was a good attendance, and the general feeling seemed to be that the association was entering upon a year of high prosperity. Pres. Stickel made a very efficient presiding officer, and rousing speeches were made by three of the best known growers in New England, Wallace Pierson, of Cromwell, Ct., Thomas Roland, president of the S. A. F., and William H. Elliott, of Brighton.

The election of officers resulted as follows: President, S. J. Goddard, Framingham, Mass.; vice-presidents, Thomas Roland and Wallace Pierson.

Directors for two years, Herman Barsh, Waverley; Allan Peirce, Waltham, and William Sim, Cliftondale. Directors for one year, William Stickel, Lexington; George Butterworth, Framingham, and Peter Fisher, Ellis.

At a meeting of the directors held last Wednesday evening, George Moyse, of Waltham, was reelected secretary, and Frank Edgar, of Waverley, treasurer.

The following delegates have been chosen to represent the association at the meeting in Washington, January 26: Messrs. Goddard, Moyse and Sim. Other members who will be present are Allan Pierce, vice-president, Wallace Pierson, treasurer of the National Growers' Association, and Thomas Roland, president of the S. A. F. It will be seen that New England will thus have a distinguished representation at the meeting

## CONNECTICUT GROWERS ORGANIZE.

The flower growers of Connecticut are showing much enthusiasm over the organization of a branch in that state. At a recent meeting held in Hartford, about thirty growers were in attendance, representing not only that city but many other cities in the state. Messrs. Allan Peirce, and George Moyse, secretary of the New England Growers' Association, were present to help perfect the organization, and a committee, with Mr. Ryan, or Hartford, as chairman, was appointed to draw up a constitution and by-laws.

Vol. XXXIII JANUARY 25, 1921 No. 2

## THE TALK OF THE TRADE

The rose, Frank W. Dunlop, is receiving a warm welcome at the Budlong Rose Co.'s plant, at Auburn, R. I. They planted it in sufficient quantities last year to give it a thorough try out, and as I saw it growing there a few weeks ago, it appealed to me as a mighty fine variety. I would place it in the class of good, solid, bread-and-butter roses. In spite of a lot of cloudy weather which we have had this season, together with soft growing conditions, it is absolutely clean from mildew or spot, and is producing blooms liberally. It has a peculiar habit, however, of throwing up quite a quantity of shoots that come blind, but if these are left and not pinched the next break seems to follow along with a bud giving a good long stem. As grown by Budlong they all seem to be stiff enough to hold the flowers erect. Of one thing you may be sure, and that is, that the Dunlop rose is one of the good paying varieties or the Budlong Rose Co. would not plan to plant in such large quantities as they are this coming season.

I also found that they are erecting four new rose houses, and the construction is along their own lines, being very simple and extremely strong. These are only medium width houses, not very high, but as light as day, and I don't believe any snow storm could ever be heavy enough to damage them.

---

Crotons for some time back have been in lower supply in small sizes than I would expect. There is always a good steady demand for 2¼ inch stock, but the number in the past has been rather limited. It is too bad that the smaller florists don't find it possible to get a more steady supply of mixed Crotons, as there are so many uses for this plant. It is not a hard crop to handle, and when they can be had at a little lower price many of them will be used.

---

Anders Rasmussen, the florist of New Albany, Ind., recently gladdened the hearts of his fifty employees by giving them a cash bonus. It is pleasant to find employers in the the trade taking such an interest in the welfare of their people. It is the kind of thing which counts in the long run. Moreover, it indicates in this instance at least a good year's business, which no doubt has been made possible largely through the cooperative and hearty efforts of the employees. The bonus money represented all the earnings for 1920 above 6 per cent interest

House of Crotons at the Dreer Establishment

on the capital invested, based on a pre-war valuation, with allowance of a reasonable amount for depreciation. The lowest bonus was $260 for employees who had been on the pay roll for one year, and went as high as $560 for the oldest employee in point of service, a man who had been with the concern for 19 years. Mr. Rasmussen is well pleased with his plan, and says that the same profit sharing scheme will be carried out in 1921. His plant is one of the largest in the middle west, having 300,000 square feet of glass, and shipments are made to points several hundred miles away.

It would be pretty hard for any one, no matter how well informed on dahlias, to pick out a list of varieties for the commercial florist which would please everyone. The commercial florist finds certain points which are necessary for all dahlias. In order for a variety to be of good use to him it must have a reasonable length of stem and always must be strong enough to hold the flower erect. The foliage must also be heavy, closely placed on the stem, and carried up close to the flower. Of course it must have freedom of bloom. A variety with those qualifications, with good color and form, is what the commercial florist needs, and the dahlia in his hands is used for both cut flower purposes and funeral work. It often occurs to me that the dahlia is not sufficiently appreciated.

While most anyone acquainted with the dahlia would be able to make changes or add to the number of varieties which I may mention, I don't think that I am very far wrong in selecting just a few which follow as good varieties for commercial work. I pay no attention to those for exhibition purposes, but think only of the dahlia as being of use, as I said before, for cut flowers, vase work or funeral work.

Among the cactus varieties, and really that is the type which I think the most of, I always place Kriemhilde, Attraction, Bianca, Ella Kramer, Helene and Margery Castleton as good pink sorts to depend upon. Besides these in the cactus type there is Perle de Lyon, Winsome and Avalanche as good whites, J. H. Jackson, Kalif and Tom Lundy as good scarlet and crimson ones. I always think of Stern, T. G. Baker and Volker in the yellows. There may be better ones, but I have seen them do very well in so many places that I have come to believe in them.

In the peony type Glory of Baarn, pink, Queen Wilhelmina, white, Latona, autumn shades, and Madonna, delicate lavender-pink, are all good.

In the decorative type I am going to place Mina Burgle at the head. I have heard many say that this was the finest dahlia in any color or any type that has yet been put out. Mr. Charles Baum, of Knoxville, Tenn., who is an authority on dahlias, told me last winter that that was his one best bet on them all.

Besides Mina Burgle, Jeanne Charmet, Frank A. Walker and Delice are fine pink varieties.

And as companions to go with Mina Burgle in the red and crimson class among the decoratives, I don't think we need much more than Jack Rose and Souv. de Gustave Doazon. I don't think I would be fair to leave out Mme. Van Den Daele from the pink ones in this class, and as a yellow to top the list I will name Clifford W. Burton for all round work. Princess Juliana is a good white for cutting.

In the colossal type Mrs. Roosevelt, pink, W. W. Rawson, lavender, Fireburst, red, Mme. Marze, white, and Yellow Colosse are all fine ones.

I wonder if there is a prettier show variety than that beautiful pink one, A. D. Livoni. It has always appealed to me. Besides this Acquisition is good in the lilac shade, and for yellow, both Golden Age and Primrose Dame are good, and Storm King a good white. Stradella is a good purple crimson.

For commercial use I don't think so much of pompons, but we must have some of them, and I like Elfin for yellow, Snow Clad for white, also La Petite Barbara, the little white one. Little Belle is a good rosy pink, and I think Madeline could well be included in this list. It is a very good sort, and has very pretty shading, being pale yellow with lavender tips.

Now, as I have said before, there are loads of other good varieties, and anyone who knows dahlias could pick out a fine list. It is almost like picking out an All-American football team. There is plenty of good material, and the experts fail to agree, but the above is what I think are sorts that a grower won't go wrong on.

## WOODRUFF GETS VERDICT

On January 12, 1921, the jury in the Suffolk Superior Court at Boston gave a verdict of $2,503 to the plaintiff, S. D. Woodruff & Sons, of Orange, Connecticut, against the defendant, Jay G. Feldstein, of Pittsburgh, as damages for failure by Feldstein to accept delivery and pay for 60 tons of dried peas in November, 1917. Curtis Nye Smith, attorney for the Seed Trade Association, was plaintiff's trial attorney.

## MASSACHUSETTS NURSERYMEN

The Massachusetts Nurserymen's Association will have its annual meeting at Horticultural Hall, Boston, Feb. 8. Following a dinner, the members will attend the lecture by J. Horace McFarland. Mr. D. A. Clarke of Fiskeville, R. I., will address the afternoon meeting.

The Northern Chautauqua Florist Club, at a recent meeting in Fredonia, N. Y., elected the following officers: President, Fred Sahle; vice-president, Frank Kusneske; secretary-treasurer, Charles Schwan; trustees, John McGrath, Ernest Rozumalski and Frank Thies.

## KEEPING DAHLIAS THROUGH THE WINTER

By J. K. Alexander

The storage of your dahlia clumps is very important, because if they decay or dry up they become worthless.

Many people do not understand how to care for them, so I will outline the way I handle mine.

I commence harvesting as soon as the foliage is killed by a severe frost. My clumps are packed in large bins, each clump up-side-down. The object of having them up-side-down is to allow the water substance in the stalk to run out. I have found that many varieties commence to decay if this watery substance remains in the stalk. If the stalk is too long and the clumps are up-right, the watery substance collects at the base of the crown causing decay, which many times destroys the entire clump.

Where a small number of clumps is to be stored, I would recommend that they be packed in a barrel or case, the inside lined with paper, and of course, the clumps packed away carefully up-side-down. The lining with paper prevents the free circulation of heat and air sustains a more even temperature. I have found that it is the circulation of heat and air that causes dahlias to dry up. An even temperature of between 40 and 50 degrees is best.

In heated cellars, the clumps should be placed as far away from the source of the heat as possible, and the amount of paper lining increased to prevent the circulation of heat. It is well to cover the top of the barrel with paper, the same as the sides were lined.

Dahlias keep during the winter best in clump form, so it is better to wait until planting time before dividing. Then, too, in the spring, eyes commence to show, which help in separating.

It is well to look at your dahlias, every three or four weeks during the winter, to see if they are keeping well. If mould and decay is noticed they are too damp, and greater circulation is required; if too dry, and the tubers commence to shrivel, they should be covered more. If shriveling too much, they can be sprinkled with water, but if this is done, care must be taken not to use too much water, which will cause them to sprout too early.

# RAMBLING OBSERVATIONS OF A ROVING GARDENER

When the gladiolus growers who belong to the National Association meet at St. Thomas next fall, they will find an innovation awaiting them. St. Thomas, which is a little Ontario city of only 18,000, has made a remarkable name for itself through the efforts of its Horticultural Society, under the presidency of Dr. Frank E. Bennett, who had the office of president wished upon him some eleven years ago, but has made a record at the job which has won widespread fame for St. Thomas, which has now come to be known as the Tulip city of Canada.

But to get back to the Gladiolus convention. It will be the first time that the National Society has ever met outside the States, and Dr. Bennett conceived the very unique idea of having the flowers growing in the fields where they can be seen at their best. He didn't know how the growers throughout the country would take to the plan, but began sending letters broadcast, and the result has been all that he could wish. Almost all of the prominent members of the gladiolus fraternity have sent, if not hundreds, then scores of bulbs to be planted. Even Mr. Richard Diener, in far away California, has made it possible for Dr. Bennett to grow several thousand of his remarkable "glads."

As it happens, two or three acres of land adjoining the exhibition building are available, and it is here that the planting will be done. Every effort will be made to prevent any confusion or mixing of the different growers' contributions; and if the clerk of the weather is reasonably considerate, the flowers should be in full bloom at the time of the show. Of course there will be cut flowers in the hall in the usual way, but they will be cut to a large extent from the adjoining fields, so that they will be at their best. Moreover, it will be possible to go out into the plots and study the plants themselves. This novel plan should work out to the advantage of commercial growers as well as those who handle "glads" simply as a hobby.

Dr. Bennett came to Boston and addressed the Horticultural Society at the inauguration of President A. C. Burrage. He had a number of slides showing what had been done for the beautification of St. Thomas, and aroused no little enthusiasm by his description of the means by which the Horticultural Society of that city was able to show a membership of almost 2,000.

Dr. Bennett laid much stress upon the value of publicity, a matter which is worthy of the attention of similar societies in other places. He said that in St. Thomas the society carried an advertisement in the local papers on every day, that they were issued. These advertisements were kept timely, and in themselves did much to maintain the interest of the public. Then the society had a perpetual display of flowers in the window of the leading jewelry store, there not being a day in the year when it was not represented here by a single choice bloom or by a collection of flowers.

Dr. Bennett also spoke of the society's cooperate work with the churches, and remarked that a St. Thomas minister never thought of going into the pulpit without having a boutonniere in his buttonhole.

At the same meeting Secretary Thomas, of the Rhode Island Society, gave a rattling talk on the work which was being done among the boys and girls in the neighboring state along horticultural lines. Mr. Thomas is an excellent speaker and had a fine set of slides.

---

I cannot pass by the meeting of the Massachusetts Horticultural Society at which these addresses were given without making mention of the unusual character of the reports. Usually on such an occasion the officers make reports of a cut and dried character which have no particular point. In this instance, however, at least two of the reports were exceedingly frank, laying stress upon the omissions of the exhibitors and the faults of the shows, as well as on the good features of both. It is quite possible that everything which was said by chairman Allen will not meet the approval of some other members, for his criticism extended even to the display of orchids at the big show in the spring. Be that as it may, the fact that he was willing to voice his opinion at a public meeting like that was significant. W. N. Craig also spoke very frankly in his report, stating that the failure of the Society to have more small shows and to make a greater feature of vegetable and fruit displays was reacting upon the organization and was against the best interests of the society in its relation with the general public.

---

The effects of the Horticultural Board's plant embargo are constantly being seen. An instance has just come to my attention. Certain private gardeners have desired to obtain Tigridias and Montbretias, two bulbs of great value in the garden. Until very recently these bulbs could be obtained freely, but now I find it almost impossible to locate any of them. The seedsmen said frankly that they could not get the stock, and had stopped quoting these bulbs. This is part of the embargo which arouses the ire of the home garden maker, and added to the many other unpleasant conditions resulting from the Board's drastic ruling, will go far towards inspiring a

Chinese Woolflower

protest of such volume that those in authority at Washington must heed it.

I find that a good many novelties in the flower lines are being put on the market this year. They are largely in the nature of annuals, and among the most interesting are several new varieties of Celosia, popularly known as Chinese Woolflower. This is the plant which John Lewis Childs popularized, and Mr. Childs is responsible for the new varieties, which include yellow, pink and red kinds. When this Celosia is properly handled it makes an excellent bedding plant, even though it lacks somewhat in refinement. Probably the new varieties, particularly the pink, will be received with much favor by the public.

### NASSAU COUNTY SOCIETY

Seven petitions for active membership were received at the regular meeting of Nassau County Horticultural Society, Glen Cove, L. I., and J. D. Arentshorst of Jersey and Peter Morrison of Oyster Bay were elected to active membership. The exhibits were judged by Charles Parr, John Hyster and Hector McDonald, who awarded 1st to Frank I. Johnson for 25 string beans, and a Certificate of Merit for a pot of Cypredeidium Frank O. Johnson had on exhibition. James McCarthy was presented by President Noonan with the Stumpp & Walter Cup he won at the Mum Show with 12 varieties of vegetables and Peter Smith the H. L. Pratt Cup, won at the same show with table decoration. The Society will hold its annual dinner late in March and President Noonan appointed Ernest J. Brown, Ernest Westlake and Thos. Twigg to make the necessary arrangements. James McCarthy and Joseph Adler were named to fill the vacancies in the Board of Directors. The Tulip Show will be held in May. John T. Johnston gave a short talk about his recent trip to Scotland. Exhibits for February 9th meeting, 50 single violets, 12 mixed roses, 3 heads of lettuce and William Robinson's special, 12 mushrooms.

ARTHUR COOK, Cor. Secy.

# NATIONAL ASSOCIATION OF GARDENERS

President Craig has appointed the following directors for a term of three years: William Gray, Rhode Island; William Hertrick, California; Albin Martini, Iowa; Thos. Hatton, Connecticut; Thomas W. Head, New Jersey; Robert Weeks, Ohio; W. H. Griffiths, Michigan. Montague Free, New York, was appointed to succeed George H. Pring, Missouri, whose term expires 1923. The general committee for 1921 convention (to be held in New York City), is Alexander Michie, Locust Valley, N. Y., chairman; J. W. Everitt, Glen Cove, N. Y.; George R. Hale, Oyster Bay, N. Y.; James Stuart, Mamaroneck, N. Y.; John Canning, Ardsley, N. Y.; William Graham, Tarrytown, N. Y.; M. J. O'Brien, Mt. Kisco, N. Y.; A. Bieschke, Noroton, Conn.; Joseph Tansey, Tuxedo, N. Y.; William Brown, Morristown, N. J.; William H. Waite, Rumson, N. J.

The committee on training young gardeners is M. C. Ebel, New York; Montague Free, gardener, Brooklyn Botanical Garden, Brooklyn, N. Y.; George H. Pring, horticulturist, Missouri Botanical Garden, St. Louis, Mo.; H. Ernest Downer, horticulturist, Vassar College, Poughkeepsie, N. Y.

The committee on Quarantine 37 appointed by President Jensen last year consisting of W. N. Craig, Massachusetts and M. C. Ebel, New York, will be continued.

President Craig in his annual message urges that co-operation should be the association's watchword. It should co-operate with similar organizations, either private or commercial as its interests run on very similar lines, and many of the association's problems are those of other organizations also. He feels that the association should co-operate in every legitimate way with other bodies, aiming to advance horticulture, repressing existing injustices such as Quarantine 37 has caused, and handling other problems where individual efforts might be unavailing, but where in union there would be strength.

President Craig refers to the Plant Quarantine committee which has been actively engaged in a quiet way to bring about needed changes, and hopes in the very near future to make an important announcement of what has been accomplished. He states that the outlook for modifications are certainly brighter than they have been at any time.

There is every assurance that the present year will see the movement to interest young men in the profession of gardening well under way. Two of the foremost estates in the country are now preparing to receive a number of young men where they will have opportunities for both practical and theoretical training, and if plans now afoot materialize, the association will have a school of gardening started by one of the largest hortcultural institutions of this country where young men after two to three years' training on an estate can secure a year or two of scientific training to help round out their work.

PRES. W. N. CRAIG

In the campaign inaugurated at the St. Louis convention against the Sign Board nuisance, the committee has been somewhat disappointed in the lack of interest shown by several organizations that promised to co-operate if the gardeners' association took the initiative. The garden Club of America has indorsed its action and has voted its co-operative support. An active national campaign to bring about an abatement of this national nuisance along our highways will be started very shortly.

The Service Bureau, Mr. Craig says, is becoming nationally known, and positions have been filled not only in the East, but in West, Middle West and South. There is no doubt that country estate owners are recognizing the association as the source from which they may obtain their effiicient and trustworthy gardeners.

President Craig directs attention to the next convention which is to be held in New York City in the fall and asks members to make plans for their vacation at that time, and come to the Empire City, which is sure to extend a cordial welcome.

### Charges Sustained

A committee of the Executive Board composed of Peter Duff, Thomas Proctor, Robert Williamson, J. W. Everitt and Joseph Tansey met at the office of the association in New York on January 10 to act on charges filed against H. L. Crane, recently superintendent of Hubert T. Parson's estate, Shadow Lawn, West End, N. J., of making false statements and submitting a bogus copy of reference in his application to the Service Bureau for a position. The evidence presented to the committee duly substantiated charges made. Crane, who was invited to be present at the meeting, did not appear to defend the charges against him. After careful deliberation, the committee voted unanimously to expel him as a member of the association.

## NEW ROSES

The following varieties of Roses have been offered for registration in The American Rose Society:

Name—Miss Amelia Gude.

Class—H. T. Forcing.

Parentage of Rose—Columbia x Sunburst.

Description—Habit of plant very vigorous upright. Character of foliage—very handsome dark green. Freedom of growth and hardiness grows freely, hardiness not tested. Flower—medium size. Color—deep yellow center shading to cream. Form—outer petals reflexing. Fragrance and bud—moderate fragrance, long pointed bud. Petalage 35 to 40. Freedom of bloom and lasting quality—very free, good keeper.

The rose is similar to Sunburst, but is different in free winter blooming habit and superior for the following reasons: smaller bud, making it ideal for basket and corsage work. Signed by Fred H. Lemon & Co.

Name—Angelus.

Class—H. T. Forcing Rose.

Parentage of Rose—Columbia x Ophelia.

Description—Habit of plant—Vigorous upright. Character of foliage—dark green, free from disease. Freedom of growth and hardiness—Free, hardiness not tested. Flower large and full. Color—white, cream tint at center. Form—similar to Premier but higher center. Fragrance and bud—moderate fragrance. Petalage—40 to 45. Freedom of bloom and lasting quality—free, good keeper.

The rose is similar to Kaiserine Vic. Aug. Vic, but is different, being more double and superior for the following reasons: blooms in winter, keeps longer after cutting. Think will ship well. Signed, Fred H. Lemon Co.

Name—Rotarian.

Class—H. T. Forcing.

Parentage of Rose—Ophelia Pollen, parent not known.

Description: Habis of plant—Vigorous upright. Character of foliage—dark green, red tips. Freedom of growth and hardiness—free growth, hardiness not tested. Flower—large and full. Color—bright cherry. Form—full-high center, reflexing outer petals. Fragrance and bud—moderate fragrance, long bud. Petalage—35 to 40. Freedom of bloom and lasting quality free, keeps well.

The rose is similar to Frank Dunlop, but is different in habit of growth and brighter color, and superior for the following reasons: free from mildew, strong stems, color does not turn blue. Signed by Fred H. Lemon & Co.

If no objection to such registration is filed with the Secretary of the Society within three weeks after this publication, the registration will become permanent.

JOHN C. WISTER, Secretary.

## SHALL SEED STORES SELL FLOWERS?

### A Growing Disposition to Add Cut Blooms as a Side Line

Shall seed stores go into the cut flower business? That is a question which is receiving attention in the trade just now. Many seed stores are already handling nursery stock and some of them believe that flowers can be added to advantage. The Seed World of Chicago presents the case as follows:

"Installation of an ice box and a work table practically covers the initial investment for those who wish to give the cut flower department a trial. The addition of this line will do much to utilize the labor that usually goes to waste during the dull period from the end of June until the first of February.

"Two of the big sale periods in the florist trade comes during this dull period, that is, Thanksgiving and Christmas. Most seedsmen have noticed how a few plants in the window will call favorable comment among their trade, and one of the most notable values in the addition of this line is the attractiveness it will lend to the seed store window. Flower seed and bulbs can be displayed side by side with their products, and will result in an increased sale of the former in addition to the profit that is derived from the latter.

"Those who look with disfavor on this plan, may urge the necessity of skilled help in the arrangement of bouquets and designs, but this is an objection that can be easily overcome. Wholesale cut flower houses are always willing to aid the beginner and usually have in their employ men who are very willing to show the rudiments of the business to interested parties. Any one possessing taste can, with very little practice, arrange flowers in a manner that will be very pleasing to the average customers. As one old florist said, 'The more carelessly flowers are thrown together the beauty of the bouquet increases.'

"To those seedsmen who wish to make this addition on a little larger scale, the supply houses offer equipment that will make their stores a place of distinction and beauty. On a recent visit to the A. L. Randall Co. we noticed outfits for the cut flower department that left nothing to be desired in the way of design and utility."

Everette R. Peacock of Chicago is a seedsman who has added a cut flower department with marked success. The color his windows lend to that portion of Milwaukee avenue marks his location for every passer-by.

# DISCUSSES PLANT EMBARGO

## President Burrage of the Massachusetts Horticultural Society is Installed

Mr. A. C. Burrage, the new president of the Massachusetts Horticultural Society, took office January 8, on which occasion he made an address which was listened to with sympathetic appreciation. He said in part:

This Society, older than the Royal Horticultural Society of England and only twenty-five years younger than its predecessor, the Horticultural Society of London, has a record and reputation excelled only by the Royal Society.

Years ago, on my first visit to Europe after a boyhood spent among the wonderful wild-flowers of California, I first learned to know orchids—exotic orchids—and to love them with an admiration which has never lessened. Twenty years ago when I first began to have them in a conservatory, they fascinated me still more, and when, a few years ago, I was fortunate enough to be able to secure them in quantity and variety and to give them the greenhouse care they deserved, they responded nobly and gave me back a rich reward. Still I was not satisfied, because my joy was too much like that of the miser over his gold, and I resolved that others should some time have a chance to see them as I saw them and to know and appreciate these most beautiful of the products of the vegetable kingdom. But my real motive was that the people of this community should get a clearer realization that this country does not and cannot produce, except under glass, any of these wonderful flowering plants so rich in form and color and in romance.

So, during the past year, you have had, throughout the year, as promised at the beginning, monthly exhibits of orchid plants as they came into flower throughout the different seasons. And nearly fifty thousand individuals have seen, studied and enjoyed them. Slowly, unconsciously, but with ever increasing force, a new life has come into the attendance at our hall—a renaissance of the spirit of our forefathers, who, in their love of plant-life, founded this society and within its home exhibited the best they had.

How many visitors to these exhibits realized that every one of these scores of genera and hundreds of species of plants came from without the borders of this country and that not one was native to the United States. That all of these plants were imported into this country—every one foreign, that is, exotic?

A. C. BURRAGE

Many consider this society an aggregation only of scientists and specialists. This is not so. Most of us are amateurs, many are cultivators, and some are artists in arranging Nature's plants in artistic groups.

But we all have one trait in common—our love for the beautiful. We are all lovers, true lovers of the beautiful in form and color; and in this we recognize no nationality, no artificial boundary, no political demarcation, and we believe we have an indefeasible right to secure the finest natural products of the whole world, provided our use of them injures no one.

We believe the United States Government should protect, so far as it can, the agriculture and horticulture of this country against the introduction of injurious foreign insects and plant diseases, and we favor a reasonable quarantine for this purpose. But we protest against total embargoes and regulations which are, in effect though not in terms, embargoes, and which unnecessarily impede the progress of horticulture in this country.

Quarantine 37, issued under the provisions of the Law of 1912, provides that certain plants may be imported only under a license from the Federal Horticultural Board and requires such plants before delivery to the owner to be sent to Washington for inspection and treatment. This makes it difficult on account of excessive and unnecessary cost and injury to the plants, to import such plants; and if this quarantine is allowed to stand as at present, comparatively few rare plants will in future be imported into this country. Our society is earnestly engaged in the movement to secure alterations to these arbitrary and drastic regulations and we expect this year to make substantial progress in this direction.

To secure the best results it is not enough to do what we can do easily. We must do many things which can be done only with difficulty. To progress we must, from time to time, secure new species and varieties from which to hybridize and make new creations. We must select, and select the best, not only of this country but of the entire world. We must secure not only species and natural hybrids but also artificial hybrids, and this regardless of whether they come from Madagascar, England, Belgium, Siberia, or elsewhere. We must mate not only similar with similar, species with species, but genera with genera.

If in 1820 our forefathers thought that in this country with its virgin fields and forests and their own limited funds and transportation facilities, it was necessary continually to procure exotic plants, what shall be said of us of the present, now become the wealthiest and greatest of all civilized countries, the creditor nation of the world, the Mecca of all emigrants? Shall it be said we are heedless of the morrow—that we have no thought of the future or of our obligations to the millions of people we allow to come here?

Is it enough to take, if we can, our alien immigrants to our libraries and ask them to look at the pictures and descriptions of rare and beautiful exotic plants? Is it enough to send

Wholesale Plantsman

Bulletin Building PHILADELPHIA

them a cut flower when they are ill in hospitals? Is it not better to show them the flowering plants in our exhibitions and in our gardens?

Which makes for the greater refinement of the human being: the brick walls of apartment houses and hospitals, or beautiful grounds like our Common, our Public Gardens, and our surburban estates? These foreigners come very largely from the crowded and impoverished countries of Europe. What will make them more contented with their lot and better citizens? Will it not be the building of cleaner and better houses with attractive, natural surroundings of space, grass, flowers, shrubs and trees—real, permanent homes?

This is the way to decrease Bolshevism. This is the way to increase Americanism

Therefore my appeal to you is that we now determine and hereafter provide that this country shall secure and grow every known, useful, rare and beautiful exotic plant which will add to the comfort, happiness and refinement of the people, so that there shall be here with us now and with our posterity hereafter not only the survival of the fittest but the improvement of the best.

## CHICAGO FLORISTS CLUB.

The Chicago Florists' Club will have a Ladies' Night, Flower Show and Dance at Hotel Randolph, Thursday evening, Feb. 3. The entire second floor of the Randolph Hotel has been reserved for this purpose. Mowshin's Bluebird Orchestra has been engaged for this occasion. This affair will be tendered as a complimentary event to all the trade and their friends. Every one is invited. Chairman Waters plans to make this the trade's biggest social event. Every florist is requested to wear a boutonniere—every florist's lady should have a corsage bouquet. Come to the dance and flower show and say it with flowers.

The Chrysanthemum Society of America will have its exhibit and meeting in Chicago in November.

President Kohout has appointed the following gentlemen to serve upon a permanent committee for this occasion: N. J. Wietor, F. Lautenschlager, W. N. Rudd, C. C. Pollworth and A. H. Schneider.

The following committees have been appointed for the ensuing year:

Good of the Club Committee—T. E. Waters, Paul E. Weiss, Wm. Wienhoeber, J. E. Pollworth, Chas. Erne, Paul Klingsporn, Ed. Goldenstein and E. A. Ollinger.

Transportation Committee—Michael Barker, chairman.

# GRIFFITH & TURNER CO.,

205 N. Baltimore Street Baltimore, Md.

Mr. Peter Pierson exhibited a bouquet of wooden flowers at the last meeting principally to bring up a discussion upon the Artificial Flower question Mr. Otto Amling stated that the S. A. F. & O. H. should take some action discouraging their use.

Mr. T. E. Waters pointed out that the grower and retailer should push natural flowers to the front. Mr. Waters also pointed out that there was a vast difference between artificial flowers and natural prepared foliage

The next meeting night will be an adjourned meeting to be held at the Randolph Hotel, February 3rd, combined with the Novelty Flower Show, Ladies' Night and Dance.

F. Lautenschlager, Sec.

## WESTCHESTER AND FAIRFIELD SOCIETY

At the regular meeting of the Westchester and Fairfield Horticultural Society Mrs. Smith won 1st prize with a very fine vase of Euphorbia; J. Stuart, 2nd prize with one of his famous cyclamens; R. Williamson, 3rd prize with a well grown Buddleia, and also first prize for a display of vegetables. The main topic was the annual dinner of the society which will be held at the Lawrence Inn, Mamaroneck on Wednesday, Jan. 26.

Oscar E. Addor Secy.

## SPECIAL LECTURES

### They Will Be a Feature of the Shows at Horticultural Hall

As a result of the good offices of Miss Marion Ruby Case there will be special lectures at the summer show in Horticultural Hall, Boston, the coming season. This will be a pleasing innovation, and each speaker will talk about the flowers which form the major part of the exhibit. The lecturers selected are as follows:

Lilacs and Wild Flowers, May 14 and 15, Mr. Kenneth W. Gillet.

Rhododendrons and Azaleas, June 4 and 5, Mr. T. D. Hatfield.

Roses and Strawberries, June 25 and 26, Mr. Wilfred Wheeler.

Sweet Peas, July 10 and 11, Mr. Allen Jenkins.

Gladiolus, Aug. 13 and 14, Mr. H. E. Meader.

Products of Children's Gardens, Aug. 27 and 28, Miss M. R. Case.

Dahlias, Sept. 10 and 11, Mr. J. K Alexander.

Fruits, Nov. 5 and 6, Mr. Albert R. Jenks.

### BOSTON GARDENERS' AND FLORISTS' CLUB.

The annual meeting of the Boston Gardeners' and Florists' Club was well attended in spite of the cold weather. The new officers were installed by Mr. John F. Briry. Five new members were received into the club, George W. Turner, Newton; Raymond W. Swett, Newton; George B. Stewart, Jr., Waltham; E. E. Randall, Prides Crossing, and Clement Estey, Newton Center.

A resolution in favor of daylight saving was passed.

The report of the treasurer showed a balance of $375. The secretary's report gave the average attendance as 98, with 31 new members during the year, and two deaths. After the business meeting dancing was enjoyed until midnight.

On February 7 the club will have a lecture by Mr. J. Otto Thirlow, of Philadelphia, on "A Trip to the South Sea Islands and Australia."

The annual carnation night will come Feb. 15, and at the March meeting Mr. Robert Cameron, of Ipswich, will lecture on "Annuals."

The annual banquet will be held in Horticultural Hall on the evening of February 3, at 6.30. President A. G. Burrage, of the Horticultural Society, and President Thomas Roland of the S. A. F., will be the principal speakers. An orchestra will furnish music and after the banquet dancing will be enjoyed.

### CHANGES AMONG GARDENERS

Mr. Herbert H. Fletcher has come to Boston to take charge of a new estate being developed by L. B. Towl, at Newton, Mass. For 20 years Mr. Fletcher has been with C. F. Dietrich, at Millbrook, N. Y., and is an expert of great experience.

Other changes in the gardening profession are as follows:

Frank W. Sparks leaves the A. B. Dick estate at Lake Forest, Ill., to take charge of the place of Mrs. Juline Rosenwald, at Ravinia, Ill.

Robert McLaren, formerly engaged in landscape development work, has become superintendent on the H. M. Wallis estate at Racine, Wis.

James Clunas has become head gardener to Mrs. William Grosvenor, Newport, R. I.

William H. Ward has become head gardener to Robert Jones, Madalin, N. Y.

### ELM CITY NURSERIES.

The Elm City Nurseries has disposed of all its holdings in New Haven, Conn., and has moved its entire plant to Woodmont, combining both places in one. A recent deal was consumated whereby the property in New Haven occupied by the company was sold for about $80,000 by Ernest S. Coe to Robert Schroder. The tract is to be developed by the new owner for house lots. In its Woodmont location the Elm City Nursery has greater opportunities for expansion and a large amount of planting has been done.

## Men I Like to Meet

JOSEPH HILL

Of the younger generation of florists there is no one more generally popular than Joseph Hill. Whether you meet him at the conventions, or in Richmond, you are always sure of a warm greeting, and you are met in a hearty way whether it be socially or in business. Mr. Hill has a model range in every way, and it is always in the pink of condition. He showed his great ability as a grower the first few years of business for himself by turning out carnations of a standard mighty hard to equal. He grew up in the business, and of course has taken to it naturally. Under the guidance and instruction of that past master of the craft, E. G. Hill, we could look for nothing but the best.

Now that he is specializing in roses we may say the same thing for him. The quality of the stock in his houses is of the very finest. Who ever saw Premier, for instance, better done than Joe Hill had it last winter? Mr. Hill is full of energy, enjoys athletics and is a good fellow in every way.

### ON TO WASHINGTON

The following are among the New England people attending the meetings of the Carnation Growers and the Flower Growers' Association in Washington this week: Jack Nelson, Allan Peirce, George Moyse, Thomas Roland, L. J. Reuter, S. J. Goddard, C. S. Strout, William Sim and Mr. Osborn, of Coombs & Co., Hartford.

# ARE YOU?

# THE PETERBOROUGH WORKERS

When I think of Florence I think of pink roses, nodding their heads over gray stonewalls, of dark cypress trees, of the view of the Duomo, Giotto's Tower and the Baptistery from Fiesole. Others in recalling that beautiful city think of the pictures in the Uffizi and Pitti Galleries. When Miss Mary Morison was in Florence and elsewhere in Italy, she thought of the women in Peterborough, saw all the beauty and wanted to take it home to them. Not only in the photographs which most tourists take home, but also in the handiwork of this beauty loving people. So she began to collect embroideries for them to copy.

One of the first of the Peterborough handicraft workers gives this delightful account of an August afternoon in 1904 when Miss Morison invited her and her sister to see the work she had brought home.

As you all know Miss Morison had traveled all over the world and picked up things here and there. But I doubt if you know what a large collection she had of different kinds of embroidery.

She took us to the dining room where she had the large table completely covered, a smaller one beside it, and things on all the chairs and stands in the room, as well as the small dining table in the smaller part of the dining room. She had each kind by itself, Italian, English, Russian, Mexican and so on. She enjoyed showing and telling us about all the different kinds, and where she got them, but especially the Italian work. We said there was no reason why this Italian cutwork or reticella should not be done here if we only had designs of different things, so we each took a doily home to copy.

The matter was then brought before the Progressive Club of Peterborough and resolutions for the encouragement of this beautiful handiwork were adopted.

We decided to produce handiwork of a distinctive artistic merit for which there would be a good market, and to limit ourselves to only a few styles of work so as to obtain an excellence which would command a ready sale.

The next step was an exhibition of Italian cutwork and baskets at the club. The baskets were introduced for those who did not wish on account of eyesight or for other cause to do such fine work as the reticella. The original idea of baskets was reed or woven baskets. But the exhibition that day was of raffia or sewed baskets from Milford and they were so attractive the ladies all wanted to make that kind. Miss Morison and Mrs. Bass contributed to a fund to secure teachers for Peterborough.

In January, 1904, two basket classes were formed, one with Mrs. Stickney of Milford for teacher, while Miss Mary Adams had the other. We also had a class in reticella work with Mrs. Weber of Boston for teacher. Each member of all the classes was supposed to teach others, in that way to pass the knowledge on to all who wished to join. The workers met through the winter and the number increased from the original twenty-five to over fifty. Miss Morison was in Italy a portion of the winter and brought back many specimens of work which she loaned for working designs. In May, 1905, all finished pieces of the cutwork were examined and approved by Miss Smith of the Boston Decorative Art Society, while Mr. Whiting, then secretary of the Arts and Crafts Society of Boston, examined and appraised the baskets. He highly commended the work as a whole.

In June the committee met and voted to call a general meeting of all persons interested in the movement and in the forming of a permanent organization. On July sixth a number of ladies assembled in Social Hall and a society was formally organized under the name of The Handicraft Workers of Peterborough, whose object it shall be to produce handiwork of distinctive artistic merit and for which there is likely to be a good market.

This society has steadily grown in the interest taken in its beautiful work, so that it is now ready to take orders at all times, has a salesroom open from May till November, conducts a tea room through July, August and September, and again at Christmas and Easter. At the Christmas Market of the Woman's National Farm and Garden Association, which was the sixth annual sale in Boston of the Handicraft Workers of Peterborough, its embroidering found ardent admirers and many purchasers of Christmas gifts.

**Getting Together**

In his installation address Mr. Joseph Cohout, the new president of the Chicago Florists' Club, stressed several salient points, showing that he had a broad and comprehensive viewpoint of the entire business situation as it effects all classes of the trade. It is good to find a man of such breadth of vision, because all too often even officials of prominence cannot see beyond the one line of work in which they are engaged. Yet if the trade is to prosper as a whole, there must be a coordination of interests, because the various phases of the florist industry dovetail so closely that if there is a misfit anywhere, friction is felt all along the line. Mr. Cohout frankly met the statement of some in the trade that there are too many florists' organizations. He argued in reply that there could not be too many organizations, provided their work is efficient. This, of course, is the crucial point. If they justify their existence by their works, well and good.

As Mr. Cohout pointed out, the new order of things must be recognized and the new organizations come only after the need of them has been seen. Yet it was also pointed out that there is no reason why there shouldn't be a centralization of power, and a working union of all the trade organizations.

Said Mr. Cohout, "No matter what we think we are (having reference to the Chicago Florists' Club) we must either cooperate with the specialized trade organizations or form a new organization here by the revision of our by-laws. By centralization we can lay out a course to pursue applicable to all our particular needs. All that is needed is the necessary revenue of the various outside local trade bodies in order to carry on diversified trade requirements. With a common fund we can put over the thing that we set out to do."

Mr. Cohout's remedy for existing conditions is an enlargement of the scope of the Chicago Florists' Club by an amendment to the by-laws so that it can include all the separate trade divisions. This would mean an increased membership and an enlarged treasury, which would, in President Cohout's opinion, multiply the influence of the club and raise the Chicago trade to a prestige in keeping with its importance. Unfortunately it is not always possible to get the cooperation of the different trade bodies among the florists This fact has been demonstrated in New York. The effort to affect an organization which would take in all of the different bodies has been under way for some time. Apparently it is nearer accomplishment now than ever before, although the last reports show that the retail florists are holding back.

Of course there are some who see difficulties and pitfalls in the way of such centralization, and it is quite possible that some of the predictions which they make will come to pass. Yet looking at the matter in a broad way, it seems pretty evident that in some form or other there must be a closer cooperation among all the branches of the business if the greatest good for the greatest number is to be worked out.

Just at present the plans which are being laid and which are slowly materializing in different parts of the country seem to be the best which yet have been devised. Perhaps something better will come along later, but just now it seems wise to us for florists to use the tools which they have at hand, and do the best they can with them.

---

**"What thou Owest"**

Apparently there is a greater tendency than ever before to accept many of the commonly quoted scriptural passages as being applicable to business conditions, confused and abnormal as the latter may seem at the present time. There is, for example, the story of the ungrateful servant who failed to appreciate the leniency of his master, but immediately seized upon a fellow servant and tried to exact from him full payment of his smaller debt. At the recent meeting of the governors of the United States, held in Harrisburg, Pa., this biblical similee was made use of in a statement which might well find a place on the walls of every merchant, including florists throughout the country. This statement which is worth pondering, reads as follows:

"Let every individual do all he can to help and encourage his neighbor. Let there be a complete mobilization of the financial and spiritual assets of every community. Neither God nor the government ought to be asked to help those who do not first make every possible effort to help themselves

"There ought, however, to be a united effort in every community to keep any good man from being destroyed because he cannot immediately meet his obligations Under existing conditions it would be the acme of inhumanity and of unwisdom to force any debtor into bankruptcy if, by the most liberal indulgence, he would ultimately be able to pay. Business failures do more than wreck business. They ofttimes destroy men.

"Liberal indulgences and renewals should be granted by the manufacturers to the jobbers, by the jobbers to the merchants, by the merchants to the individuals. It is no time for a creditor to seize his debtor by the throat and savagely say, 'Pay what thou owest.'"

This does not mean that credit should be allowed to run wild, that prices should be maintained at an abnormal level or that business principles should be fractured with impunity. But it does mean that adequate insurance should be taken out against avoidable failures that menace the community as a whole. The premiums on this insurance can be paid only by those who are directly interested in preserving the commercial stability of the country—manufacturers, wholesalers and retailers.

## Flowers Under Glass

If you are growing orchids, give special attention to Coelogyne cristata from this time on. Avoid having the house too warm. Flowers of the best texture come when the temperature is kept from 50 to 52 at night. You will need ventilation as often as outside conditions warrant, and the compost must be kept moist by giving water whenever it shows dryness. As these orchids are very free flowering, they make popular pot plants, and when grown cool can be had in bloom for the Easter trade.

Cattleya Schroederae is often called the Easter Cattleya, but if you want it in good flower by Easter time, give it a temperature from 55 to 60 at night, 65 to 70 when the sun shines. Sixty degrees is about right for cloudy days.

This is a good time to sow primula seeds, as the seeds germinate well and give strong plants. Make sure of good seed by purchasing only a first class strain. A light compost consisting of leaf mold with plenty of fine sand and powdered charcoal works well. Sow in large shallow pans, well drained, and protect the seed from the air and sun until they germinate. When the young seedlings begin to appear, place them well up to the glass in a house where the temperature runs from 45 to 50 degrees.

Good chrysanthemums depend on an early start, especially in the case of the dwarf, slow growing varieties. Bring stock plants to the light at once, and select only the best cuttings for use, discarding any that have become too long and are throwing a bud.

## George Watson's Corner

"You in your small corner and me in mine."

"Stablilized, prosperous, contented civilization" is the star to which Leonard H. Vaughan has hitched the seedmen's wagon, and the National Garden Bureau is on top with a barrel of the finest material to keep the wheels of horticultural information well greased. We bystanders are all of us ardent rooters for this splendid program, and wish Mr. Vaughan and his committee the most unbounded success. His talk before the Seed Analysis last December was a revelation.

As a sample of how the holiday trade was in the South we may use the report of the Greenville Floral Company as a sample. They say the weather being rainy until the 24th was against them but the final wind up was very satisfactory so that when unexpected business came in on the 27th and later they had no cause to complain and their high hopes that 1920 would prove a record breaker were fully realized. All their cut flower reserves were cleaned up and what flowering plants they had left came in very handy afterwards.

The Orchid growers seemed to have a good inning and they sold by quantities at big prices. But lots of their plants kept on blooming after the big hurrah and while these flowers keep well something had to be done so by mid January they had to drop the price to where even common mortals dare to indulge.

Pages of perfection—that's the only way to express the feeling of one interested in the progress of horticulture—after having looked over the Maule catalogue for 1921. Every one of its nearly two hundred pages is a gem in itself—from whatever angle you view it—whether as a horticulturist, a business man, or an artist. Is it any wonder they are doing the most wonderful business all over the world—the men capable of producing such

a gem of radiance for the people who need the impetus to the glorious path of beautiful gardens to which every cultivated human aspires? Such a book is not only a gem of business literature—it is a monument to the genius of William Henry Maule, the founder of the house, to Edward C. Dungan) its present directing genius, and to all his able assistants. We, who are interested in the progress of horticulture along high-toned, honorable, and ambitious lines—we—every one of us who aspire to higher things—certainly have to take our hats off to this modest, truthful, beautiful, charming book; that has so soothingly alighted on our doorstep this fine January morning, 1921.

The sporting spirit among the florists seems to be coming alive again. We met Edward Reid on the train the other day and he was telling us he just got a notion Saturday afternoon, shouldered his gun and went off down to Essington to shoot clay pigeons in a match game. He came out very nearly on top in spite of a long lay off. And now comes a ten pin team of florists who have won the championship in a series of games in which eight clubs were engaged. This tournament has been going on for

some time on the Keystone alleys. The personnel of the florist team is: Taylor, Wanger, Robertson, Garrett and Eisele. Robertson is an old timer of Horticultural Hall days, and Eisele is a Niessen boy. Go to it lads. Great to know you are having some fun. Its a gloomy world but there are some bright spots.

The canners had a six day convention at Atlantic City commencing January 17th. Many of the big seed houses were represented. Chas. P. Guelf, Harry Hedges and Howard M. Earl looked after the interests of the Jerome B. Rice Co. in their usual efficient style.

Among our distinguished recent visitors: the Ruzuck brothers, and C. P. Dudly of Madison, N. J.; C. M. Coe, D. M. Ferry & Co., Detroit, Mich.; Mr. Bauer, S. S. Pennock Co., Washington, D. C.; S. Mortensen, Southampton, Pa.

## NEW ENGLAND NOTES

Robert E. Young, for four years shipper at the Bay State Nurseries in North Abington, Mass., has gone to Greensboro, N. C., where he will enter the nursery business in conjunction with his father, who is a large fruit grower.

A. J. Boothman, of No. Adams, Mass., has turned over his greenhouses to his sons, Harold and Thomas Boothman. They represent a total of 25,000 square feet of glass. The business was started 25 years ago, with two small hotbeds. The greenhouses will be run in conjunction with the flower shop in No. Adams, of which Mr. Boothman will remain in charge.

E. W. Vineca, president of the Crowell Fern Co. of Millington, Mass., recently had a narrow escape from death. He was coming down a long hill with a truck loaded with ferns when the machine skidded and overturned. Mr. Vineca was pinned underneath the load, and it was only after three hours of struggling that he succeeded in getting out from under the wreckage.

The florist business conducted for many years by the late Frederick G. Danforth, at Augusta, Me., will be continued under the firm name of F. G. Danforth Co. The members of the new firm are Mr. Danforth's widow, daughter and son.

## BOSTON FLORISTS MEET

The February meeting of the Boston Florists' Association, held at the City Club, was one of the most enjoyable of the season. President Letson was in the chair, and the speaker of the evening was Representative Henry E. Pinkham, of Lynn, one of the ablest speakers on Capitol Hill. Mr. Pinkham held the closest interest of his hearers while he considered the Commonwealth and Democracy.

PRESIDENT B. F. LETSON

He divided Democracy into its social, industrial, political and ethical elements, each of which was discussed in a brilliant manner.

The matter of holding the meetings of the association the second Wednesday, instead of the second Tuesday of each month, was brought up, but was laid on the table for further consideration. It was declared to be the sentiment of those present that the dinners should start promptly at 6.45 and the meetings close sharply at 10.

Three new members were voted in, Mr. Edward Winkler, of Wakefield, Mr. Timothy Kelley, of Watertown, and Mr. Gustave Thommen, of the Florists' Exchange. The association is now in a prosperous condition, and it is expected that there will be a large increase in membership before the season is over.

## THE MARKET

During the last few days the market has slowed up somewhat, but has been very good for the last two weeks, speaking in a general way. There is no particular shortage in any line, and no great over production. Roses are selling from 8 cents up, carnations from 5 to 7 cents, and callas from 2 to 3 cents. Jonquils are fairly abundant at 5 cents. Easter lilies are bringing up to 20 cents. Violets continue to occupy a low place, selling at $1.00 to $1.25 a bunch.

Vol. XXXIII FEBRUARY 10, 1921 No. 3

# THE TALK OF THE TRADE

The carnation convention in Washington showed a repetition of the past few years in the limited number of exhibits. According to my idea the number of entries should have been very much greater; as it was I think I am right in saying that New England carried the larger part of the weight of this meeting. Where was New York and Philadelphia? Those two cities especially are within easy traveling distance, but the middle West also was sadly lacking. By that I mean, of course, in entries. I think the attendance was representative in every way. Of course, a lot of other meetings being held at the same time brought in a representative crowd. Such meetings as those of the directors of the S. A. F., National Flower Show Committee, directors of the Growers' Association. The publicity campaign could not help but round out the Carnation Society's meetings in a very satsfactory manner. While there was a lack in the quantity of blooms shown, no one could say that there was anything lacking in the quality. When the party of New England growers came back home they must have carried along a very satisfied feeling.

Of course we could look for nothing else than to see Laddie on the top round of the ladder. Sam Goddard's vase of Laddie taking the sweepstake was wonderful. The vase of 100 Laddie by William Sim was mighty fine, too.

I suppose that it wouldn't be hard for me to start someone to talking and to differ with me when I express an opinion on one vase, but I am going to say it, just the same. I don't think there was a finer vase of carnation shown in that hall than the 100 Rosalia shown by Mr. Goddard. They were way ahead of the average quality of Rosalia.

Of course, in novelties, Mr. Strout's Maine Sunshine was, as expected, the king pin. That is a great variety, and the more one sees of it the better he likes it. The Lark, a Dorner seedling shown by Goddard, looked very promising. I believe it will be introduced next year, and I hope so. It is not so deep in its penciling as Benora, but is a very pretty thing and from what I have seen of it and from what I hear from both Goddard and Dorner it is a very free flowering sort.

The class of reds was very well filled and it doesn't make much difference how you look at it, they ran pretty close in quality. Happy Day, Dorner's new red, Eureka, Belle Washburn and Herald were all fine, and there was very little choice among them as to quality. If you could consider only color you wouldn't get much further than Happy Day. What a bright, snappy color it has! It is well named.

W. D. HOWARD
President of the American Carnation Society

There were two or three good white carnations shown. I mean new varieties. They are Harvester, White Delight and Thomas C. Joy. They all looked good and while in a general way it takes an extra good one to beat Matchless, each of these new ones has qualities to warrant giving it a trial.

I hope Mr. Strout decides to let Dorner go onto the market this coming year. While I do not know anything about how it grows, if in that way it compares favorably with its color, size and finish it will be sure to make good.

It was decided to go to Hartford for the 1922 meeeting, and this was a happy way of arranging for next year, as the carnation men are going to support the national flower show in Cleveland in the latter part of March, 1922, and it would be an unfair burden to take the growers from the east to Cincinnati in January and then right back again only eight weeks later to Cleveland.

Naturally, the New England growers were out for an eastern president and their choice was W. D. Howard of Milford, with Mr. Osborn of Hartford as vice president. Mr. Howard will make a good president and will have strong support. His election adds one more to the honors which have come to Greater Boston the past year.

---

Mr. James G. Colman, a prominent florist of Sioux Falls, S. D., is an optimist of the right calibre, for he is showing his optimism by adding five thousand feet of floor space to his large greenhouses on the banks of the Sioux. The addition consists of two new houses, requiring six thousand square feet of glass. Mr. Colman recently stated the seasons for his optimism as follows:

"My business for the past year has been nearly if not quite as good as any year of my experience. I was apprehensive of the holiday trade, but to the best of my judgment the business in all lines has been as good as in the past with the possible exceptions of jardiniers. Last year I sold about $500 worth of jardiniers, while this year there was but little call for this article and my total sales would not reach $25. But they are an article that is easily stored away, and they will be just as good another year. In the line of potted plants we sold many more than ever before. Cut flowers were also in as good demand as ever.

"Regarding the future, I expect and am planning for the largest year in 1921 that we have ever had. I think that everything points to a gradual return to conditions which existed before the war. I do not mean by that that we are going to return to the old scale of wages and the pre-war prices, and no one wants those conditions. What I mean is that we will gradually return to a normal condition without

much difficulty, and that it will be but a comparatively short time before the business of the entire country is slipping along as smoothly as ever."

---

At the meeting of the New England Nurserymen's Association, of Boston, Mr. John Farquhar, who was elected president, had something to say about wage conditions which greatly interested his hearers. According to Mr. Farquhar, plenty of labor is now available, with more coming into the market weekly. He expressed his conviction that by spring it would be possible to get all the labor needed at $3 a day, and in many instances for less. This, of course, is a greatly changed condition, and will make it possible for nurserymen and landscape architects to go ahead with work projected long ago but not carried out because of high prices.

The situation seems to be quite different from that prevailing abroad, for over there wages are from two and a half to three times higher than before the war, and there doesn't seem to be much prospect of any decrease for some time. The cost of living has increased enormously, and it is only by keeping up the high wages that workmen are able to live and business kept from collapsing. Mr. Farquhar pointed out that the situation has been greatly complicated by the Federal Horticultural Board's ruling, which has practically killed much of the business in horticultural centers of Europe.

---

I find that one of the western florists is advertising Buddleia asiatica quite extensively as a cut flower for winter use. What surprises me is that so few growers or florists in general realize the value of this winter flowering Buddleia, which is not at all hard to grow, and is well received in any locality after buyers have become familiar with it. It is one of the best cut flowers for window decoration, being exceedingly graceful and combining well with other blooms. Probably it sells best under the name Winter Lilac, a name which has a popular appeal. All things considered, there are few flowers better adapted for bridal work, table decoration, baskets and corsages when the proper method of using the sprays is understood. It would seem as though florists might well feature this Buddleia to a greater extent so that it would become more common in all markets.

---

The Rhode Island Horticultural Society has elected Prof. J. E. Hill, president, Ernest P. Thomas, secretary, and F. I. Chase, treasurer.

## NEW ENGLAND NURSERYMEN

### Many Important Matters Discussed at the Annual Convention in Boston

The members of the New England Nurserymen's Association assembled for their tenth annual convention at the American House in Boston were in very good spirits in spite of the fact that they had to admit encountering difficulties during the past season with some of their problems still unsolved. President Charles Adams, of Springfield, presided, and in his opening address said that the outlook for

J. K. L. M. FARQUHAR

1921 was, on the whole, encouraging. He also said that in many ways the year just closed had been a successful one.

A. C. Burrage, the newly elected president of the Massachusetts Horticultural Society, read an interesting paper upon the relationship between his organization and the nurserymen, urging the latter to take a more active interest in the society and to participate in its exhibitions.

Mr. John Farquhar, as chairman of the legislative committee, laid before the association the difficulties arising from the present policy of quarantine on the part of the Federal Horticultural Board and the work that is being done to bring about a modification of the drastic rulings. It was voted to contribute fifty dollars to the fund to be used in support of the allied horticultural interests campaign against the quarantine.

In the course of the convention, Mr. F. T. Borst, of South Framingham and Boston, presented a resolution which was adopted unanimously, protesting against the use of the Yosemite National Park for reservoir purposes, and urging that legislation be enacted at once excluding the operation of the Federal Water Power Act, from all National Parks and National Monuments. On motion of A. E. Robinson, of Lexington, it was voted to request the American Rose Society to establist a rose testing garden in the vicinity of Boston, something which would be of great value to rosarians of New England. The association unanimously passed a resolution for the establishment of a botanical garden of not less than 1000 acres near Washington, D. C., for the purpose of growing and classifying all varieties of trees and plants available to American horticulturists. The association voted also to instruct its members to write their respective senators and congressmen urging them to exert their influence in having Congress furnish a fund for the maintenance and development of such an institution.

Mr. C. R. Burr, of Manchester, Ct., a former president, made an interesting talk on the business outlook, which he called highly favorable for nurserymen. Mr. E. F. Coe, of the Elm City Nurseries, New Haven, presented the report of the publicity committee.

The need of nursery training in schools and colleges, as a factor in the promotion of the business, was outlined by Professor Frank A. Waugh, of the Massachusetts Agricultural College, who admitted, however, that practical experience is, in the last analysis, the best teacher. For this reason he suggested a system whereby students could be placed in nurseries and thus learn the relationship between the theoretical and the practical, while still in the apprenticeship class. European horticulturists, he said, have devised a similar plan with beneficial results, both to the students and to the horticulturists themselves. The general discussion which followed Professor Waugh's address brought out the fact that a man's success in nursery work depends not only upon a thorough knowledge of the subject, but upon a sincere liking for the business, coupled with perseverance.

The convention closed with an election of officers, the following named being selected: President, John K. L. M. Farquhar; vice president, E. F. Coe of New Haven; secretary, S. A. Robinson of Lexington; treasurer, V. A. Vanicek of Newport; executive committee, Stephen Hoyt, New Canaan, Conn.; D. Webster Dow of North Epping, N. H., and Homer N. Chase of Auburn, Me. Six names were added to the membership list.

# BANQUET IN BOSTON

## Gardeners' and Florists' Club Holds Very Successful Event

No more successful or enjoyable social affair has ever been held by the Gardeners' and Florists' Club of Boston than the annual banquet at Horticultural Hall last Thursday evening. The attendance was large, covers being laid for 350 and at every plate was an orchid boutiniere provided by Mr. A. C. Burrage, president of the Massachusetts Horticultural Society. The tables were elaborately decorated with cut flowers and potted plants of many kinds.

At the head of the table were seated the officers of the club and the invited guests, including Mr. Burrage, Thomas Roland, Marian Robey Case and George Simpson of Milton. Pres. William H. Judd introduced the speakers in well chosen words. Mr. Burrage made a plea for the preservation of the native wild flowers and made the offer of 100 acres of land to be taken over by either the Massachusetts Horticultural Society or the Club to be used as a wild flower preserve. Miss Case spoke of the work being done at Hillcrest and said that she could use four more boys the coming season. President Roland of the S. A. F. gave a brief but comprehensive review of the work accomplished by the society, and its aims. Robert Cameron replied wittily to the toast "The Ladies." Sec. W. N. Craig and Vice-President Harold Ryan each said a few well-chosen words. During the evening a character artist gave a highly amusing entertainment, making many good natured hits at well-known members of the club which caused no little laughter.

After the speech making was over the hall was cleared for dancing. The floor director was Donald B. Sutherland and the aids, John T. Slayter, John R. New, Harold Ryan, John L. Russell and George W. Hamer.

PRES. WM. H. JUDD

### GENERAL NEWS NOTES

Fred Reed has become associated with W. W. Snell, the greenhouse man in Herkimer, N. Y., and will have charge of the Little Falls end of the business. The firm will now be known as Snell & Reed.

The new nursery company at Taunton, Mass., is to be called Azaleana, Inc. The directors are President K. P. Smith, Treasurer Leonard W. Ross and A. P. Teele.

# DAHLIAS

Field Grown Roots

FOR

## SEEDSMEN, NURSERYMEN and FLORISTS

The popularity of this flower is steadily on the increase—witness the tremendous success, last September, of the New York Dahlia Show, when the roof-garden of the Hotel Pennsylvania was crowded for three consecutive days.

From my stock of over one thousand varieties I am able to select for you a complete and well balanced list of both commercial and new varieties. I shall be pleased to prepare such a list upon request.

## J. K. ALEXANDER, *The Dahlia King*

LARGEST DAHLIA GROWER IN THE WORLD

32 Central Street, East Bridgewater, Mass.

### GOOD FOR THE FLORIST

Muriel was telling Isabel of the shy young man that had for some months been "gone" on her, but whose suit had languished because he simply hadn't the courage to speak out. Finally, Muriel said, she decided that it was "up to her" to take decisive measures. Accordingly, the next time he called she pointed to the carnation in his buttonhole and said: "I'll give you a kiss for that carnation."

Whereupon the bashful suitor's color outdid the carnation in brilliancy, but the exchange was effected. Then the young man grabbed his hat and started to leave the room.

"Where are you going?" demanded Muriel, surprised.

"To the florist's for more carnations," he called out, as he went through the doorway.—Boston Herald.

### AMERICAN ROSE SOCIETY

#### Plans Being Laid for Several Important Events This Year

An interesting meeting of the Executive Committee of the American Rose Society was held at the City Club, Philadelphia, on January 28th, 1921, the members present being Messrs. Pyle, Pennock, Boyd, McFarland, Mills, Simpson and Pierson. In the absence of Mr. John C. Wister, the Secretary, Mr. Pennock acted as Secretary Pro Tem.

Mr. McFarland, Editor of the Rose Annual, stated the book would go to press about February 15th, with the idea of getting it out about March 10th.

Mr. Wallace R. Pierson, Chairman of the Committee on Commercial Cut Rose Interests, stated he would be glad to add to the number of his Committee, which is working towards getting a good showing of roses at the Massachusetts Horticultural Society Snow in Boston, April 6-10th, and it is hoped that all growers within reach of Boston will exhibit whatever they can in the way of roses, and assist not only the Massachusetts Horticultural Society, but The American Rose Society. It is planned at this show to have a public meeting, at which there will be speakers, and it is hoped moving pictures illustrating some of the up-to-date establishments of the country.

It was decided to co-operate with the Missouri Botanical Gardens in the establishment of a Rose Test Garden in St. Louis.

The contemplated trip of The American Rose Society to visit Portland, Oregon, in June, 1922, to dedicate the Roseway, which is now being built in that city, was brought up and a discussion of the itinerary was entered into. The prospect is that it will be one of the great events, not only in rose history, but in the horticultural world as well, and any one who is able to go should take this trip. Full details will be given the trade in due time, as to the cost and contemplated stops on the way out and return.

S. S. PENNOCK,
Secreatry Pro Tem.

### ROSE SHOW SCHEDULE

The American Rose Society has accepted the invitation extended to them by the Massachusetts Horticultural society to co-operate with them in their big Spring Show, which is to be held in Horticultural Hall April 6 to 10th, 1921. The following schedule has been prepared by the Massachu-

**IBOLIUM PRIVET**
**The New**
**HARDY HEDGE**
Resembles California.
Hardy as Ibota.
**Dormant summer cuttings**
$15.00 per 100.
All larger grades sold.

**BOX-BARBERRY**
**Summer frame cuttings**
$25.00 per 1000
for lining out.
10 samples post-paid for $.50.
**Surplus**
Am. Hemlock, Pin Oak, Gingko, Red Maple, Japan Iris.

**The Elm City Nursery Co.**
**Woodmont Nurseries, Inc.**
*New Haven - - Conn.*
Buy Box-Barberry and Ibolium Privet of the introducers.

setts Horticultural Society and this excellent schedule should bring out a very fine exhibit of roses, both in pot plants and cut flower exhibits.

### Plants

ROSES.—Rose Garden. Display of rose plants, any and all classes. Appropriate accessories permitted. Artistic arrangement and general effect to be considered in making awards, two prizes:

| | | |
|---|---|---|
| Society's Gold Medal and | $1000 | |
| Appleton Gold Medal and | 500 | |
| Display of rose plants, any or all classes, arranged for effect, not to exceed 250 sq. ft., two prizes | $200 | $100 |
| Arbor arrangement of climbing roses, two prizes | 100 | 50 |
| Arch arrangement of Climbing roses, two prizes | 75 | 40 |
| Twelve specimens Climbing roses, not less than six varieties, two prizes | 150 | 75 |
| Six specimens Climbing roses, not less than three varieties, two prizes | 75 | 40 |
| Three specimens Climbing roses, distinct varieties, two prizes | 40 | 20 |
| Bed of roses, not to exceed 50 sq. ft., two prizes | 75 | 40 |
| Display of Dwarf Polyantha roses, two prizes | 75 | 40 |
| Display of Hybrid Perpetual roses, two prizes | 50 | 25 |
| Hybrid Tea roses, arranged for effect in a bed, 50 sq. ft., two prizes | 50 | 25 |
| Collection of cut blooms to cover 300 sq. ft., to be staged on Friday of the exhibition, three prizes $500 | 300 | 200 |

### Fifty Blooms

| | | |
|---|---|---|
| American Beauty, two prizes | $ 35 | $20 |
| Mrs. Aaron Ward, two prizes | 20 | 10 |
| Mme. Butterfly, two prizes | 25 | 12 |
| Crusader, two prizes | 25 | 12 |
| Mrs. Charles Russell, two prizes | 25 | 12 |
| Francis Scott Key, two prizes | 25 | 12 |
| Double White Killarney, two prizes | 25 | 12 |
| Frank Dunlop, two prizes | 25 | 12 |
| Hadley, two prizes | 25 | 12 |
| Ophelia, two prizes | 25 | 12 |
| Pilgrim, two prizes | 25 | 12 |
| Rose Premier, two prizes | 25 | 12 |
| Any other White variety, two prizes | 25 | 12 |
| Any other Pink variety, two prizes | 25 | 12 |
| Any other Red variety, two prizes | 25 | 12 |

### Special Prizes

A Gold Medal is offered for the best new Rose not yet disseminated, whether of domestic or foreign origin; exhibits are to be judged by the official scale of the Society, and no gold medal is to be awarded to any Rose scoring less than 95 points.

A Silver Medal is offered at the same time, and under the same conditions, for a novelty scoring not less than 85 points.

A Certificate of Merit is to be awarded to all novelties scoring 80 points.

It is further ordered that the complete scores of all the entries in the competition be filed with the Secretary of the Society before the award of any medal is confirmed.

Max Schling Gold Medal, for the best 25 blooms of any undisseminated Pink Rose.

A. N. Pierson, Inc., Gold Medal,—for the best 25 blooms of any undisseminated Red Rose.

S. S. Pennock Gold Medal,—for the best 25 blooms of any undisseminated White or Yellow Rose.

All entries are to be made to the Secretary of the Masachusetts Horticultural Society, Wm. P. Rich, Horticultultural Hall, Boston.

This schedule will reappear at a later date in the trade press with class number added.

The American Rose Society, through its Committee on Commercial Cut-Flower Interests, appeal to you for your support. Special premiums will be welcome additions and may be sent direct to the Chairman of this committee, who will see that due recognition and publicity are given.

Arrangements for a meeting of the American Rose Society are being made by the Secretary.

The show is April 6th to 10th. The date for staging cut-flowers will be in the final schedule of the Massachu-

**PUSSY WILLOW**

# Burpee's Sweet Peas

There is always a ready demand for good Sweet Peas. Well grown flowers realize most remunerative prices, and it is doubtful if any other crop will bring the florist greater profits, considering the outlay for stock, and the ease with which the crop is handled.

To ensure flowers of highest quality and at a time before the market is glutted with ordinary stock, the seed should be sown during January or February in pots. Start them in a cool house or even a cold-frame, and so have first-class sturdy plants for setting out in the open field early in April. This method will give you flowers late in May, and much superior to those sown directly in the open.

When ordering ask for our leaflet on Sweet Pea culture.

The House of Burpee is recognized the world over as American headquarters for Sweet Peas. Burpee's Sweet Peas are grown and developed on Floradale Farms, our California seed ranch, and our strains are unsurpassed for high-grade quality and "trueness" to type and color.

Good Sweet Pea seed is scarce this season, due to short crops, and as our stocks of some varieties are limited, we suggest early ordering.

For full descriptions and classified list of all varieties, including many novelties now offered for the first time, write for Burpee's Annual, mailed free upon request.

**W. Atlee Burpee Co.**
**Seed Growers Philadelphia**

## WHEN ADVERTISING STOPS

The following article appeared recently in the Aberdeen (S. D.) News and its story is obvious:—

"Do you remember Pearline?

"Once it was the most popular washing powder in America.

"In 1907 Pearline stopped advertising.

"Its owners said that advertising was no longer necessary, that Pearline was a good product and everybody knew it.

"In 1914 the Proctor Gamble Company bought Pearline at their own figure to save it from bankruptcy. They renamed the formula and have sold millions of dollars' worth of it since by advertising.

"In seven years the public forgot Pearline, and it dwindled from millions to nothing.

"Pears Soap once tried the same experiment; noting the alarming slump in sales in six months they resumed their advertising and did not bust.

"If people did not die, if people did not move, if new generations did not grow up, if customs and habits did not change, if competition did not compete, if people were not open to suggestion and receptive to new ideas, there would be no need of advertising, and when a business was once built up, it would stay put. But until then advertising is the surest safeguard for the established product, the most certain hope for the new idea."

The application of the above is just as true to our National Publicity Campaign if we permit it to die out as will be the case if funds are not forthcoming. Undoubtedly those long-headed, loyal types of progressive florists who have seen the light of advertising will continue to give our campaign their moral and financial support. But there are too many who have not as yet absorbed the merit of the above incident and who, when it is too late, will gather around and say "What's become of our national campaign and our slogan 'Say it with flowers'?"

While it is true that "Say it with flowers" is seen everywhere the national campaign was responsible for it, and should be the central part of the plan whereby we make our foundations solid and dignify the florist industry to its proper pedestal. Without the national advertising we are losing the efforts of the past two or three years and any effort later on will have to suffer if we discontinue for too long a period.

We have one year more of voluntary subscriptions to help the campaign fund and those who have not subscribed in the past can feel that, by sending their portion now, they have at least made partial payment for the success it may have given them in the past three years, so that the fourth year will find many on the subscription list who had not given before but felt that the national campaign had benefited them enough so that we could carry on our campaign for the fourth year as originally outlined.

What say you?

HENRY PENN.
Chairman National Publicity Campaign.

## DAHLIAS FOR CUT FLOWERS

### Much Attention Now Being Given to the Production of Commercial Varieties

Dahlias are bound to have an important place in the cut flower market. Commercial growers are paying much attention to the kinds which will be of value to florists. Several good kinds have already been put out, like Frank A. Walker. This dahlia, which has been made popular by J. K. Alexander, of East Bridgewater, is a fine cut flower, and very early to blossom. It is one of the kinds to be recommended to all growers producing cut flowers for the trade.

The extent to which the development of the dahlia in a commercial way is being carried on may be judged from a recent talk with Walter Darnell, of East Moriches, a famous dahlia grower of Long Island. Among other things Mr. Darnell said:

"The main thing we are working for is the commercial dahlia. We want it to compete with the other cut flowers. To give it a good market standard for the cut flower trade we must have dahlias with good strong stems; they must stand up well in a vase. Good color is the next consideration. And here the dahlia excels. There is no color or combination of colors that is not possible the richest shades and most gorgeous tippings. Every color in the spectrum is represented in the range of colors found in the dahlia, with the exception of blue.

"The lasting quality is another consideration for the cut flower trade. Here the dahlia excels again. It is sturdy and unequalled for lasting after cut.

"As to price, the dahlia can be offered at a price that is not possible for other flowers. The bushes carry from 50 to 60 blooms at a time over a period from mid-summer until late autumn, thus making possible an incomparably low price for a flower of the beauty of the dahlia.

"We have at present 1,600 varieties. Each of these varieties represents a distinct improvement upon the parent stock from which they are developed. If the seedlings show no improvement over the parent stock they are thrown away.

"The process of perfecting a new variety of dahlia entails an endless amount of care and expense. The seeds are got by cross-pollenization. As the seeds are developed the seed pod is tied up to keep the bees from spoiling our work.

"The first year, the seeds thus obtained are planted in 'flats' in the glass houses in February. When they show four leaves they are transplanted into pots, each one in a separate little pot, making an array of from 30,000 to 40,000 little potted seedlings. Then when they begin to develop the stronger ones are reset in larger pots, the weaker ones are thrown out. After all danger of frost is passed the plants are set out in the open. Of those that are set out a very small percentage prove fit to keep. A sweeping discard is made and thousands are thrown away. Only those that promise a big advance over the parent plants are kept. The tubers of the selected ones are dug up and stored for the winter.

"The following spring the tubers are cut up and planted, and as the plants grow, further elimination is made. Some of them do not run true, some are throw-backs to the parent stock. Some show two or three colors to a bush.

"At the end of the third year we have usually got down to 12 or 13 plants out of the 30,000 or 40,000 seedlings we began with, and consider ourselves lucky at that. Of these there will be perhaps two or three plants that hold any possibility of bringing enough on the market to pay the expense of the work expended upon them. A good many growers come out at the end of the third or fourth year with no plants at all that are worth working up.

"But if the plants surviving the final elimination promise to repay the effort we have put upon them, the clumps are set down under glass and cuttings are made from them. The cuttings are made in sand; when they root are potted, then transferred to the garden, and in the autumn of that year we have a load of tubers to sell.

"Varieties come and pass like winter snow. In England, in 1840, there were listed from 1,200 to 1,400 varieties of dahlias. Most of these have gone into the discard. The new varieties are a great improvement over the older ones. The older ones were small, and the whole cry now is for size and color. The autumn colors are the most in demand now—the golden tints, the scarlets, the buffs and purples. The men usually want red flowers. They come in and say: 'Anything just so it's red.' The women usually like the cooler tints. There is one woman who buys all lavender and white flowers from us. But it is the autumn shades that everyone is working for—the yellows, coppers and buffs."

# RAMBLING OBSERVATIONS OF A ROVING GARDENER

In his talk before the Gardeners' and Florists' Club of Boston recently, Mr. A. C. Burrage spoke of the disappearance of wild plants from different sections of New England. I think that this point is well illustrated by the beautiful Magnolia Glauca, which was formerly to be found in great abundance in certain sections along the coast of Massachusettts but now has become rare. The town of Magnolia, near Gloucester, was named because of the great numbers of Magnolias growing there and plenty of people can easily remember the remarkable display which attracted hundreds of visitors in years gone.

Apparently interest in rose growing is going to be keener than ever this year. This will be true undoubtedly in New England owing to the big rose show to be held in Horticultural Hall, Boston, in April. Through the medium of the Rose Society much valuable information is being obtained about roses suitable for growing in different parts of the country. Herbert A. Pennock, of Jupiter, Florida, has prepared a list of roses which he considers reliable and satisfactory varieties for Palm Beach and other places with similar soil and climatic conditions in the state of Florida. New settlers in that vicinity from the north are usually much in the dark as to what varieties to send down there. Here is Mr. Pennock's list:

Gruss and Teplitz, Meteor, Hoosier Beauty, Paul Neyron, Ophelia, Olivia, Pink Maman Cochet, Red Radiance, Pink Radiance, Duchess de Brabant and Etoile de Lyon.

Many of this season's catalogues differ but little from those of former years. Some, however, contain some striking features either on the covers or inside. Among the catalogues which are sure to catch the eye because of the front cover design none is more effective than that of A. N. Pierson, Cromwell, Ct. The front cover is given over almost wholly to a landscape scene in which Triomphe Orleanais rose is the most conspicuous object. This rose is planted so as to form a long ribbon up and down the page, and the coloring is remarkably good, the roses contrasting delightfully with the green grass and the conifers. In the Pierson catalogue there is also an excellent colored picture of the new rose F. J. Grootendorst used as a hedge. This picture was made at Cromwell, and illustrates a point which I have al-

Magnolia Glauca

ready mentioned in these notes, I think, that this new rose from Holland has possibilities fully equal to those of Rosa Rugosa. Grootendorst is really a remarkable rose, having much the same habit as the rugosa which is one of its parents, but blooming freely all summer, showing in this way the presence of much Baby Rambler blood. As Mr. Pierson points out, it is an exceedingly useful hedge plant, being dog proof and stronger than rugosa in growth, while it is hardy as the oaks on the New England hills. The small red flowers are very interesting, being fluted in such a way that they much resemble carnations.

---

Many other novelties are contained in the different catalogues, although they seem to run to annuals more than to perennials. Several seedsmen are putting out the Blue Lace Flower this year, the annual which was first made famous by Max Schling, of New York, as a cut flower. I am glad to see that Maurice Fuld Inc. is numbering Hamamelis japonicum among the few shrubs which this company lists. This winter flowering witch hazel ought to be far better known. It is one of the best shrubs which can be used for planting in city yards, apparently thriving in localities where smoke and dust would cause the average shrub to lead a very precarious existence.

---

As usual, R. & J. Farquhar Co. of Boston, have a greater number of novelties among the shrubs than any other nurseryman. This company gives greatest prominence to two new azaleas, A. Schlippenbachii, which in the last two or three years has been viewed with great interest in the Arnold Arboretum, and A. Louisa Hunnewell, a gorgeous hybrid of A. japonicum and A. sinensis, which was brought into being by T. D. Hatfield, superintendent of the Hunnewell estate at Wellesley. This is a remarkably fine azalea, and evidently stands forcing well, as some splendid specimens were exhibited in Horticultural Hall last spring.

---

The matter of mulching roses with living plants which was mentioned in this department some weeks ago continues to awaken interest. I have been impressed with what Mr. E. H. Jenkins, an English grower of wide experience, says in regard to some of the plants commonly used across the water where this plan is more commonly followed. He says among other things: "Roses differ in growth according to their types and constitutions, hence suitable mulching subjects would have to be considered in conjunction with these, as also locality and soil. Generally, however, the dwarfest Tufted Pansies, e. g., J. B. Riding and others of like spread, Aubrietias, Campanula muralis, the C. garganica set, subulata Phloxes, Mossy Saxifrages, and Veronica repens would be useful, as much for their amiably-disposed natures as their carpeting growth and diversified foliage or flower. But because of root vigour and rapid and abundant top spread Veronica prostrata would need to be used cautiously, whether alone or in conjunction with aught else, seeing its almost rampant growth in good soil. It is doubtful, too, whether a plant of its vigor and freedom could be correctly regarded as a mulching subject. In the gardening sense a "mulch" may be for purposes of enriching the soil or retaining moisture, or both. Subjects like this Veronica, which are ever drawing sustenance from the soil and in summer roofing it over and excluding the rain-fall and dews, are scarcely mulchers in the true sense, though the part they play in excluding great heat and thereby in certain instances reducing soil contraction the result of the rapid evaporation of moisture to a minimum, might render them a fairly good and useful equivalent.

"These, however, are matters for experiment, since hardly any two localities or soils would give the same results. Seeing that Roses in well prepared beds may be regarded as safe for several years, and each bed of one variety, useful carpeters should not be difficult to find. With the Roses sensibly spaced, Tufted Pansies, the best Mossy Saxifrages, and the dwarfer-growing hardy Heaths alone might be made much of. They each possess attributes qualifying them for such associations—accommodating, hardy perennials, and consistent and free bloomers. Below a white or cream-coloured Rose a carpet of Viola cornuta atropurpurea is something to remember, and it will not only stand the shears, but go on for years. Similarly the rich pea-green, before flowering, of Erica (Calluna) vulgaris Serlei as an undergrowth to a bed of pink Roses is a thing not easily forgotten."

---

The J. C. Rennison Co., florists of Sioux City, Ia., have completed a new, up-to-date plant with 100,000 square feet of glass. This long established company was started by J. C. Rennison forty years ago, and cuts 1,500 carnations and 1,000 roses a day.

# ADVERTISING AND SELLING

It often is difficult to mold a salesman into the kind of man you would like to have represent you in dealing with your customers, but often it pays to have little talks with the staff for the purpose of showing them how they can help your business, and in that way increase their own opportunities and salary. Perhaps it would be of value to relate to them the following experience, which is given in the American Magazine under the title of "Blunders of Salesmen." To be sure, the men described were not in the florist business, but the psychology of salesmanship is the same, whatever the article handled, and it is a poor tradesman who cannot apply the mistakes of men in other lines to his own circumstances. Here is the story.

"Only the other day I was in an automobile sales place when Mr. B———, a big down-town lawyer, entered. You know, of course, that he has been lame for years, ever since he had his leg crushed while on a hunting trip in the Rockies.

"The salesman who was waiting on him seemed to be getting along swimmingly until the lawyer made some remark about a rival brand of car that he had been looking at the day before.

"'That car won't interest you,' the salesman hastened to protest. 'No speed, no speed! Stack her up beside this one for a good road race, and she'll just limp along.'

"I could have gone over and kicked that salesman, who was very much surprised when his potential customer left, a minute or two later. By his use of the word 'limp' he had called attention, quite unconsciously, of course, to the attorney's physical impediment."

"Did you buy a car yourself?" I asked.

"No," replied the sales manager; "and there's another funny thing: The man who was waiting on me knew his machine from A to Z and had a mighty convincing line of talk. But his finger nails weren't clean. Now, it just happens that I have an abhorrence of dirty nails. So have many other people. The fact that this salesman's personal appearance offended me in this particular turned the balance against a sale. So I walked out.

"Maybe I was finicky. All right. But the point is that I didn't buy the car, although I know it was quite as good as the salesman said it was."

---

The J. J. Beil Co. is to open a new seed store on Fair Street at Kingston, N. Y.

# ARE YOU? YOU MUST BE

Reading our bulletins which are moving frequently throughout the season. Never have we had such a strong demand for all kinds of stock as we had in the two dull months of November and December.

MR. SPRING BUYER right now place your order and keep in touch with us on the following:

APPLES—A good list of varieties. Many of the scarce sorts.

PEARS—General assortment strong on Bartlett.

PLUMS—"Jap" budded on peach, right prices.

PEACHES—Surplus of Carman, Champion, Early Elberta, Elberta.

H. P. ROSES and CLIMBERS in strong grades No. 1, No. 1½ and No. 2.

ORNAMENTAL SHRUBS—General assortment.

AMPELOPSIS VEITCHII—2 year No. 1 and 1 year No. 1 planting stock.

ASPARAGUS ROOTS.

BARBERRY THUNBERGII SEEDLINGS—Largest stock in the world.

BARBERRY THUNBERGII—3 year 2-3 ft., 18-24 in., 18 in., 12-18 in.

CALIFORNIA PRIVET—2 year well branched, 3-4 ft and 2-3 ft.

Imported Fruit and Rose Stock, quoted f. o. b. Manchester.

FRENCH APPLES—No. 1 grade, 7-12.

FRENCH MANETTI—5-9

ENGLISH MANETTI—5-9

Write for Bulletin, giving quantities and prices.

## SELLING STUNTS

Apparently the Wilson Seed Store at Columbus, Ohio, has a very live wire in H. K. Wilson, in active charge of the store. Mr. Wilson not only handles flowers but also fruit, seeds and nursery stock. In addition he sells gold fish and canary birds, and boards canaries while their owners are absent from town. Now he is to put in fancy fruit in conjunction with the cut flower department, believing that a combination of fruit and flowers will make an especially acceptable gift, particularly for hospitals. He points out that many striking combinations of color and beauty can be obtained by a combination of fruit and flowers in baskets.

Mr. Wilson is somewhat of a diplomat, as was evidenced by his handling of a kick on a Christmas delivery. The driver on one of the automobiles, at the rush period of Christmas, thoughtlessly left a window in the truck open and a few Xmas shipments were frozen. After carefully explaining to the disgruntled customer how the accident occurred, Mr. Wilson suggested that he would replace this by a New Year's delivery to equal or better the original order. It is needless to say that the customer was pleased and that the replacement of this order was not a dead loss.

Christmas business was so good in the cut flower department that Mr. Wilson and quite a few of his assistants worked through a straight forty-two hour stretch. As Mr. Wilson said, with the combination of lines that he handles, there was not an idle day in 1920 and he is working toward even a better year in 1921.

## ARTIFICIAL FLOWERS

### Charles Robinson Contends that They Help the Florist

"I find considerable discussion in the trade press just now about artificial flowers," said Mr. Charles Robinson, of the Henry M. Robinson Co., Boston, the other day. "Now, we are florists, handling an enormous amount of flowers, as well as ferns and other greens. At the same time we manufacture and sell a vast quantity of artificial flowers, which we have perfected to a remarkable degree. Now, as far as I am concerned, I cannot see that there is any serious conflict between the two branches."

Mr. Robinson then picked up a bunch of roses, carnations and sweet peas made at the Robinson factory. "These things," said he, "are certainly beautiful in their way, and I have no doubt that they bring cheer and com-

fort to many people who are not in a position to afford fresh flowers. There are times when fresh flowers are out of the reach of poor people, as every body knows. Then they have recourse to the artificial flowers and are made happy.

"There is another point, and an important one, I think," Mr. Robinson then continued. "We find that the sale of artificial flowers really stimulates the sale of our fresh flowers. People who have bought the imitation soon want the real. Artificial flowers in the home create a desire which has not been felt before. The result is that a new customer for fresh flowers is made.

"I honestly believe that many new buyers of fresh flowers are created by the use of artificial material, so that instead of condemning artificial flowers, florists, I think, should really approve their use under proper conditions. I believe that in the long run florists who sell only fresh flowers will make more money because of the boom which has been given to artificial material since the latter has been improved to its present degree. This, of course, is only my personal opinion, but that is how I feel about the matter, and I find that other thoughtful men in the business agree with me."

## FLOWER SOCIETIES

It has been suggested by Mr. John C. Wister, the president of the American Iris Society and the secretary of the American Rose Society, that the different Flower Societies, such as the Sweet Pea, Gladiolus, Dahlia, and others, have a representative member from the Woman's National Farm and Garden Association, so that their work may be mutually strengthened and encouraged.

The interest which Mrs George W. Crocker has taken in her beautiful rose garden in Marion, and her position as president of the New England Branch of the Woman's National Farm and Garden Association, make her a fitting representative for that association in the Rose Society. While at Hillcrest Gardens there is such an excellent opportunity by the brook in its wild garden to naturalize the iris that Miss M. R. Case is interested to do what she can to increase the cultivation of this beautiful flower.

If the other Flower Societies would be interested to avail themselves of Mr. Wister's suggestion that a member of the Woman's National Farm and Garden Association join their societies will they kindly send notice to Miss M. R. Case, Hillcrest Gardens, Weston, Mass.

**Five Presidents** Honors continue to come to Boston. If the ball keeps rolling this way this section can soon organize a society of presidents. The list as it now stands is as follows:

Thomas Roland, president of the Society of American Florists.

W. D. Howard, president of the American Carnation Society.

W. N. Craig, president of the National Gardeners' Association.

John Farquhar, president of the New England Nurserymen's Association.

Samuel Goddard, president of the New England Growers' Association.

Here is a coincidence such as probably will not come again in Boston or any other city for a hundred years. Is the trade to miss the opportunity? Why not a joint reception and banquet—a monster combination of affairs? It would be one of the biggest events in the horticultural history of New England. The rose show in April offers a fitting date. Is it a go?

**New Carnations** One of the interesting points made by Charles N. Johnson, the retiring president of the American Carnation Society, at Washington, in his annual address was the desirability of originating carnations of better quality than any on the market at the present time. He gave due credit to the carnation men of the country who have produced new and better varieties in the past, but emphasized the fact that the American Carnation Society, in order to accomplish the purpose intended by the early workers, must not rest on the record of the past, but push on towards greater achievements. This means that the younger men in the business must be as ambitious as were their fathers.

"The carnations of the day are good," said President Johnson, "but are they good enough? Are the members satisfied with their productiveness and with the prices obtained for the blooms?"

The latter question is one which is not readily answered. Prices differ greatly at different seasons, in different parts of the country and for different varieties. During the Christmas season Laddie sometimes brought almost as much as a good rose, but whether Laddie and the other carnations of the day are as productive as they might be is quite another question.

Mr. Johnson seemed to believe, and probably he is right, that this is an opportune time for the introduction of varieties possessing the qualities of good clear color and greater productiveness. Although he did not mention the matter, it seems to us that fragrance should not be omitted. Some florists seem to think that perfume doesn't make much difference in a sale, but it is our experience that the public as a rule prefers a carnation which possesses abundant fragrance, provided it is of good color and a good keeper.

**Peony Discards** President Wister, of the American Peony, Society, has started a campaign for discarding a large proportion of the peony varieties now on the market. Probably there will be a good many dissenting opinions when the list of varieties which he believes should be done away with is published, but on the whole it is pretty likely that President Wister's plan will meet general approval. It is conceded to be a fact that the number of peony varieties is very much larger than it ought to be, and that a proper classification cannot readily be made, or difficulties in nomenclature removed, until an action of this kind is taken.

**Gladiolus Outlook** Much interest has been aroused by the announcement in the last number of Horticulture that a large proportion of the flowers to be exhibited at the National Gladiolus Show next August at St. Thomas, Ontario, will be grown on the grounds surrounding the exhibition hall. It was a distinct departure to go out of the country for this show, and a real innovation to plant trial gardens with the best varieties contributed by growers from all over the continent.

Apparently the gladiolus people are going to be very active the coming year. Not only are plans being laid for an unusually big show at St. Thomas, but the smaller shows are not being overlooked. The one at Boston bids fair to surpass any previous exhibit and the local societies throughout the country are showing a keen interest in their favorite flower.

**The Alphabet of Results**

B Stands for—
BETTER BUSINESS; At present it
BEHOOVES every man to face conditions squarely and
BUCKLE down in persistent effort to
BRING the little wanderer
BACK into the fold. It is
BETTER to do a little coaxing
BY the use of consistent advertising than to sit
BACK in an easy chair and
BE content with orders that drift in. The
BENEFITS of advertising are three-fold. Advertising
BRINGS immediate orders, sells surplus stocks and
BUILDS future prestige as well.
BETTER BUSINESS and larger sales are
BECKONING to you. Take them
BY the hands and make them your
BOSOM friends, for 1921 will reward fighters.

—With apologies to the Seed World.

Judge Marean
Less than ½ Natural Size

# *Eclipsed!*

THOUGH awarded Gold Medals wherever exhibited (in non-competitive way) Marean Dahlias do not need this visible sign of man's recognition of merit. Supreme creations of a sublime flower, they will be a monument to a man's love for the Dahlia, when scores of now popular standards will be but a memory.

Marean Dahlias are sold by the House of Scheepers exclusively at prices that reflect the efforts it took to create them. A beautifully printed book, showing some of the flowers in natural colors and size, is available for true Dahlia hobbyists desiring the best regardless of cost.

May we hope to count you among those who, this coming year, will share the delights of exclusive Dahlia connoisseurs everywhere?

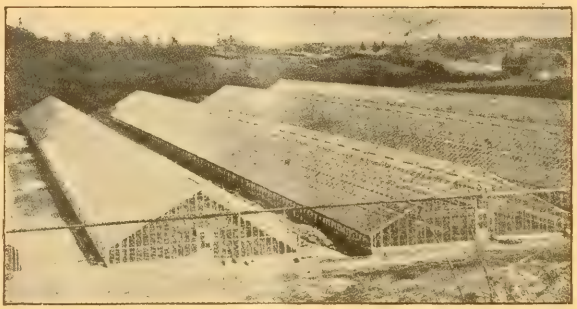
## S. A. F. & O. H. Department

### PLANS FOR THE FLOWER SHOW

With less than five weeks intervening between the present and the opening date of the Show, arrangements as regards both competitive and trade exhibits are wonderfully complete in all the main details. The big private estates are this year taking more than ordinary interest in the exhibition, and the group displays promise to be finer than at any previous Show.



One or two novelty classes are featured this year. There is a class for "A bird bath, with a planting arrangement at base not to exceed 3 ft. in diameter." This class, which is open to all, does not appear in the official final schedule, but is an extra, the prize for which is offered by the Garden Club of America.

Another extra class is to be known as the "Window Box Class." This also is an open class, and should particularly attract florists. The public generally should be interested in window boxes, especially that portion of it having house fronts but no gardens. It has been arranged that the window boxes staged in this class be given the utmost prominence; in fact, it is practically decided to place them upon the ledges about the stairways of the principal entrance, thus insuring that all visitors shall see them.

A third extra feature is one, which, for want of a better name just now, may be called the "Back Yard Garden," although "Forecourt Garden" might be just as appropriate. This display will be of the "before and after" character, showing conditions with and without a garden. Specially painted backgrounds will be relied on for effect in this case, one of them supplemented with a real garden planting.

Florists having novelties in the way of Roses, Carnations, Sweet Peas, or any other flowers are urged to make stagings in the classes provided. Many hundreds of florists from all sections of the country make a point

**STROUT'S, Inc.** Biddeford, Maine

of visiting this Show and will be interested in such stagings.

The classes for decorated tables are confined to private and amateur growers. This year there is to be a competition on each day of the Show excepting the last.

The Tea Garden will again be a leading feature, and in it various social functions have been planned to take place. This year the garden will be located at the western end of the main floor.

With the Tea Garden location thus changed, a lot of very desirable space becomes available for trade exhibits on the second floor Lexington avenue front. At previous shows many would-be exhibitors have expressed desires for locations in this section of the building, which is easily approached and in many respects fully as desirable as some of the locations on the main floor.

The trade section of the Show will be quite as extensive as that of any previous show, if not more so. Most of the "regulars" are in the list of exhibitors, and there are several newcomers.

JOHN YOUNG, Sec.

### WESTCHESTER AND FAIRFIELD SOCIETY

The Westchester and Fairfield, N. Y., Society got together last month and celebrated the tenth year of its foundation by attending a banquet at the Lawrence's Inn, in Mamaroneck. It was to be a great secret, but, like all secrets, it leaked out and gardeners from all over the country and New Jersey came in great flocks to attend the ceremony. It was a great feast as far as anatomy and oratory are concerned. The good eaters had a chance for a good fill, and the good talkers, the pleasure to be heard from.

J. H. Troy was toastmaster, nuf' said. A. Herrington of Winn's farm made a great plea for the coming New York flower show, which plea was made still stronger by our friend, Joseph Manda. Mr. Smith explained the workings of the farm bureau. Mr. M. C. Ebel spoke of the doings of the National Association, announcing the next Convention to be held in New York City this fall. Mr. C. Baxter compared the gardeners to angels, and Mr. Mitchel was at his best in his well rendered songs.

It was a real old-fashioned gathering that will ever be remembered by all. Credit is due to our young friend Sealey for making all arrangements, and to our friends, Stuart and Williamson, for the decorations.

## George Watson's Corner

"You in your small corner and me in mine."

Frank M. Ross and his party arrived home recently from their trip to the West Indies. Among other interesting points on their itinerary was Porto Rico—1000 miles from Key West—where they had the pleasure of a visit with our old friend Robert Craig who is now located there in a business way as well as to enjoy summer during winter. Mr. Ross looks well and hearty, and enjoyed the trip very much.

We hear that the noted wholesale florist, Samuel S. Pennock, head of the S. S. Pennock Company, is contemplating a six months' trip to Europe this summer. We understand his object is to be largely of a sympathetic nature in behalf of the suffering population of the various countries he will visit. With the backing of The Friends' Relief Service and the friendly spirit of Philadelphia—in many guises—the spirit of Brotherly Love will find some keen common sense expression, which is greatly needed in these trying times.

The reason given by the retired rose grower, John Burton for not coming to town very often to see his friends, is because there are so many hold-ups on Market street. He thinks he needs a bodyguard to get him safely down to Dooners at 10th and Chestnut—a distance of three blocks. We will have to speak to his good friend the Mayor the Hon. J. Hampton Moore—that is if he has got back yet from Palm Beach.

John C. Gracey has sold his building on the old Plender place to the Public Ledger Co.

This one is respectfully referred to my good friend P. Welch of Boston:

Questions Anatomical

Where can a man buy a cap for his knee?
Or, a key for a lock of his hair?
Or, can his eyes be an Academy—
Because there are pupils there?
In the crown of his head, what gems are found there?
Who travels the bridge of his nose?
Does the calf of his leg become hungry at times
And devour the corns on his toes?
Can the crook of his elbow be sent to jail?

Where's the shade from the palm of his hand?
How does he sharpen his shoulder blades?

I'll be hanged if I understand.

Mr. Welch has always been noted as a keen anatomist of any argument—even old Larry Cotter had to take his hat off to him—so I would like to have a succinct reply to each query—worthy of Boston Common at 2 a. m.

## OBJECTS OF THE S. A. F.

### Pres. Roland's Interesting Address Before the Gardeners' and Florists' Club

It is doubtful if many members of the S. A. F., except perhaps the Old Guard, are familiar with the unusual history and the high aims of the S. A. F. For that reason the address made by Pres. Thomas Roland at the banquet of the Gardeners' and Florists' Club of Boston Thursday night was heard with special interest. In part Mr. Roland said:

"The Society of American Florists and Ornamental Horticulturists is not an old organization compared to some others in our country. It was founded less than forty years ago and granted a special charter by Congress which was approved by President McKinley in 1901. If I am correctly informed, it is the only horticultural society having a federal charter from our National government. It was not, as too commonly supposed, intended as a purely trade organization. It was founded for the development and advancement of floriculture and horticulture in all its branches; to co-operate with National and State governments and organizations in disseminating horticultural knowledge. This shows that the society was conceived upon a broad and liberal foundation.

"The society has for many years been active in creating and stimulating an interest in school gardens and much good has resulted, I am sure. Some day the society hopes to have funds to put into effect a broad liberal scheme of education to assist young men of promise, who want to follow our profession. But, as you all well know, an undertaking of this sort involves large funds which take many years to acquire.

"The society's permanent fund now amounts to $50,000 and I believe the near future will see it climb upward to $100,000—for I am sure that, as the ideals and aims of the society are more fully understood, all lovers of horticulture will be ready to assist it in some way to achieve its aims.

"The society's membership is, I believe, close to 4000, over 1500 being life members. This does not include the members of affiliated societies, which run into many thousands more. The American Rose Society, one of the affiliated societies, has, I believe, about 3000 members. In all there are thirteen State and National Societies affiliated with the Society of American Florists and all of these bodies are represented upon the Board of Directors of the Parent Society—usually by the president, who has the power to raise and discuss and vote on all matters dealt with by the Board of Directors. One can readily see the great advantages, in many ways, through such co-operated effort in acting upon questions of local and national importance.

"As most of you already know, plans are well under way for another great National Flower Show, to be held in Cleveland in 1922 from March 25th to April 1st. I think everyone will agree, all things considered, that the great exhibitions given by the society have never been surpassed. The society has but one motive in them—to create and extend a love and interest in plants and flowers among all the people. To plan and execute all arrangements for one of these great shows means a great deal of work—practically all of which is a 'labor of love' on the part of those on whose shoulders the bulk of it falls. The estimated expense for the Cleveland exhibition is $50,000. In order to cover any loss, a guarantee fund of $20,000 is now being raised, thus safeguarding the society's permanent fund against loss.

"I hope the time is not far distant when the Society of American Florists will have the benefit and advantage that would come to it from the service of your own esteemed president as one of its affiliated directors, and I am sure the gain would not be all upon one side; because the club's representative, in rubbing shoulders, and exchanging ideas, with men from every part of our country, would surely bring back to you things worth while—and things important to this club."

## NEWS NOTES

Miss Marion Roby Case, of Hillcrest Farm, Weston, Mass., a prominent member of the Massachusetts Horticultural Society and a frequent contributor to Horticulture, has just gone to California for a six weeks' trip.

Simon Mickels, a Boston florist, was recently married to Miss Aida R. Bloomberg. They will make their home in Brookline.

## Flowers Under Glass

If you use houses of the three-quarter type,—and all florists cannot have modern houses,—be sure that the backs are good. Oftentimes you can keep your houses very much warmer by applying a layer of heavy roofing paper. Have plenty of laps at the joints, and get the paper as smooth as possible so that it will not rub off when a wind storm comes. If there are any open spaces in the back it will be a good plan to cover it first with roofing paper, then with several thicknesses of newspapers and roofing paper again on the outside.

Leaks from steam are oftentimes costly and annoying. If you have to fill the boilers often you can be sure that there is a leak somewhere. Make sure that the valves are all well packed, and repair all breaks in the pipes as soon as you find them. A surprisingly large amount of steam will escape through one poorly packed valve, and when there are many such valves the loss is sure to be considerable. Use asbestos rope if you want to be sure that they will stay packed as they should. Some growers make a point of packing their flange unions with tar paper, which makes a very good substitute for rubber. In some cases the paper seems to work better than rubber, and, of course, is cheaper. Paper gets soft, though, and the tar may ooze out. Moreover, if the union is not kept tightened the paper may blow out. Two thicknesses of one-ply paper, or one thickness of 2- or 3-ply work well. Tighten the flanges after the steam has been turned on, and continue to do so for several days. After that they will give you no more trouble.

The time to do your syringing at this season of the year is early in the morning on nice clear days, and the plants will have plenty of time to dry out. Ventilate as usual, for it is a mistake to try to keep the house warm by shutting down the ventilators all the morning. After each syringing and after watering use plenty of air-slaked lime beneath the plants, as it will help to dry out the air and prevent black spot.

## GREENHOUSE OUTLOOK

### Mr. Curtis of the Foley Company Sees Good Business Ahead

"What is the outlook for greenhouse building?"

This question was put to Mr. C. Curtis, of the Foley Greenhouse Company, Chicago, and doubtless Mr. Curtis' answer sums up the general opinion of greenhouse men throughout the country. He said:

"Due to War conditions in the last four years, the shortage of greenhouse space has had its effect on retail florists and growers, causing the demand for flowers to greatly exceed the supply in 1920. From all reports the year was a profitable one, ending with a large rush of business, due, no doubt, to several causes.

"The buying public at Christmas time and New Years turned to flowers, as they make a fine display for the money. The normal growth in the demand for flowers in the last four years has had its effect, and the laying of quarantine No. 37 has created a severe shortage in some lines.

"Another factor which it might be well to mention is the National Advertising Campaign, carried on by the Retail Florists. I believe it has had a great effect in educating the public to the value of flowers for beautifying their homes, as well as an ornament of daily wear.

"The only answer seems to be more greenhouses. We have had a good volume of inquiries and look for a substantial year in building operations as we approach warm weather, advising our friends to prepare plans for additions to their ranges at an early date to get their share of the business, which we feel is here to stay.

"Along with other lines of business we have had a readjustment in prices to a certain extent, and are prepared to give real values in quality as usual, but no buyer should expect all lines to reach pre-war level, and we believe if the grower will carefully analyze the market and get his plans in shape to build at an early date, if he contemplates building at all, he will participate so much quicker in the profits of the increased demands in his business. He will find if he delays too long he will be held up on building operations, due to a great number of people endeavoring to get their work

completed on short notice. All these things taken together have caused the demand to greatly exceed the supply, creating a seller's market and higher prices.

"Many of the growers are becoming aware of these facts and realize they will be at the tail end of the procession unless they complete their building plans at an early date."

## CALIFORNIAN SWEET PEA SEED

The total acreage planted to Sweet Peas for the production of seed last year is estimated by growers and dealers to be about 2,000 acres, compared with 1,500 acres in 1919, about 550 acres of which were Spencers and 950 acres grandifloras, both including mixtures, according to Government report of September 25th. Because of a decreasing demand for grandifloras most of the acreage this year is of the Spencer type.

A portion of the crop in California was a failure because of lack of moisture during the Winter and Spring months and the prevalence of aphids during the Summer. The average yield per acre of Spencer Sweet Peas ranges from 300 to 500 pounds, and of grandifloras 500 to 800 pounds, and the total production in a normal year is estimated to be 600,000 pounds. About one-fourth of this total production is said to be exported, mostly to England.

The many friends of Harry N. Kelley, of 68 Henry street, Cambridge, long a well known florist of Pemberton Square, Boston, will regret to hear of his death after a short illness.

Of nearly all of the standard commercial varieties and some of the best new things. Sizes mostly ⅜ to ½ in. and ½ to ¾ in. Also bulblets for sale. Write me for quotations, stating quantity you can use.
Robert R. Walker, Mansfield, Mass.

When Writing to Advertisers Please Mention Horticulture

### HORTICULTURAL BOOKS

EVERY GLADIOLUS GROWER, SEEDSMAN, NURSERYMAN or FLORIST who has but limited space at hand for growing purposes and wishes to realize the HIGHEST POSSIBLE YIELD in FLOWERS, BULBS and DOLLARS per SQUARE FOOT should have a copy of my new book, "THE GLADIOLUS FOR PROFIT." Every detail connected with the outdoor growing of these bulbs for the GREATEST PROFIT is given. Illustrated with twelve halftones from actual photographs showing my intensive system of culture that BRINGS THE PROFIT. A special chapter on DAHLIAS showing the PROFIT WAY to grow these for cut flowers and bulbs and, most important of all, WHAT VARIETIES to grow in the MIDDLE WEST in order to get a crop and the money EVERY YEAR. The merits of ONE HUNDRED and THIRTY varieties of Gladioli are cussed and discussed and the MONEY MAKERS POINTED OUT. There is good money growing the Gladiolus if you START RIGHT, and this book will START YOU RIGHT. Satisfaction or your money back. Mailed postpaid anywhere upon receipt of $1.00. R. M. Champe, Oakland Gardens Nursery, Walled Lake, Mich. Address all letters until April 15, next, to me at my southern plant farm, Box 412, St. Petersburg, Fla.

### PETUNIAS

PETUNIAS.

Diener's Ruffled Monsters, single. The largest and most beautiful ruffled variety of Petunias in existence. Ruffled Monster seed in separate colors, pink, red, variegated, white, red with black center, pale lilac, and all colors mixed.

The following somewhat smaller than the Ruffled Monsters; Pearl of Kentfield, flesh pink frilled, dwarf, purple or blue and white frilled.

Price per package, 50c

Catalogue will be sent free on request. Write for it today.

Mr. W. L. Ferguson, Smiths Falls, Ontario, under date of Dec. 2, 1919, writes us the following in regard to our Petunias:

"Last year I purchased Petunia seed from you. I think every seed germinated and the blooms were the finest ever seen in this part of Canada. Only about 8 per cent of the plants could be classed as common. I want more of the same quality each year."

Mr. Rudolph Nagel, Lancaster, Pa., under date of Dec. 14, 1919, writes us:

"I had, last year, just a few of your Petunias, but I am sure I could have sold thousands of them. They surely came up to your claim and way ahead of my expectation."

RICHARD DIENER CO., INC.
Kentfield, Cal.

GLADIOLI.

Jack London, Anna Eberius, Thomas T. Kent and Mrs. H. E. Bothin; the four greatest and most perfect Gladioli in existence. 34 Union Stock Yard, Chicago

This simple line sketch shows you the truss stiffening rod running under the ridge between each rafter.

At the left you have a cross section of ridge midway between rafters, showing you the secondary rafter and truss strut.

# Hitching Stiffeners For Ridge And Roof

Spacing rafters 12′-1½″ apart is one thing. Making the frame just as stiff and strong as when the spacing was 8′-4″ is quite another. Take the question of rafters alone, in say a house 200 feet long. In the narrow spacing 25 pairs of rafters are used. In the wide spacing, there are 17 or 8 less pairs.

When you take rafters out of a greenhouse construction, it's a pretty serious matter. That strength must be put back some other way. To do it, we first use deeper rafters. Then we use heavier purlins, secured to the rafters by an extra long fitting, extending the depth of the rafters and well out on the purlin itself.

Look carefully and you can see the secondary rafter and sag rod running from it through the purlins to the eave and secondary post.

The ridge is stiffened and held straight and true by a truss rod running between every pair of rafters. Running from it perpendicular to the eave, and through each purlin, is a sag rod.

To overcome any possibility of eave sag, a secondary post is placed midway between the regular posts. The combined result of all of which is, that the wide spaced house as we build it, is just as strong as the old spacing and the house is decidely **lighter.** Just as strong and lighter. That's what you are looking for, isn't it? You know we go anywhere for business. Or to talk business.

## COMING BOSTON SHOWS

### Program of the Massachusetts Horticultural Society

The Massachusetts Horticultural Society has a notable list of exhibitions scheduled for 1921. First and foremost is the great exhibition specializing in roses which has the co-operation of the American Rose Society. This is from Wednesday to Sunday inclusive, April 6th to 10th. This is to be the greatest rose show ever staged in this country, with a prize list larger than offered before, starting off with a $1000 first prize. Those who know the methods and aims of this society realize that this spring show will be a notable event in horticulture. There will be orchids also and the prize list contains much of interest to growers and exhibitors of other things. Those who remember the wonderful orchid show of last spring will know that something is on foot when the rosarians are on tiptoe to beat it.

The full list of shows follows:

April 6-10. Great Exhibition of Roses, Orchids and other Plants and Flowers.
May 28-29. Rock Garden and Other Plants.
June 4-5. Rhododendron Exhibition.
June 18-19. Paeony Exhibition.
June 25-26. Rose and Strawberry Exhibition.
July 9-10. Sweet Pea Exhibition.
Aug. 13-14. Gladiolus Exhibition.
Aug. 27-28. Products of Children's Gardens.
Sept. 10-11. Dahlia and Fruit Exhibitions.
Nov. 2-6. Great Autumn Exhibition of Chrysanthemums and Other Plants. Flowers, Fruits and Vegetables.

## NEWS ITEMS

At the March meeting of the Gardeners' and Florists' Club, of Boston, Mr. Robert Cameron, of Ipswich, will discuss annuals and a large attendance is expected.

At the last meeting of the Rhode Island Horticultural Society Mr. Douglas Eccleston, superintendent of Mr. A. C. Burrage's orchid greenhouses at Beverly Farms, lectured on the cultivation of orchids.

A petition in bankruptcy has been filed in the case of Leopold Holzman, a florist of Bridgeport, Conn., with liabilities placed at $597.00 and assets at $249.00.

Mr. Russell S. Codman has been elected president of the North Shore Horticultural Society, to succeed Mr. Frank P. Knight, who held the office for four terms.

Entered as second-class matter December 8, 1904, at the Post Office at Boston, Mass., under the Act of Congress of March 3, 1897.

Vol. XXXIII FEBRUARY 25, 1921 No. 4

## THE TALK OF THE TRADE

As I have remarked before, it is a good thing for florists not to be backward in coming forward in the matter of advertising their business by means of public talks. In many towns the Rotary Clubs are glad to have florists and nurserymen among others present their views on business matters. At a recent meeting of the Rotary Club at Canandaigua, N. Y., Mr. Edward A. Sick, who is an alderman as well as a florist, gave an interesting though brief review of the outstanding features of flower business with particular emphasis on the pests that beset the florists. He said the insects and worms that attack plants and flowers are legion and that practically all of them have to be hand picked as sprayings and other treatment do not seem to be effective.

Mr. Sick gave enlightening information as to the weather troubles besetting the florist, telling how sudden changes, up or down, are likely to ruin many thousands of seedlings and tender shoots.

To the widespread use of the slogan "Say It With Flowers," Mr. Sick attributes the fact that more than $35,000,000 was spent for flowers in America during the last year.

---

Much regret is felt in the trade at the recent death of Thomas Boothe deForest, secretary of the Lord & Burnham Co., who passed away at Dobbs Ferry after an illness of four weeks Mr. deForest was very widely known, and his career should be an inspiration to every young man entering business. About fifteen years ago, after finishing his education at Stevens Institute, Mr. deForest became a draughtsman to Lord & Burnham Co., and worked his way up by successive steps until he had become secretary of the company, as well as sales manager.

---

R. Vincent is very keen to do everything he can to push the sale of dahlias, and has printed a little card for use in the dahlia season, being distributed where it will do the most good. The card reads as follows:

**"Say It With Flowers"**

There are flowers that make us happy,
  There are flowers that makes us blue:
There are flowers that steal away the teardrop
  As the sunshine steals away the dew:
There are flowers that have a tender meaning
  That the eyes of love alone may see:
But the flowers that fill my heart with sunshine
  Are the Dahlias you sent to me.

Vincent's Dahlias fill our needs. Get them fresh daily at Baltimore Florists

---

Mr. James Wheeler, Mr. William Stickel, Mr. George Butterworth, Mr. Andrew Christensen and Mr. Herman Barsch were among the other members who spoke on matters of interest to the association. Mr. W. N. Craig also said a few words and Mr. E. I. Farrington brought up the matter of a joint banquet in honor of the three national presidents, Mr. Roland, Mr. Howard and Mr. Craig.

It was decided to have another meeting at the same place in March, and the hope was expressed that a large number of growers from all over eastern New England would be present..

---

"Pungent with the odor of exquisite blooms and presenting a picture rivaled only by an Oriental garden, the Anderson florist shop at 440 Main street, recently remodeled and enlarged, was given a formal opening yesterday." This is the way in which a local paper paid tribute to the enterprise of the well known florist of Buffalo. Pretty good advertising, I call it. The new shop is of delicate design, being patterned after the Adam period of English art. Deep ivory tint is the color of the walls while the arched ceiling and the medallion work have been done in robin's egg blue. The incidental furniture about the shop is in keeping with the main design. The Anderson store is an old one in Buffalo. In 1872 Elias and Daniel Long started a flower shop and continued until 1896, when Mr. Anderson purchased it. Seven years later the place was remodeled and recently was done over again. To preserve the beautiful and many rare flowers in perfect condition, Mr. Anderson has installed a refrigerating system

---

Mr. F. E. Palmer, of Brookline, has had on display for the past week a remarkable specimen of Acacia pubescens which has attracted many visitors to his greenhouses. This acacia

The Largest Acacia in New England

is about twenty years old, and has been in the ground fifteen years. Mr. Palmer claims that it is the largest acacia in New England, and probably he is right. It certainly is a noble specimen, measuring eighteen or twenty feet in diameter and filling one end of the greenhouse where it is planted. Each visitor has been given a spray of the acacia, which in itself has been a good advertising feature.

---

What a cheerful lot of people I met on a recent Canadian trip. All lines of business seem to be prospering there, and the florists seem to be getting every bit of their share. I had never before this time had the opportunity of visiting many of the Canadian florists, and this trip my time was confined to right around Montreal, but I was greatly impressed with the stores and growing establishments. Montreal must have a large flower buying public. The florist stores there are top notch, according to my mind,—a lot of real first class stores. In fact, I didn't see a poorly kept one in Montreal.

The quality of goods they have on display is of the best, and while their cut flowers are all that could be asked for, I was particularly impressed with the quality and quantity of the plant stock. The stores are filled with excellently grown plants, but what struck me with the greatest force was the fine axaleas and spiraeas in the greenhouses. They certainly are in luck to be able to get such stock as this.

All the florists I spoke to around Montreal expressed themselves as being well satisfied with the business they are doing, saying that it was even ahead of the previous year, and they thought they had done very well then. The public doesn't seem to rebel against prices charged, and these prices are fully up to anything asked in the best stores in the States. The stores and greenhouses of Hall & Robinson, and of McKenna in particular, showed a very prosperous condition, and they are exceptionally well prepared for good Easter business.

The outlook for lilies for Easter in my mind is for a fair supply. I don't think there'll be any over supply, and I believe that they will bring at wholesale 25 cents for high. I have talked with some growers who think that 20 cents will come pretty near striking the better average, but I have found several lots which will not be brought on in time, and that of course tends to reduce the supply. And in a number of cases among the large growers, unless weather is just what they need, they will lose a batch of their stock, or at least they'll fail to get it in for Easter. Lilies are looking very good, particularly with the specialists such as Frank Edgar, William Edgar, A. Leuthy Co. and the Leominster Floral Co. It does seem to me, however, that they don't carry quite so many buds to the plant as we would like. It may be possible that this is because of so many more of the smaller sized bulbs being grown. It wasn't possible to get the full quantities wanted of 8-10's and 9-10's last year, and for that reason the stock is composed of mostly 7-9 size, I think, though, that the Giganteums are more than average in the way of healthy stock. There has been a small amount of throw-outs.

---

## A. N. PIERSON'S BIG ESTABLISHMENT

### An Interesting Description of Cromwell Gardens and Their Development

In a recent issue of the Middletown, Conn., Press appears an extensive article devoted to Cromwell Gardens, of A. N. Pierson, stating that these gardens constitute one of the beauty spots of Connecticut. The article says in part:

In 1871, A. N. Pierson first came to Cromwell as a gardener and engaged his services to a resident of Cromwell. In 1872, he purchased a small plot of ground on the present site of the now vast holdings.

A. N. Pierson, Inc., employes a force of three hundred persons, many of whom it cares for in its own homes. Its main and only offices are situated at the plant in Cromwell.

The following figures are significant: The company handles 247,000 roses for cut-flower purposes; 60,000 carnations; 200,000 chrysanthemums. They force 1,000,000 lilies-of-the-valley, of which 400,000 are native grown and 600,000, imported from Germany. They purchase 100,000 Easter lilies annually from Japan, of which 37,000 are planted for sale at the Easter season, while the balance are kept in cold storage for use during the remainder of the year. For Easter alone they raise 10,000 roses in pots of the climbing and baby rambler varieties.

The company also does a big business in growing young stock for sale to other greenhouses. This year 700,000 rose plants will be grafted on manetti stocks (wild rose) for hot house purposes; 100,000 Japanese multiflora will be grown for outside use. This year they will sell to other greenhouses 700,000 rooted chrysanthemum cuttings.

In addition to the greenhouse and nursery business the company owns a large dairy herd of 100 milch cows, largely Holsteins. These are kept on the Portland farm and are in charge of five men. The farm also affords accommodation for twenty-four horses and fifteen auto trucks, used in hauling loam, stock, etc. The milk is disposed of to the Millbrook Dairy company.

In these present days of high priced, hard-to-get coal, it is interesting to note that A. N. Pierson, Inc., burns 10,000 tons of coal a year.

Labor is taken care of by the company in the most practical way. It provides fifty-eight rents, consisting of single and double houses. At the present time four new houses are being constructed. All of these are located in Cromwell. In addition the company operates a boarding house, known as "The Gardeners' Home," at which thirty-two men are now staying.

---

## MASSACHUSETTS NURSERYMEN'S ASSOCIATION

At the annual meeting of the Massachusetts Nurserymen's Association the following officers were elected: Julius Huerlin of South Braintree, president; Sheldon Robinson of Lexington, vice-president; William H. Thurlow of West Newbury, secretary-treasurer; members of the executive committee, J. J. McManmon of Lowell, G. H. Frost of West Newton, James Brandley of Walpole, Donald Wyman of North Abington. A dinner was held and an address made by Superintendent Christian Van der Voet, of the Arnold Arboretum.

The Massachusetts' Nurserymen's Association is a live organization and Pres. Heurlin promises an active administration, as he is always abreast of the times. Mr. Heurlin explains the purposes of the association as follows:

To increase buying and exchanging between members to the largest extent.

To assert and prove that Massachusetts stock grown by Massachusetts men is 100% good stock.

To refrain from importing stock, even when permits can be obtained, except new things.

To have a committee (perhaps in conjunction with the Massachusetts Horticulture Society Committee on plants and flowers) before which new plants and flowers, originated or introduced by the members, can be shown, also a committee of complaints, to which all differences and misunderstandings can be referred for settlement.

Also to maintain the highest standard of Massachusetts Nursery stock and Massachusetts nursery men.

### GREENHOUSES AND SEED STORES

#### How One May Serve as an Adjunct to the Other

A writer in the Seed World counsels seedsmen to operate greenhouses as an adjunct to their stores, telling them that it is not only a source of profit but results in considerable sal vage. He says:

"Constant handling of plants, offered for sale under adverse conditions of temperature and light, necessarily means deterioration in the appearonce of the plant. This can be remedied only by returning it to the proper environment for restoration of its freshness and vigor.

"The cost of vegetable plants to many seedsmen is a considerable item. A few hot beds in connection with the greenhouse cost very little to install and are a large source of revenue in spring. Surplus labor around the seed store during dull days in the summer can be used to good advantage at the greenhouse, and this work is educational in itself to the average seed store employee.

"Having fresh plants to decorate the windows of the store at all seasons of the year is a big help toward attractive display. Bulbs can be forced into early bloom, so that the bulbs and flowers can be displayed in the same exhibit, resulting in many sales. Tests of germination and purity can be made in the greenhouse under favorable conditions for best results. When a doubt as to purity arises, in many instances this can be settled, between the receipt of the seed in fall and the time of filling orders in early spring. While a sample stock of plants can be carried in the store, many sales can increase by inducing the customers to visit the greenhouse.

"It is not advisable to install a large, expensive plant to start, but we do recommend the building of a modern unit that can be added to from time to time. The important point that arises at the outset is the character or type of heating plant to be installed, as all future additions are more or less dependent on the expansibility of the heating plant.

"Technical advice on this subject can be readily secured from many of the greenhouse construction companies who employ expert heating engineers for the express purpose of solving any problems that may arise. The proper planning of the ground and houses cannot be over-emphasized as success is in a large measure dependent upon exposure, location of the heating plant and other important principles."

### RHODE ISLAND NURSERYMEN

Charles W. Morey, of Woonsocket, has been re-elected president of the Rhode Island Nurserymen's Association. At the annual convention it was voted to continue the committee appointed to obtain legislation for mending the agricultural laws of the state so as to provide for the appointment of a permanent entomologist.

Prof. E. K. Thomas, head of the recently established agricultural department of the Rhode Island Hospital Trust Co., said that it was hoped to have all agricultural interests in the state benefited by the work of this department. Paul B. Fortmiller, of Jackson and Perkins, talked on the present and future demand for nursery stock.

# Men I Like To Meet

MR.. A. F. J. BAUR

Now that the carnation convention is over, the members again have good cause to realize how much the American Carnation Society owes to A. F. J. Baur, its secretary. Baur never seems to get tired, always carries a pleasant word and invariably has a smile upon his face. Men who have the interests of the Carnation Society at heart are very sorry to learn that Mr. Baur is getting ready to relinquish the position which he has held so long. He told me recently that this would have to be his last year. We shall all be sorry to lose him. Let us hope that he will be made the president of the society next year, as this is certainly the least reward that can be paid him. But he won't be lost to the carnation men, I am sure, even when he finishes office holding. I know that no man could work as he has worked for that society without staying with it in heart and spirit after he goes out of office.

## NASSAU COUNTY HORTICULTURAL SOCIETY

At the last meeting of the Nassau County Horticultural Society in Pembrfoke Hall, Glen Cove, N. Y., Alex Michie, John Power, Frank Kyle, Daniel Conn, Herbert Bull, Tony Aguilino and John Kennedy were elected to active membership. Frank Watson, Jesse Frampston and Thos. Meech were appointed by President Noonan to judge the exhibits. Jack Henderson won first prize for the heads of lettuce and John F. Johnston won the

William Robinson special for twelve mushrooms. Jack Everett brought down a pot of freesia Mrs. Chas. Pike which was of great interest to the members. Harry Jones of Port Chester and John Griffin resigned as active members of the Society.

The annual dinner will be held on March 15. The committee reported progress on the Tulip Show and with good weather around tulip time we should have another record show. It was decided by the Society to take action regarding the destruction of shade trees in the city streets by linemen of the electric light companies. Mr. A. Herrington of Madison, N. J., gave us a very interesting talk about the International Flower Show to be held in New York, March 14-20. From Mr. Herrington's report it will be the greatest Flower Show ever held in America. Mr. Sperling of New York gave us a short talk on the Sweet Pea Show to be held in New York next June. Mr. Collins and Wallace of Boston also made a few remarks. Exhibits for March 9th meeting will be pot of tulips, 12 spikes of antirrhinum mixed and 3 heads of cauliflower.

ARTHUR COOK,
Cor. Sec'y.

The Springdale Floral Company, Inc., has recently been organized under the laws of Virginia and has arranged to reopen the nurseries at Springdale Farm, near Lincoln, Va., which have been closed since the entrance of this country in the late war. Fred B. Davis is president; Fred E. Green, vice-president and treasurer; Otto D. Ehnes, secretary and Charles E. Morganston, attorney.

# S. A. F. & O. H. Department

The annual meeting of the executive board of the society was held in the New Willard hotel, Washington, D. C., on January 24th and 25th.

The secretary presented his financial report for the year ending December 31st, 1920, showing, as summarized in the auditors' report attached, receipts from all sources for the year to have been $22,511.85. This amount was shown to be about one-half the amount collected for the year 1919, but this was largely accounted for by the fact of the reduction in receipts for life membership, only $745 being received during 1920, as against $24,550 in 1919. In the report of the auditors was a complimentary comment upon the completeness of the secretary's records. Disbursements by voucher totaled $25,875.46. A special statement was presented showing cost and income connected with the publication of the society's journay.

A separate report made by the secretary, as superintendent of the Trade Exhibition at Cleveland, showed a balance or profit amounting to $6,354.60. The reports were, on motion, accepted and approved. In the course of a discussion on financial matters, it was brought out that a seeming large increase in the expenses of the administration headquarters in the last two years had been due very largely to the drive for life members, the expenses covering which, including the engrossing and framing of certificates, and incidentals, had all to come from the general fund, while life membership fees all went into the permanent fund intact. The new life members numbered 1032, yielding over $25,000 to the permanent fund, and taking from the annual list a very large number of members whose dues were thus lost to the general fund. Mr. Asmus expressed the opinion that it could now be realized that the only way to increase the society's revenue would be to make a drive for new members.

Treasurer Hess presented his report covering receipts and disbursements for the year 1920, with credit certificates from the different banks as to the amounts on deposit. The report showed a balance on hand for the general fund of $651.55, and in the permanent fund, including investments, of $49,443.47.

There was a discussion as to whether or not a high tariff should be asked on Dutch bulbs as well as Gladioli. Mr. Asmus led the discussion, insist-

**W. Atlee Burpee Co.**
**Seed Growers Philadelphia**

ing that a high tariff would stabilize the bulb business for American growers and prevent the dumping of surpluses from Holland growers into the United States at prices vastly lower than the prices obtained by the same growers for their earlier shipments. This sort of competition, he said, was ruinous to florists who had bought their bulbs at the high prices.

Mr. Hendrickson moved that a duty of ten dollars per thousand be asked on Gladiolus bulbs. The motion was seconded by Mr. Hess. The motion was adopted unanimously. The matter of the Dutch bulbs was allowed to rest.

Mr. Asmus moved that a committee of five be appointed to gather data as to the feasibility of regulating the importation of bulbs, or to ascertain if there was a necessity for such regulation, and to report at the convention next August. Mr. Knoble seconded the motion, and it was carried

Mr. Kohout said that at the last meeting of the Flower Growers' Association of Chicago it was resolved to request that the S. A. F. and O. H. bar artificial flowers from its trade exhibitions at the coming convention in Washington—artificial flowers of paper, wax, or wood, not prepared foliage. Secretary Young stated that the same question was brought before the Minneapolis convention where it was beaten. It was a matter which had to come before the convention for ruling. Such flowers are barred from National flower shows, but it was considered that they were quite in order in a trade exhibtion.

GEO. YOUNG, Sec'y.

## NEWS NOTES

Last Saturday afternoon about fifty members of the Gardeners' and Florists' Club of Boston visited the greenhouses of Mr. William Sim, at Cliftondale, where they found a remarkably fine display of carnations, the houses devoted to Laddie and White Perfection arousing especial enthusiasm.

C. S. Strout, the well known carnation grower of Biddeford, Maine, has been making a trip through the south.

At the February meeting of the Worcester Horticultural Society Mr. E. I. Farrington, Editor of Horticulture, lectured on the Arnold Arboretum.

## IN DEFENCE OF DOROTHY PERKINS

I was greatly pained to read, the other day, in one of our leading dailies a most violent and uncalled for attack on a popular favorite. Perhaps I should say one who was popular, for, alas, favorites have their day, and no doubt this attack was but to demolish the reputation of the setting star and enhance that of a rising one. Still it was unnecessarily churlish; it criticised not only the color of her complexion, the exuberance of her presence, but her very name was held up to ridicule, the fault surely of her godparents.

There has been, not unnaturally, quite a sensation in her circle over this attack; Papa Gontier and Maman Cochet clasped each other's hands in sympathy and said, "What will people say next of us, a respectable and time-honored old couple, if they flout pretty popular little Dorothy Perkins? Of course, if people who live in a brand-new brick-red villa choose to invite Dorothy into their garden, one can't expect her to look her best; but, after all, there's only that languishing Stella Gray who can stand such a trial as that, and perhaps the stout Frau Druschki. She, poor thing, is quite out of favor just now—hardly mentioned in polite society. Quite under a cloud; in fact, a greeting from Teplitz is the only one she gets. Now, William Allen Richardson (there's a ridiculous long name, if you like) was saying only yesterday how grateful we should all feel to dear Dorothy, who never seems to mind the weather and cheers us up when all else fails. I must say I don't feel quite sure of William's sincerity, he is so very changeable, you know, and does not really care to be seen in Dorothy's company."

Pretty little Mme. Laurette Messime, was quite hanging her head about it all. "I live in harmony with all my neighbors," she simpered. "Ah, yes," flaunted Lady Gay in that unblushing manner of hers, "that's very easy to do for a colorless people." At this Caroline Testout turned quite pale and stuttered, "Well, Dorothy does scream so." "Hush, hush, my children," said the deep voice of the venerable Marshal Niel. Though yellow with extreme old age, the old gentleman bore himself proudly and his dress was glossy and clean. "We all have our place in the world. Let carping critics say what they please, whether it is Dorothy in her gay gown or Liberty in her revolutionary wear,

our showy American cousins, our well-beloved Scotch relations, or our Persian guests—they are all welcome, all beautiful." "Hear, hear!" murmured the other roses.

## ASPARAGUS PLUMOSUS FOR CUTTING

The elegant, feathery foliage of A. plumosus is now highly and justly prized for use with cut flowers in making up bouquets, sprays, wreaths, crosses, and other productions of the florists, says a writer in Gardening Illustrated. It has, indeed, to a great extent taken the place of the once indispensable Adiantum cuneatum or Maidenhair Fern, and, judiciously employed, the effect it produces is even more light and graceful than that of the latter, while another and highly important advantage is that the leaves or fronds retain a fresh appearance much longer when cut, and whether kept in water or not.

These charming fine-foliaged plants thrive best in the genial, moist atmosphere of a cool stove, intermediate-house, or warm greenhouse, where the temperature usually ranges somewhere between about 55 degs. and 75 degs. or 80 degs. Any good light loam, mixed with a fair proportion of peat or leaf-soil and sand, will grow them well; they also thrive in peat and sand only, but the more substantial compost is probably to be preferred.

But it is when planted out in a well-drained bed of suitable soil, in a warm house, with the growth trained to strings or wires a little distance from the roof, that their true beauty is seen, and in this way also a large quantity of material for cutting may best be obtained. The plants do not always begin to run at once, but as soon as the roots get a good hold of the fresh soil the new growths from the base rapidly become stronger, and soon commence to climb the wires or strings with considerable rapidity

As regards the propagation of these plants, cuttings formed of moderate sized branchlets, each with a slight heel, will usually root in well-drained pots of very sandy peat placed in a propagating frame or bed, but much the best and most vigorous plants are obtained from seed, which is freely produced by old and well-established examples, and germinates freely in a moderate hotbed.

There is some amount of misconception as to the dwarf form of A. plumosus, known as nanus. Among seedlings there is a considerable variation in habit, and some of the dwarfer forms were distributed as non-climbers. But all, or nearly all, will run sooner or later if grown strongly. This was told me years ago by the foreman of the nursery whence A. p. nanus was sent out, and I find it correct. I have, however, one plant of a tenuissimus that will not run at all, though divided more than once.

## NATIONAL ASSOCIATION OF GARDENERS

The National Association of Gardeners has engaged space at the New York Flower Show, to be held at Grand Central Palace, March 14 to 20, for a reception room and information bureau for the convenience of country estate owners. The secretary will be in attendance throughout the show to discuss any subject that may relate to the gardener or his profession, and the engaging of efficient gardeners for country estates.

A gardeners' conference under the auspices of the New England members of the association will be held at Horticultural Hall, Boston, on Thursday afternoon, April 7. This will be during the week of the Massachusetts Horticultural Society Spring Show, and Show of the American Rose Society. As many out of town gardeners will attend this show, a large attendance is looked for at the gardeners' conference.

A movement is on foot to organize a local branch of the National Association of Gardeners in Nassau County, (Long Island) N. Y., to promote the interest and the welfare of the profession and its members in that community by informing the country estate owners of the aims and purposes of the association, and by keeping them advised on the activities it is engaged in—in brief, to establish a more confident relation between the gardener and his employer.

Warburton, the florist of Fall River, has doubled the size of his retail establishment, and with new decorations and finishings now has one of the prettiest stores in southern New England.

# RAMBLING OBSERVATIONS OF A ROVING GARDENER

It is a pleasure to find nurserymen here and there who are stocking up with the novelties in the way of shrubs and trees which are being introduced through the Arnold Arboretum. In a recent talk with Mr. Richard M. Wyman, of the Framingham, Mass., Nurseries, I found, much to my surprise, that a number of plants which are considered hard to locate are growing in his fields. Among them are Sorbaria arboria glabrata, Phellodendron sachalinense, and ten or twelve varieties of Wilson's new Cotoneasters. The Sorbaria is an unusually good plant for use on large estates, being very effective either in mass planting or used alone. It is a shrub which ought to be recommended more frequently by landscape architects and there can be no question about the sale of cotoneasters as soon as the public becomes well informed about their unusual merits, especially those kinds which carry their red fruits in the fall.

---

I find that Mr. Wyman is also getting together a good stock of Azalea poukhanense, a remarkably fragrant azalea which Prof. J. G. Jack found in Korea, and Azalea Kaempferi, the discovery of Prof. Sargent, which, while not actually new to this country, has never been grown extensively in a commercial way. Several other azaleas are being propagated and for four years Mr. Wyman has been attempting to graft rhododendrons in order to get a good stock for New England. In the nursery rows are several thousand hybrid rhododendrons grown from seed which are to be sold by color after the first flowering season. It seems to me that this is a very good idea, and one which will appeal to the public, which in many instances cares much more for color than for a name.

I have mentioned only a few of the new things which are to be found at the Framingham Nurseries. The time is coming, I think, when Mr. Wyman's plant will become notable among the nurseries of the country because of the stock of worth-while new shrubs which it will catalogue.

---

Supt. Christian Van der Voet, of the Arnold Arboretum, in Boston, had occasion to speak at several recent conventions, among them the Massachusetts Nurserymen's Convention, the New England Nurserymen's Convention, and the Rhode Island Nurserymen's Convention. At all of these meetings Mr. Van der Voet emphasized the fact that nurserymen in general are failing to put out many very excellent shrubs which the Arnold Arboretum has tested and found good. At the Rhode Island meeting he gave a list of 125 varieties of flowering and decorative shrubs and trees which are suitable for this section of the country, and stated that only nineteen of them were listed in any of the commercial catalogues. He believed, however, that most of these plants could be propagated by the nurserymen of New England with profit.

Mr. Van der Voet aroused a great deal of interest in the newer things, and it seems quite probable that many of the nurserymen who heard him speak will be stimulated to propagate some of the varieties mentioned in a larger way.

---

I understand that Mr. Van der Voet caused some surprise at the meeting of the Massachusetts Nurserymen's Association, in Boston, by saying that in his opinion the action of the Federal Horticultural Board in putting a strict embargo on European plants was a good thing. He seemed to believe that this embargo will result in a disposition on the part of nurserymen in America to propagate the newer shrubs and trees on a larger scale, so that in the end the American buying public will be better off, and that nurserymen will ultimately be prepared to take care of the demand and really make more money than had been the case in the past. I am not quoting Mr. Van der Voet literally because I was not present. But I understand that while some of the members of the Association agreed with him,

Azalea Poukhavense Now Coming Into Commerce

others still felt that the drastic ruling of the Federal Horticultural Board should be at least amended.

Speaking of this board and its activities, it is interesting to find that it has now suspended the embargo so far as relates to the importation of azalea pontica and rhododendron pontica for propagation purposes. At a hearing in Washington it was represented to the board that these stocks were badly needed in this country, and could not be obtained here. For that reason they are to be admitted for the time being, or until a fair amount of stock is on hand. I doubt, though, if this will be a great boon to the nurseryment of New England, for A. ponticum is not very hardy, and azaleas grown on this stock are not likely to last very long when exposed to the rigors of winters such as New England often experiences. Farther south the situation will be different. As a matter of fact, it is very difficult to get good stock on which to work rhododendrons of any kind in the northern states. R. catawbiense can be used, but is difficult to handle.

At the banquet of the Gardeners' and Florists' Club of Boston, Mr. Robert Cameron, formerly in charge of the Harvard Botanical Garden and now superintendent of the famous Crane Estate at Ipswich, related his experience in the use of farmerettes, saying that he had found them extremely capable and valuable. As a matter of fact, it seems certain that young women are to have a most prominent part in gardening and farm operations in the future. The School of Horticulture at Ambler, Pa., is having remarkable success in turning out competent women who seem to find no difficulty in obtaining good positions if they care to do so.

The Women's National Farm and Garden Association is playing a prominent part in advancing this movement. Mrs. George U. Crocker, the acting president of the New England branch, told me recently that the branch now has six young women who will have completed their training at the Massachusetts Agricultural College the first of April, and whom it hopes to place in positions where they will get six months' of agricultural or horticultural experience.

Mrs. Crocker says that last summer she had one of these intelligent young women at her place on the Cape and it made the whole problem of her own work quite different from any previous year because of the girl's efficiency. "One such worker," said Mrs. Crocker to me, "is worth two of the old type who had only the eye for his own day's payment and who brought no individual conscientious effort to the whole scheme of work."

On March 2, at the house of Mrs. F. Lathrop Ames, 306 Commonwealth avenue, Boston, Miss Dorothy Canfield is to give a reading, at 3.30, for the benefit of the association's scholarship fund, and it is hoped that the proceeds will help carry on this excellent work.

Mrs. Crocker believes that florists and gardeners will find it very much to their advantage to obtain the help of some of these young women who are being educated along horticultural lines through the efforts of the organization. A number of florists have tried women workers with success, and it is quite possible that they will come to be much more familiar figures in such establishments in the next few years.

One of my friends reports unusually good results from a dahlia known as Darlene, which is being put out by Mr. J. K. Alexander, and is considered by him the finest pink and white decorative dahlia to date. The decorative dahlia continues to be in high favor, and a number of very fine varieties are on the market this season, but Darlene stands well to the front, regardless of color. Perhaps no dahlia is better adapted for massing. It is not usual to think of dahlias as providing hedge material and yet a hedge of Darlene is really very satisfactory. According to this friend the plants are splendid for specimen planting, too, averaging about three feet in height. A single plant makes a very good showing with the right setting, and is attractive even when not in bloom. When the shell pink blossoms, with the dainty blending of white at the center, finally appear, however, they contrast most delightfully with the heavy dark green leaves. The plant is a long bloomer, and the uniformity of the flowers is quite remarkable. Altogether this seems to be a garden variety of more than usual worth.

Lohr Bros., florists of West Ottawa, Ill., recently purchased the Boyle property in South Ottawa.

The Essex County Agricultural School is asking the legislature for money for a new greenhouse which will cost about $6800. This school is proving very successful in turning out students of ability.

# ADVERTISING AND SELLING

Economical store management is not trying to save on essentials but using every opportunity to prevent unnecessary expenditures all along the line. This can be carried even to the matter of checks which a firm sends out. And it seems to me that Charles L. Baum, of Knoxville, Tenn., has originated a check which is the best of its kind I have ever seen. This, of course, has no reference to the amount for which the check is filled out.

It's a good looking check in the first place, printed on white paper, with "Baum's Home of Flowers" across the top, and "Say It with Flowers" just beneath. It's a check that advertises Baum's and advertises the florists' business.

At the lower left hand corner is a ruled space in which is written the name and address of the concern to whom the check is to be mailed. When slipped inside an open face envelope there is no addressing to be done. At the upper left hand corner is a space for invoices, where appears the amount of the check, the date of the invoice and the object for which it is drawn. In this way the check becomes an unquestionable receipt, giving all the details.

Strictly speaking, this paper is a combination check and voucher, serving the purposes of both, and, in addition, it is a good advertising document. It minimizes the amount of bookkeeping required, and makes an excellent impression upon the man who receives it.

Incidentally, I might say that Mr. Baum shows his public spirit by using an envelope on the back of which appears a rousing boost for Knoxville, "Tennessee's Record-Breaking Third City."

What is advertising anyway? In its essence it is merely telling somebody else that you have what you think he would like to have. The subject is discussed somewhat at length by Paul Findlay, of the Retail Public Ledger, of Philadelphia, and what he says, I think, is very much to the point.

"Ask the average dealer why he does not advertise and he will say—leaving out the pure fool answers about how 'his trade knows where he is' and the like—that he 'has nothing special to advertise' or that he 'doesn't know how to put things into print.' Yet a grocer, say, of even mediocre intelligence who meets a customer inside his store or elsewhere has no difficulty in saying: 'Say, do you know that my store is headquarters for good cheese—the "kind with the snappy flavor?"' "

That is all that advertising is—just saying in print what you would say simply and naturally to anybody you chanced to meet.

"You don't dance a jig or 'cut up' a frolic when you tell people about anything in your store. But some people have a notion that they must shout, yell and behave 'puff'ly scan'alous' when they go into print. That is all wrong. Advertising is simply saying, in quiet, plain, sincere good English, what you have to offer. And it is not a bit necessary that you have anything the other stores have not, despite the almost irremovable obsession to the contrary entertained by most retail store owners."

## HAS OUR PUBLICITY CAMPAIGN HELPED TO SELL MORE FLOWERS?

This was a query we would get very early in the stages of our advertising. Then came the period when our campaign sunk in a bit and was followed by retailers doing more advertising on their own initiative and by encouragement from our National Campaign. Then came the co-operative advertising in many of the cities which has kept increasing in some centres, due to the efficient manner in which they are receiving local subscriptions, and where all are paying in like proportions, which, of course, is the healthful way.

We also note a tendency in localities where the plan is not equitable to fall off in the co-operative advertising as well as in retail florists' personal advertising, due to the enthusiasm being on the wane caused by the relaxation of the co-operative advertising, which, of course, is the natural trend of action, one depending on the other.

Have you noticed in the districts where advertising is being carried on the increased demand made for more flowers, also the contrary condition where advertising is not carried on? Success will come only by continued and persistent advertising.

Now, a new query comes to me every now and then, which is a healthy sign and should ordinarily be a regular thing, namely—What has become of national advertising in the magazines? How many have missed it lately and why has it not appeared the past few months?

Well, the answer is simple. Your Publicity Committee cannot function unless they have the money to carry on, and they prefer to wait until the funds are available and in the treasurer's exchequer before they can contract for magazine advertising. We

**As Sure As You Are A Foot High**

many items will be out of the market just when you want them. So why not get our Bulletin right now—a postal card with business address will bring it—and you must be interested in the following:

APPLES, a general list—good kinds too.
PEARS, big quantity Bartlett. Also other varieties, 3 yr. old. Fine for retail trade.
DWARF PEARS too, at right prices.
PEACHES, take no back seat in growing this item. Lots of Elberta, Carman and J. H. Hale.
ORNAMENTAL TREES, Norway, Silver and Ash Leaf Maples, from 6 ft. up to 15 ft. high.
EVERGREENS, about cleaned out, except Arbor Vitae, a good quantity from 12 in. up to 6 ft.
BERBERRY THUNBERGII, you know we are the largest growers in the world. 2-3 ft., 18/24 in. and 12/18 in. grades. Also Seedlings.
CHERRIES, not long on—mostly sour varieties.
CALIFORNIA PRIVET, some nurserymen say it is out of the market—come to us—can offer you 2-3 ft. 18/24 in. and 12/18 in. strong 2 yr. grade.
AMPELOPSIS VEITCHII, strong 2 yr. grade. Also Seedlings at very low prices.
FRENCH APPLE and ROSE STOCK, quoted here at Manchester. Most of them trimmed ready to plant.
ORNAMENTAL SHRUBS, you should see our list before you buy.
ROSES, Climbing and H. P., a long list of scarce kinds.

Please let us hear from you if you want SERVICE and GOOD STOCK this Spring. WE CAN SERVE YOU RIGHT.

**C. R. BURR & CO.**
**Manchester -- -- Connecticut**

will soon feel the need of its continuance, and when we do will have to use twice the effort to get back where we were a year ago.

Phillips Brooks once said:—"Be courageous. Be independent. Only remember where the true courage and independence come from." How well this reminds us of our national campaign. Let's see:—Be courageous—we were, particularly when we entered into a campaign when the majority felt it was not the proper time. Be independent: we took a decided stand, and went ahead. Only remember where the true courage and independence came from.

In the midst of co-operative and other forms of publicity don't forget your national campaign which gave the support and lent enthusiasm for still greater advertising among florists than ever before. Support your fund and keep the ball rolling so that all will benefit as well as yourself.

We must be ready to prove the worth of our campaign by sending in our own contribution.

HENRY PENN.
Chairman, National Publicity Campaign.

### HILL'S AMERICAN ROSE

The following request has been received from The E. G. Hill Company, Richmond, Indiana, for registration of a rose, and this has been approved by the Rose Registration Committee. Unless objections are received within three weeks from the date of this publication, the registration will become permanent.

Name—Hill's America.

Class—H. T.

Parentage of Rose—Rose Premier x Hoosier Beauty.

Description:

Habit of Plant—Strong, large grower, thornless.

Character of foliage—Dark in color, large.

Freedom of growth—very free.

Flower—Immense.

Color—Rose Pink.

Form—Pointed bud—finely finished, long.

Fragrance—June fragrance.

Petalage—

Freedom of bloom and lasting quality—extra good.

The rose is somewhat similar to Columbia but is different in bud, much longer and superior for the following reasons: On account of form of bud and color, which is intermediate between Columbia and Rose Premier.

Offered by The E. G. Hill Co.
February 5, 1921.

Discount on Contracts for consecutive insertions, as follows:

One month (2 times), 5 per cent; three months (6 times), 10 per cent; six months (12 times), 20 per cent; one year (24 times), 30 per cent.

Page and half page space, not consecutive, rates on application.

SUBSCRIPTION RATES:

One Year, in advance, $1.00; To Foreign Countries, $2.00; To Canada, $1.50.

**Seventy-Four To One**

The statement is made with authority that of three hundred grocers investigated only four made more than $2,000 profit during the past year. We wonder how this would compare with the retail florists. It is safe to say that fewer florists are obliged to file an income tax return than is commonly believed. Here and there certain florists stand out conspicuously because of the success which they have made in their business, but how about the rank and file? Take any list at random and it is easy to pick out a large percentage who would refuse to admit making any but a very moderate income.

Now what are the reasons for the failure of the majority to get larger returns? Of course these reasons may be multifold. Possibly the location is not a good one. Perhaps there is a handicap in the matter of capital. Nevertheless, the chances are that either the accounting system used is not sufficiently accurate to show the florists their precise profits, or else there is something wrong with their business methods. In the former case it is important that the system be changed, for otherwise there is real danger that the florists may be hauled up by the government for making false and inadequate tax returns. Every man in business is expected to keep track of his receipts and expenditures, and no excuses are accepted by Uncle Sam.

If the difficulty lies in the second direction, it is important that the errors be corrected as quickly as possible. In many cases it will pay to have an expert accountant come into the office, for all too often the trouble lies in faulty bookkeeping, or in the failure of florist to keep adequate accounts of all the money which passes through his hands. One other leak comes in bad debts, and it is very much to the welfare of the florist if he gets his business onto a cash basis to as large an extent as possible.

**England vs. America**

It is interesting to read in the Horticultural Trade Journal of London, Eng., an article by Mr. M. C. Allwood, in which he says that America is falling far behind in the production of carnations, not so much in the quantity as in the quality of their novelties. We wonder if Mr. Allwood could have made this claim in all faith if he had been present at the recent convention in Washington, or, for that matter, at the last meeting of the Gardeners' and Florists' Club in Boston, when carnations were shown in great abundance. We have an idea that the Englishman is somewhat biased, and would question his statement that England is today the Mecca of the carnation world, or that all who want the best carnations go to that country for them.

And how about this statement, "American market growers are giving up carnation cultivation through lack of lasting qualities in the flowers, either through improper methods of cultivation or the failure to raise varieties whose flowers will last?" We imagine that this will be news to the carnation men of America.

Mr. Allwood criticizes the never ending stream of white and pale pink flowers, which he says limits the market in price with cut carnations, as the public gets tired of too much repetition, and requires a new color. He says: "All too many market salesmen and growers shudder at the thought of any variety supplanting White Perfection, Beacon and Enchantress as for a new claret, apricot or fancy carnation."

If the growers in England are sticking to these varieties, we wonder where the great advance about which Mr. Allwood talks come in. There are plenty of carnations grown in America far ahead of Beacon. No doubt, however, Mr. Allwood is right when he makes one prediction, saying that in the future growers will develop scent, lasting qualities and the general constitution of the plants as well as increasing winter productiveness.

Is his statement true that the principal carnation buying countries are Africa, Australia, New Zealand and Holland, with Japan becoming interested?

**As to Coal**

Like Banquo's ghost, the coal situation will not down. Just now florists are faced with a problem which spells money saved or money lost, depending upon the way in which they settle it. Ordinarily the coal men preach early buying, with gloomy predictions as to what the future will bring forth; but as a rule prices have been lower in the past in June than in March. The same view of the situation is being presented this year, but from all the evidence which can be unearthed, the statement that coal has reached its low point sees likely to be founded on fact.

Conditions are still abnormal. At present a large amount of coal has been accumulated at the mines. The coal business is less than usual at this season because of the fact that industries everywhere have closed down or have gone on short time. What will happen in the near future depends largely upon the way business acts. If, as is confidently expected, manufacturing starts up again in a few weeks, there will be an immediate demand for coal, because the first thing the manufacturer tries to do is fill his coal bins. If that happens, prices will immediately go up.

If business remains stagnant for a long time, probably it will be possible to buy coal almost as cheaply in mid-summer as it is now. But all optimists in the business world look to an upward movement in business affairs very shortly, in which case a florist who buys his coal now will be doing himself a good turn; and at the best coal is not likely to go much lower.

## NEW ENGLAND GROWERS MEET

### Discuss Many Important Matters at a Banquet in Boston

There was an enthusiastic meeting of the New England Growers' Association at the City Club in Boston, last Saturday night. A banquet was held at 6.30, and at its close several hours were given to a discussion of matters of great importance to the members. Before the association went into executive session, however, a brief but valuable talk was given by Mr. J. F. De Chant, who gave many points on salesmanship.

SECRETARY GEORGE MOISE

He explained that while the growers occupied a little different position from retail florists or the wholesalers, they still were salesmen, because they had to find buyers for their goods; and as a matter of fact, every man who did honest work was a salesman, selling goods, ideas or labor. He pointed out that all salesmanship was based on laws, with the fundamental law of honesty at the base. Every man on the road, he said, who padded his expense account was violating this fundamental law, and so weakening his ability.

Mr. De Chant emphasized the value of personality, saying that a man with a grouch was in no condition to meet customers, because the first thing a salesman must do is to create a favorable impression.

It was stated that any line of business was improved when everybody connected with it worked together in co-operation instead of in sharp competition, because in this way more business was created for everybody. That was why a general advertising campaign in which everybody in the trade had a hand proved of value to producers and retailers alike.

Prof. De Chant was given a warm vote of thanks, and incidentally a huge bunch of carnations.

Taking up the real business of the evening, Pres. S. J. Goddard called upon Secretary Moise for a report of the convention at Washington. Mr. Moise went into details, telling of the various matters discussed, and dwelling upon the high character of the national officers. Mr. Moise also made a report on the possibilities of co-operative buying, a matter in which the members of the association were much interested, and which promises to be of great financial value to them.

The question of coal was brought up, and statements of the members showed that prices charged them had varied greatly, but that $16.00 a ton was the most paid by any grower last winter. It was the general opinion that coal could be bought at as reasonable a price now as was likely to be the case this season.

Mr. Allan Peirce stated that it had paid him well to stick by one dealer who had bought his coal for him on a commission basis, and given him all he needed. Mr. Peirce gave an interesting report of what he found on a trip to the mines last year, when many small miners were digging coal out of the mountainsides and carrying it to the cars on wagons, making no attempt to clean or sort it.

## CONNECTICUT NURSERYMEN

At the 14th annual meeting of the Connecticut Nurserymen's Association, Kenneth Gillett of Southwick, Mass., spoke on "Native Plants and Their Uses." John Barnes, of Yalesville, Conn., spoke on the "Duty of the Nurseryman to His Customers." State Forester Walter O. Filley of New Haven gave some interesting information in a talk entitled "Thoughts of Interest to Nurserymen," and Dr. G. B. Clinton of New Haven enlightened the nurserymen on "Fungi."

The following officers were elected: President, Henry W. Gottschalk, Manchester; vice-president, William W. McCartney, New Haven; secretary, Frank J. Rippin, Manchester; treasurer, William W. Hunt, Hartford.

President Gottschalk appointed the following committees:

Executive—The officers, C. R. Burr, Manchester; F. S. Baker, Cheshire; W. E. Campbell, New Haven.

Legislative—C. F. Brainard, Thompsonville; John Barnes, Yalesville; C. R. Burr, Manchester.

Entertainment—P. M. Hubbard, Bristol; W. E. Campbell, New Haven; C. F. Brainard, Thompsonville.

Publicity and Membership—F. L. Thomas, Yalesville; W. E. Campbell, New Haven; F. S. Baker, Cheshire.

Ladies' Committee—Mrs. C. R. Burr, Manchester; Mrs. H. W. Gottschalk, Manchester; Mrs. F. J. Rippin, Manchester; Mrs. P. M. Hubbard, Bristol; Mrs. W. E. Campbell, New Haven; Mrs. F. S. Baker, Cheshire; Mrs. C. F. Brainard, Thompsonville; Mrs. John W. Barnes, Yalesville; Mrs. W. W. McCartney, New Haven.

Mr. Campbell was responsible for the presence of the ladies. He made an eloquent plea at the summer meeting in their behalf. Wanted us all to bring our wives and sweethearts—give them a good time, he said. So "Old man" Burr, over in Manchester, closed up his office and sent all the girls in for good measure. And Campbell—left his wife home, 50 miles away, playing bridge.

George H. Harris, late of Greenbrier, Tenn., now with C. R. Burr & Co., of Manchester, attended the meeting.

F. J. RIPPIN, Sec.

# CARNATION NIGHT

## Many New Varieties Shown to the Gardeners and Florists of Boston

Carnation night is always an evening of importance with the Gardeners' and Florists' Club of Boston, and the one held at Horticultural Hall, Tuesday, February 15, was no exception. The attendance was large, and the exhibits remarkably comprehensive, including most of the newer varieties now under trial.

Sam Goddard showed several Dorner seedlings, including Happy Day and the Lark. He said that the latter was very free blooming, although not very large. Mr. Goddard also had a display of Laddie which was extremely fine. Mr. Edward Winkler had some new seedlings and Mr. M. A. Patten showed Thomas Joy, an intensely white carnation which seems very promising. Mr. W. D. Howard also had a large collection of different varieties. Mr. James Methven showed some white carnations grown from plants which were cut back last June and left in the benches. He said that he had found that these carnations came along very well if cut high, but did not bloom nearly so freely when cut low. He said that they were almost as early as flowers from new stock.

Paul F. Brigham showed the new pink carnation, Barbara, of which he now has a thousand plants, and considers a promising commercial variety.

Mr. Doherty showed a collection of sweet peas, "Rose Queen," which looked very good, and Mr. W. N. Craig showed tulips and daffodils. He said that the daffodil "Silver Spur" forced just as easily as "Golden Spur," and was larger, and that "Flamingo" had proved an excellent tulip for early forcing.

Several prominent carnation men were on hand and spoke briefly. President W. D. Howard, of the American Carnation Society, described his methods of sterilizing the soil by using inverted pans with steam pipes underneath. He said that he believed new soil was preferable to sterilized soil, but if the same soil had to be used over again, it was improved greatly by sterilization. This fact, he said, had been demonstrated by carefully conducted check plots. He emphasized the necessity of using plenty of manure with old soil, saying it was foolish to depend upon the feeding which the soil had received during the growing season.

Mr. S. J. Goddard reported on the Washington convention, saying that it had a better display of new varieties than for several years. He said that in his opinion the carnation had been greatly improved in the last few years, as was shown by comparison with some very well grown blooms of Lawson shown in Washington. He said the carnations of today had better stems, better color and flowered more freely than those of a few years ago. In reply to a criticism which had been raised in some quarters that the flowers at Washington were not arranged well, Mr. Goddard said that it was purely a commercial exhibit, and best to have all the flowers arranged alike so that they could be compared readily by the growers.

Mr. William Sim told of the carnations grown at his place in Cliftondale. He called White Delight the best white and said that, while Matchless was good in the spring, White Delight beat it out all winter. White Benora he called handsome in the fall, but not in the middle of the winter, and said that it required a lot of pinching. It's a pretty variety, but costs too much to produce. Laddie he considered the best pink. In fact, he praised it very highly, saying it had practically no fault. He said that Pink Delight was a standard and nothing had been found to take its place yet. It was not equal to Laddie. He said he had grown Ruth Baur, but would not grow it again.

Mr. Sim aroused considerable interest by saying that in his opinion Morning Glow was the most profitable carnation ever introduced, flowering continuously and having few faults. He had found Aviator the freest blooming red. It has weak stems in the middle of the winter, he said, but that fact doesn't seem to affect its sale. Herald he had found a strong grower and a steady bloomer, although the color was not just right.

The secretary was instructed to send a letter of sympathy to Mr. Gustave Thommen, correspondent of the Florists' Exchange, and a well known member, who was seriously ill.

The number of new members admitted was unusually large. The names were as follows:

B. I. Letson, 90 Bloomfield St., Dorchester.

Kenneth R. Craig, Faulkner Farm, Brookline.

Herbert H. Fletcher, 785 Centre St., Newton.

Walter P. Bashaw, 132 Low St., Newburyport.

Frank McAuley, 564 Heath St., Chestnut Hill.

Miss Christine A. Norton, Medfield.

J. C. Harris, 43 Beale St., Brookline.

James C. Gibson, Heath St., Brookline.

## George Watson's Corner

"You in your small corner and me in mine."

Supply and demand governs prices—everybody understands that. But if one wholesaler happens to get a little more for the same quality than another wholesaler—through fortuitous circumstances, or superior generalship—don't the grower howl! You can bet your boots he will, if he isn't shipping to the right house. He thinks he's being stung and next season another outlet will handle his. That's the way he talks to himself. So they keep changing around until they have tried them all. And then what? Ask anybody. The answer is: handle your own stuff and get all that's coming to you. Sure thing. Well, a lot of them have tried that and although they won't admit it (some of them)—they are sadder and wiser men today. The sum and substance of the whole thing is that wholesaling is a business in itself and takes a lifetime's experience, great breadth of view, a deep knowledge of human nature, quick and decisive judgment to suit circumstances and all the finest attributes of men who know how. You can't get these attributes from an amateur.

The wonderful fertilizer that will kill weeds on the lawn and yet not damage the grass any is having its innings in the daily press these days. The same thing has been going on ever since I can remember, which is now close on half a century. Every generation apparently produces a new crop of foolish people who learn nothing from the experience of their progenitors. Weeds are stronger than grass, else they wouldn't be weeds. Can't they get that simple fact through their heads? Apparently not. Weeds are stronger than grass. A weed is so mighty strong it will come up in spite of you. Whereas grass has to be cultivated. As all experienced gardeners will tell you, the thing to do if you want to have a good lawn is to get rid of your weeds first. And that can be done in one way only and that is by fallowing. In other words, after your ground is all prepared in the spring, don't sow your grass seed. Wait for the weeds to come up. Then harrow them up crop after crop until early fall. Then you can sow your grass seed and you'll have no weeds.

Yes! We all take our hats off to Boston. Five presidents—fine. Philadelphia, especially, takes the Quaker

hat off to the Pilgrim bonnet, and makes due and cordial observance. Boston and Philadelphia were the pioneers in early colonial days in horticultural development in this country, and they still hold their own in a modest, quiet way. Boston seems to have about everything in clubdom but the seedmen now and she may get them next, as there are some pretty live ones in that line around old Faneuil Hall—although we refrain from mentioning any names at this juncture.

---

The trade will be sorry to hear that Howard Earl has been very ill for the last two weeks. Edward C. Duncan, general manager of the William Henry Maule Co., has also been under the weather for some time.

---

I had a queer dream the other night. It seems I was at a florists' banquet at Lancaster one evening. Many strange and wonderful things happened in that dream. It was very interesting and there were all kinds of characters in it. But like most dreams the details faded quickly in waking moments. One incident, however, remained very distinctly and that was when the chairman announced: The next number on the program, ladies and gentlemen, is a very important one. I have the honor to announce one of the gems of the evening by a past master. It gives me great pleasure to introduce to you Mr. Elmer J. Weaver of Ronks who will recite his celebrated masterpiece, "A Message to a Violet," accompanied by a policeman. (Loud applause.) I beg that you will all restrain yourselves, and listen to this rendition with decorum, else I am afraid I will not be able to answer for the consequences. (Boom!) And then I woke up. Dash it!

---

## NEW CARNATIONS

None of the present day breeders can enhance their carnations or roses in the matter of freedom along the lines followed by them now. There is no reason why Mr. E. G. Hill and others should not have roses that will be more free continuous, etc., as well as "Columbia" quality plus! Or, why do the breeders not give us Druskhi quality and 100 per cent hardiness, etc., plus?

Re—carnations as being bred today there can be no advance in freedom, etc., simply because they are not being bred for it, nor are our carnations in most cases as healthy as they should be. All these things obtain because of methods. No one can go beyond one's vision,—true in religion, politics, evolution, business, etc.; we worship small men, small ideas—because we look at these men, etc., as big men, etc., and cannot see their true size as subjects for the microscope! Oh! Indeed! There be exceptions? We have had a very diverse experience in breeding so have observed some things that count despite the present scientific conclusions. If one reads—Babcock and Clausens (McGrow Hill Co., N. Y., $4.00) is the very best book on breeding in its broadest aspects. Today every breeder should get it—a gold mine! But DeVries Mutabiano Theorie and Darwin's plant breeding also are gems—needful and helpful!

Now to carnations:

I have developed a hardy type equal in quality of size of Matchless at the same dates but vastly more free, better colors in the open or under glass in hot bright June and July.

I expect to have a big block of seedlings this year and a larger one next year. These, I think, in Tennessee, will give a big crop after the peonies are over, then in September and October before freezing, and later on a continual type.

I have given a big study to Malmaisons and a close study to all carnations as to their whims and caprices.

E. BETSCHER.

---

## ERLANGEA TOMENTOSA

The month of February is a season that does not furnish us with too many flowering plants, and anything that will help out at this time of the year is always acceptable. "Erlangea Tomentosa" is a plant that always can be relied on at this season. Its mauve or lilac colored flowers have, I find, an attraction for many people; also, its herby fragrance is quite pleasing. The flower panicles have the shape of a Eupatorium, and the general habit is somewhat similar.

The genus comes mostly from tropical Africa and there are said to be about thirty species. E. tomentosa is the only variety I have ever seen in cultivation, but has been around Boston, for about a dozen years. The cultivation of the plant is quite easy, it being easily rooted from cuttings in the spring.

One would naturally think that, coming from tropical Africa, a high temperature would be necessary to succeed with the plant. This, however, is not the case, as it grows and flowers beautifully around 50 deg. night temperature, and can be kept in good condition if required for late flowering at a much lower temperature. may be grown in pots, in bush form, similar to a chrysanthemum, pinching them up to the same date. A friend of mine has grown a nice batch for cut flowers this season on a bench.

Used as a cut flower some complaints have been made that they do not take the water well; however, if one places them in water, as warm as the hand can easily be held in, there will be no trouble on this score. We cut the night before using, and let the water cool of itself, in the cold closet.

Loam used for growing chrysanthemums is what the plants like to grow in; water and pinch the plants during the summer. That is all that is necessary, potting them as they require it; nice plants may be had in eight inch pots, in one season.

The plants may be watered with manure water, or any good fertilizer when they are well rooted, in their flowering pots. The only insects I have seen on Erlanger is green fly, which may be kept in check, by fumigating with any of the market tobacco fumigants. I find that they are one of the plants that are very sensitive to hydrocyanic gas.

## THE INTERNATIONAL FLOWER SHOW

With the various promises of support in the way of interesting exhibits taking material form, all doubt is removed as to the success of the Eighth International Flower Show, as far as the larger exhibits are concerned. In addition to the big exhibits already reported, our committee is pleased to announce an exhibit by Mr. W. R. Coe of Oyster Bay, L. I., of what will most assuredly be regarded as the most comprehensive collection of camelias ever staged in this country, or perhaps in any other. Plants in tubs, in profusion of bloom, will be exhibited, and it is expected the number of varieties will be large, as the collection now possessed by Mr. Coe includes fifty-seven varieties. The collection of cut camelia blooms staged by Mr. Coe at the last show was most interesting and attracted a large amount of attention. It was especially pleasing to the older among the public, inasmuch as they saw the blooms which, years ago, took the place of the orchids and gardenias of today, and the procuration of which was always a matter of concern to the florists of those days.

Another exhibit expected to attract considerable attention will be one composed of cut material from the greenhouse of Mr. Joseph Widener of Elkins, Philadelphia.

The plan of the show, as laid out months ago, is now practically complete. Competition in the largest group class is likely to be very keen, entries already received assuring this. All the other group classes are well filled, and this year there is an increase in the entries for the class covering the 500 feet group of flowering plants arranged for effect, orchids excluded, but suitable accessories allowed. It was difficult in previous years to secure two entries, but this year there are three. The prizes in this class amount to $1,000.

It has been necessary this season to allot much more space than customarily for the competitive exhibits, and the committee is greatly elated over this condition. It seems more than likely that the final show in the Grand Central Palace will be the largest and best ever staged on its floors.

The committee is most earnest in the request made for small exhibits. Very many florists, and private growers as well, could stage a vase or two of some flower or other. Subjects such as antirrhinum, wallflowers, iris, myosotis, or stocks, for instance, are

CHOICE BEAUTIES, ORCHIDS, VALLEY, ROSES and all Seasonable Varieties of Cut Flowers

interesting to everybody and the more they are seen, the better for the florists' business.

The Official Catalogue of the Show is well under way—it really should be called a handbook, for it is full of valuable information on horticultural matters, and is preserved as a book of reference.

Available space in the trade section is growing less almost daily. Exhibitors in this section evidently appreciate fully the advantages presented by a class exhibition of this kind, which brings prospective customer and nurseryman or merchant into personal contact, resulting to the good of each.

Additional exhibitors not previously reported are:—

Burlington Willow Ware Shop, Burlington, Ia.

Flowerfield Co., Bemus Point, N. Y

W. H. Lutton Co. New York.

Associated Motors Co., New York

S. A. Dawson, New York.

The window poster cards, and the large billboard three-sheets are ready, and many of the former are already displayed in florists' windows. The management will be grateful for the courtesy of proffered assistance in window display of the poster, and will forward cards to all who can find a place for them in their establishments.

### HORTICULTURAL BOOKS

EVERY GLADIOLUS GROWER, SEEDSMAN, NURSERYMAN or FLORIST who has but limited space at hand for growing purposes and wishes to realize the HIGHEST POSSIBLE YIELD in FLOWERS, BULBS and DOLLARS per SQUARE FOOT should have a copy of my new book, "THE GLADIOLUS FOR PROFIT." Every detail connected with the outdoor growing of these bulbs for the GREATEST PROFIT is given. Illustrated with twelve halftones from actual photographs showing my intensive system of culture that BRINGS THE PROFIT. A special chapter on DAHLIAS showing the PROFIT WAY to grow these for cut flowers and bulbs and, most important of all, WHAT VARIETIES to grow in the MIDDLE WEST in order to get a crop and the money EVERY YEAR. The merits of ONE HUNDRED and THIRTY varieties of Gladioli are cussed and discussed and the MONEY MAKERS POINTED OUT. There is good money growing the Gladiolus if you START RIGHT, and this book will START YOU RIGHT. Satisfaction or your money back. Mailed postpaid anywhere upon receipt of $1.00. R. M. Champe, Oakland Gardens Nursery, Walled Lake, Mich. Address all letters until April 15, next, to me at my southern plant farm, Box 412, St. Petersburg, Fla.

### PETUNIAS

PETUNIAS.

Diener's Ruffled Monsters, single. The largest and most beautiful ruffled variety of Petunias in existence. Ruffled Monster seed in separate colors, pink, red, variegated, white, red with black center, pale lilac, and all colors mixed.

The following somewhat smaller than the Ruffled Monsters: Pearl of Kentfield, flesh pink frilled, dwarf, purple or blue and white frilled.

Price per package, 50c

Catalogue will be sent free on request. Write for it today.

Mr. W. L. Ferguson, Smiths Falls, Ontario, under date of Dec. 2, 1919, writes me the following in regard to our Petunias:

"Last year I purchased Petunia seed from you. I think every seed germinated and the blooms were the finest ever seen in this part of Canada. Only about 8 per cent of the plants could be classed as common. I want more of the same quality each year."

Mr. Rudolph Nagel, Lancaster, Pa., under date of Dec. 14, 1919, writes us:

"I had, last year, just a few of your Petunias, but I am sure I could have sold thousands of them. They surely came up to your claim and way ahead of my expectation."

RICHARD DIENER CO., INC.
Kentfield, Cal.

### GLADIOLI.

Jack London, Anna Eberius, Thomas T. Kent and Mrs. H. E. Bothin: the four greatest and most perfect Gladioli in existence. They have won the greatest admiration wherever shown and will be grown by the million. Our new catalogue, showing some of our varieties in natural colors and describing many of our other new creations, is free on request. Write for it today.

RICHARD DIENER CO., INC.
Kentfield, Cal.

# It will pay you to read the letters below from well-known authorities

MR. GLADIOLUS GROWER:

No doubt you know the Kunderd Gladiolus and that never before have I had a surplus to offer to the trade. These new Gladioli have grown so rapidly in popular favor that even now, these "dull times," I can only spare stock of a limited number of kinds to a few growers. Last year I sold over $53,000.00 worth of bulbs and this year the sales will probably nearly reach this amount if not more, and if not for the "dull times," would have reached $80,000.00 to $100,000.00. All this business has been built up in 10 years and before Gladioli became as popular as now. The Gladiolus is fast becoming by far the most popular of all summer flowering bulbs (or plants), and rightly so, both as a garden ornament and as a cut flower. Too many growers are still growing the more common kinds and not keeping up with the finer new things, and are thus losing the best returns.

**Mr. John Zeestraten, East Bridgewater, Mass., in a letter dated January 4, 1921, wrote me as follows:**

Dear Sir:

Yours of December 31 received and I thank you for letting me have the 25 Marie Kunderd for $100.00. I am buying this to work up a stock from, and don't care what a bulb costs as long as it is good. I sincerely think your Gladiolus the finest in the world without any exception. And not only that, but good money makers for the grower. I grow many varieties originated by you including all your Glorys and have made money on all of them. I have Norton and Mary Fennell which are hard to beat. Purple Glory is a "beaut."

**On receipt of above, I wrote Mr. Zeestraten that I would like to use his letter for this advertisement to show other growers what can be done. He replied as follows:**

Dear Sir: East Bridgewater, Mass., Jan. 10, 1921.

Yours to hand and you can use anything out of my letter you may see fit. Yes, Mr. Kundred, I think your Gladiolus wonderful and as a grower know them to be fine money makers. I have sold over 10,000 young bulbs of Norton alone this year, besides its bulblets at $50.00 per quart.

Next year after I have paid for my farm, I am going to get only new varieties from you, and be one of the first to have something new for sale. You are right in buying only the best because a plant or bulb is never expensive when it is good. We always did this way in Holland and found it very profitable, and I am doing the same now. Four years ago I started here without a cent and only a few bulbs and now I own a little place in Mansfield and have a fine 50-acre farm here with good buildings, and almost all paid. I made enough on "Norton," "Orange Glory" and "Mary Fennell" to pay over one-half of this place. So you see what Kunderd's varieties have done for me. I am sure I will make good in a few years on the "Marie Kunderd." I must not forget "Lilywhite." Last spring I bought bulblets of it from Mr. Meader for $150.00. This fall I sold a fine lot of young bulbs from it, but have a nice lot of young stock left for myself.

Respectfully yours,
(Signed) John Zeestraten.

**Many of our best growers have built up in this city. Some growers make the mistake not to buy new kinds of bulbs or plants when scarce, because while yet scarce the prices are high. The large quantity which can be grown from a new variety in a few years makes the first cost comparatively insignificant. The increase in stock is always far more rapid than the decrease in price for years, and if you wait till the price is cheap, you find you have something which is too cheap by then to grow profitably. A peony plant will double in quantity each year, an iris will increase four times a year and a not very rapidly increasing gladiolus would, under favorable conditions, multiply by ten each year. Now take a pencil and a piece of paper and see what this means for a period of five or ten years.**

**A prominent firm of bulb growers in Florida wrote me December 29 last:**

"Your wonderful introductions need no praise from us—they are in a class by themselves. We have tried many varieties of other growers, and have gone as far West as California, thinking perhaps that bulbs from there would do well in our climate, but most of these have found their way into our Mixture."

**Another grower from Ann Arbor, Mich., January 4, (this year) in a letter, writes:**

"You certainly have marvellous varieties and I should like to see you take down the bars and flood the whole world with their beauty, making them accessible to the poorest, who really need them most, as well as to the more wealthy. Personally, I should like nothing better than to run the most of my business into your varieties."

More than a dozen testimonials like the above come in my mail weekly. Now Mr. Grower, would it not be good business for you to grow gladioli that bring such praise and such demand. There is always a surplus of common kinds, but never enough to meet the demand for good varieties. If you are a grower, you need this stock and if you are a beginner, you cannot afford to start without it. Take advantage of this opportunity, as I do not expect to offer a surplus to the trade next season. Write me a list of what you can use and I will make you an attractive inducement on wholesale lots.

## NATIONAL FLOWER SHOW

At a meeting of the National Flower Show Committee in Washington many important matters were considered.

The poster design or sketch secured for the projected St. Louis Show was exhibited and, on motion of Mr. Duckham, adopted for use in Cleveland. Estimates for poster stamps, or stickers, were presented and there was some discussion, but the matter was eventually referred to the committee on advertising, to be appointed.

The matter of appointing a committee to judge any novelty that may be originated, with the idea of recommending an award to be made by the National Flower Show Committee, under its powers, was discussed at length, and, on motion of Mr. Roland, it was resolved that any member of the S. A. F. and O. H., wishing the committee to pass upon a novelty of his own introduction, could present it for such purpose before a special committee by arrangement with the National Flower Show Committee.

Secretary Young presented for inspection the S. A. F. medals in silver and bronze. As it was found there was no wording on the medals to connect the National Flower Show with the Society, the secretary was requested to ascertain from the engravers whether it would be possible to have this addition made to the die, and report on the matter at the March meeting of the committee.

The question of uniform background and decoration of exhibits at the show was discussed at length. At many shows deficiency in this respect marred the general effect, and a flower show should not be open to criticism in this respect. On motion of Mr. Hill, seconded by Mr. Knoble, the chairman was instructed to appoint a committee to present at the March meeting data concerning decorative materials and prices of same, with a plan, if possible. The appointed are Mr. Young, Mr. Knoble and himself as such committee.

Mr. Roland pointed out the necessity for a budget committee to consider finances and expenses covering the Cleveland Show, and moved, seconded by Mr. Knoble, that the chair appoint such a committee, to report at the March meeting. The chair announced the following as the committee: Messrs. Traendly, Young, Duckham, Knoble and Roland.

The committee adjourned to meet in New York during the week of the International Flower Show.

JOHN YOUNG,
Secretary.

# -HORTICULTURE-

Entered as second-class matter December 8, 1904, at the Post Office at Boston, Mass., under the Act of Congress of March 3, 1897.

Vol. XXXIII MARCH 10, 1921 No. 5

# THE TALK OF THE TRADE

H. M. Totman, of Randolph, Vt., is another one of the New England florists who are finding good business. It seems to me that as I go around to the smaller towns these florists located with a medium range of glass, who are up-to-date enough to keep it in good condition, progressive enough to keep up with the times, and go after the business, are getting their full share of the goods in the florists' business. Mr. Totman reports good trade through the entire season, and is now planning an addition to his range, of approximately 12,000, and it is good news to learn that he plans to devote this amount of space to raise geranium stock, all the way from cuttings through 2¼ inch and larger sizes. There is no doubt that there is a decided scarcity of geranium stock in New England, and I believe florists who will go at it in a businesslike way will find good results.

The question of Easter lilies for this season still remains a case of getting a lot of stock in on time. There still are several blocks that are so far behind that there is a question whether they will reach the mark. I believe that lilies will bring a good price for this season. Twenty to twenty-five cents per bud seems to be about the point that they will hang around, and I can't possibly see where there's going to be any surplus. This applies to the different sections of the east that I have visited, all the way from Philadelphia to New England.

And another point, as I have said before, that contributes to a moderate supply, is the fact that such a lot of small bulbs were planted. This was made necessary on account of its being impossible to get a high percentage of large sizes. A thousand pots of lilies this season will run much lower than the count on a thousand pots of the previous season. And of course when it is necessary to push Giganteum pretty hard to get them in on time, the consequence is always a small count on buds. A moderate temperature will result in a good average count, but as soon as it is necessary to push pretty hard with heat, it isn't possible to avoid losing a certain portion of the buds.

Hydrangeas and Ramblers, both tall and dwarf, are in fine supply and excellent quality. I am looking for a good Easter for both sides, the wholesaler and the retailer, and I am full of confidence that it will result that way.

Excellent Arrangement of Roses

Sales of gladiolus bulbs for this season are reported very heavy from all sources. The florists who raise stock for their own work have learned the possibilities of gladioli as a cut flower, both for vase work and funeral purposes. Plantings at intervals, with a result of early flowers in particular, to follow along without any let-up way into the fall, prove profitable crops for anyone with a retail trade. There are but a comparatively small number of the long list of gladioli offered that are valuable for this particular class of trade, but to mention just a few of them, such varieties as America, Halley, Independence, Mrs. Francis King, Mrs. Frank Pendleton, Mrs. Watt, Niagara, Panama, Peace. Schwaben and the Primulinus hybrids are all sorts that will give good returns. The form and finish of the flower spikes is what is necessary for retail purposes, and they are sorts that give a good average of bloom. Inch and a quarter bulbs, if they are truly graded, will give good results.

---

The florists' slogan, "Say It with Flowers," can without question be said to be the most valuable and most widely known trade slogan that has ever come before the eyes of the public, and anyone who reads the daily press or the periodicals cannot fail to notice how many times it is used, either with its exact wording or as a joke. A recent editorial in the Boston Herald when it was advocating the giving of our dollars for the help of the starving children in Europe, worked in this slogan by saying "Tell it with dollars," and another one which came to my notice was on a recent Shriners' notice under the heading of "Officers and Committees of the Divan." It was headed "Smell It with Flowers," and the committee was Henry Penn, R. C. Bridgham, John Newman and Julius Zinn.

---

Mr. James Wheeler, the well known florist of Natick, Mass., was right in predicting a big time for the first three days of March, when the Commercial Club of his town had an exhibition in the armory. Mr. Wheeler was chairman of the general committee, and as such has had his hands very full for the last few weeks. Practically the entire floor space of the hall was disposed of, I understand, and five different florists were among those making exhibits. It's a big thing for a little town like Natick to have an affair like this, and Mr. Wheeler is to be congratulated on the success of this enterprise.

---

One of the New York papers recently found material for a good story in the carnation growing section at Blue Point, Long Island. The assertion was made that 3,775,000 carnations are grown there each season, and no doubt the figures are correct. The pioneer at Blue Point was Mr. F. Abrams, who began in 1902 with one small greenhouse.

In speaking of the effort to get his business on a paying basis, he said:

"Carnations were not at all popular when I began to grow them, but people came to find they were getting more for their money. The carnations last longer than roses and cost less. But it has not been a soft undertaking building this business up from nothing at all. It was a long pull and a hard one for many years."

The newspaper item mentioned says:

"The largest carnation plant in Blue Point belongs to F. B. Abrams. It comprises nine buildings, varying in size from a 400x65 foot structure to a small building of the old type which is used for propagating. The other seven buildings measure anywhere from 40 to 65 feet in width and 150 to 300 feet in length. The amount of coal used to keep these buildings at the right temperature last winter was 550 tons.

"The soil used for the beds is a natural soil, fertilized with manure and prepared fertilizer. The prepared fertilizer is got from the slaughter houses and consists of sheep manure, tankage, bone meal and blood. The blood is in the form of dry powder, crystals, like powdered resin, and got by a process of steam drying by which all the impurities are removed. This powdered blood is the best fertilizer used. It is the most expensive, but gives the plants a better color than anything else can."

Miss M. C. Gunterberg

---

It's unusual to find a woman in the wholesale plant business, and for that reason special attention has been attracted to the remarkable work of Miss M. C. Gunterberg, in Chicago. Miss Gunterberg has been a familiar figure to the florists in Chicago for many years, and is well known in other parts of the country, as she has been a frequent attendant at the conventions and is now second vice president of the Women's Florist Society of America.

In spite of her remarkable business ability, Miss Gunterberg is distinctly feminine and a delightful woman to meet. Many are the words of appreciation given her by men who meet her in a business way, and by women who know her socially. Miss Gunterberg formerly conducted a wholesale cut flower store on Wabash avenue, but several years ago she decided to specialize on bench roses. Of course, she still deals in rooted cuttings and stocks of roses, carnations, chrysanthemums, etc., as well as florists' supplies. But bench roses have been made her biggest seller. She ships them all over the United States, and recently sent a shipment to the Hawaiian Islands.

Miss Gunterberg's business has assumed such proportions that she is now one of the largest advertisers, it is said, from a standpoint of dollars and cents, of any wholesaler in Chicago. Altogether she is a very unusual woman, the kind of woman one always likes to meet.

---

## JOHN LEWIS CHILDS DEAD

John Lewis Childs, one of the largest growers of flower seeds and bulbs, died in his berth on his way from Albany to New York, Saturday morning, March 5. He was returning from a trip to California. Mr. Childs was 64 years of age and had built up on Long Island a very large seed business.

His death will come as a shock to thousands of friends and customers all over the country.

---

Sodemann & Linhardt, the florists, who established themselves in business near the East Long Branch, N. J., depot in 1912, are now fully settled in their new nursery and greenhouses on Rockwell avenue. The firm has six and one-half acres of land and for weeks past have been busy installing a heating plant and greenhouses.

---

James C. Collins, a florist of Holyoke, has filed a petition in bankruptcy.

### "ADVERTISE," SAYS GRAKELOW

#### Well Known Florist Talks to Members of the Trade in Scranton

"There is a love for flowers in the heart of every child. Your customers are made by God," Charles H. Grakelow, past president of the Retail Florists' Association, of Philadelphia, told the members of the Scranton Florists' Club at their first annual banquet. The dinner was attended by more than 125 florists and their assistants, coming from the larger towns and cities in Northeastern Pennsylvania. C. W. Baldwin presided as toastmaster.

The principal speaker told of his having gained success in the floral business from beginning in a basement in an out of the way section of Philadelphia through education and advertising. "If you start to sell carnations to children at six years of age, how great would your business be by the time they have taken their third wife? You don't sell more of your goods because you don't try," he said.

He advised the members of the club to advertise more to get additional business and to treat the customers as though they wanted to sell to them when they come into a store.

A slump is now due in the floral business, he said, and it must be met, but he advised them to band together in the common cause and it will not be felt.

Those present were: A. A. Bonton, James F. Burke, A. J. Bonacuse, Ralph Harwood, John L. Beagle, Glenn T. Markey, Daniel W. Evans, Mrs. D. W. Evans, Mr. and Mrs. T. J. Nolan, Mrs. Mary O'Hara, Etta Gager, A. S. Besancon, Floyd Hallock, A. Zeigler, Frank Besancon, Elizabeth Gibbons, C. H. Jennins, Arnin F. Forchner, Eben Evans, Mrs. Eben Evans, Edward Janne, Mr. and Mrs. Smya Itola, Abda Itola, Esther R. Aten, Anna Griffiths, L. H. Schultheis, Leo Schultheis, Matt F. Brown, A. F. Conwell, Mrs. A. F. Conwell, Francis J. Moran, C. W. Baldwin, Mrs. C. W. Baldwin, Mr. and Mrs. Anton Schultheis, Madge C. Burns, E. J. Manno, Mrs. John G. Hill, Lydia M. Schultheis, Sarah Burkhart, Stella F. Williams, Mrs. Harry Danvers, Dorothy Schultheis, J. LeQuire, Gertrude Schultheis, James J. Gallagher, of this city; Miss Mary C. Wade, Edward C. Wade, Mrs. John Wade, Mr. and Mrs. W. H. A. Schmidt, Mr. and Mrs. Edward Carter and Mr. and Mrs. William Symmons, of Carbondale; Jessie Hill, Waverly; Jule R. Kocha, Joseph Ripple, Sunbury; Arthur Underwood, J. C. Stradling, Charles H. Dillon, Daniel Davis, Mrs. D. W. Davis of Berwick; James J. Palumbo, of Dummore; Mrs. William Bennett, J. H. Webster of Avoca; W. R. MacDonald, A. N. McDonald, of Moosic; John N. Carp, E. J. Le Duc, F. H. Russell, of Danville.

Mr Seymour Grose of Carbone's, Boston, was married last week and his fellow employes presented him with a purse of gold.

## FLORISTS and SEEDSMEN

The popularity of the Dahlia is steadily on the increase and you should try these specially selected cut-flower varieties offered below.

**FRANK A. WALKER** (Decorative) A charming shade of lavender-pink, with long, stiff stems; an exceptionally early bloomer. Strong divisions $3.50 per dozen, $25.00 per 100.

**MADONNA** (Peony-flowered) A very beautiful white, very slightly tinted a delicate lavender-pink. The slight touch of color adds to its beauty. Strong divisions $2.00 per doz., $15.00 per 100.

**MINA BURGLE** (Decorative) One of the finest scarlet Dahlias grown. Flowers are large with exceptionally stiff stems carrying the blooms well above the foliage. Divisions $1.50 per doz., $12.00 per 100.

**LATONA** (Peony-Decorative) An unusual blending of buff and yellow shades giving the popular Autumn tint. Petals are long and flower is nearly full to the center. Divisions $5.00 per doz., $35.00 per 100.

**MRS. WARNAAR.** (Hybrid Cactus) Creamy white, overlaid and blending to delicate pink. Stems are long and stiff. A very large, free-flowering variety. $5.00 per doz., $40.00 per 100.

**MY TRADE LIST** gives complete descriptions and prices of over 300 of the best Dahlias in the world and is mailed free on request.

### COMPLIMENTARY DINNER

**Thomas Roland Honored by the Florists' Association of Boston**

The last meeting of the Florists' Association of Boston took the form of a dinner in honor of Mr. Thomas Roland, the new president of the Society of American Florists. The dinner was held at the Parker House and was largely attended, proving an exceedingly enjoyable event. President Letson was toastmaster and, after an excellent repast had been enjoyed, introduced Mr. Roland, who briefly reviewed the history and work of the S. A. F. He then spoke of the preeminent position attained by New England in the world of horticulture, calling attention to the work of the Arnold Arboretum, the Massachusetts Horticultural Society, the Garden and Florists' Club and other mediums of horticultural interest. He said that no similar organization had so long maintained its activity and position as the Gardeners' and Florists' Club of Boston. Mr. Roland declared that the state ought to have an allied trade organization to bind the various interests together. "We have the skill," he continued, "the intelligence and the material necessary. All we need is leadership."

Mr. John Farquhar was the next speaker and declared that if Boston had a dozen growers like Mr. Roland even Chicago would be sending to that city for its flowers.

He said that there were many plants not now used by florists which might be forced to advantage. They included pyrethrum, hardy spiraeas, and many annuals like lupins, annual larkspurs and nigellas. What this country needs, he declared, is better training in horticulture and gardening. He said there is no place now where finished men can be turned out.

"The ordinary workman," said Mr. Farquhar, "if he plants rose seeds, will throw out all that do not germinate the first year. I have found in one experiment with such seeds that thirty germinated the first year, twelve hundred the second year, and as many more the third year. These are things that must be learned. Then there is the matter of cuttings. Experience has shown that at some time of the year you can make cuttings from almost any plant and have them root. A certain expert in Europe has been getting quick results by rooting the cuttings in a steam chamber. Hot water is given five times a day, and cuttings root in as many days as weeks under the old plan."

Mr. Farquhar advocated taking sixty thousand dollars of the S. A. F.

fund, setting it aside and letting it accumulate until a building could be erected at Washington for educational and experimental work along this line. Such a project, he said, would be worthy the society's efforts.

He also deplored the fact that graduates of the colleges were inclined to look for jobs that required no manual labor, declaring that the president of one college of agriculture told his students that when they had finished with his course they would not need again to soil their hands.

Mr. F. A. Palmer, of Brookline, talked of the satisfaction which comes to the florist from the nature of his business even if he doesn't make a great deal of money.

President Letson told of a recent trip at which he stopped to visit the plant of Bobbink & Atkins. Here he saw a man running rose seeds through what looked like a sausage grinder, the plan being considered a great improvement over the old way of separating the seed. Mr. Letson declared that the buying public was becoming much more discriminating. Formerly the men took almost anything offered them, but now, like the women, are asking for choice varieties and help in arranging them.

During the evening it was voted to change the meeting night from the first to the second Tuesday of each month.

## HIGHER EXPRESS RATES HIT FLORISTS

Florists are affected to a considerable extent by the increased transportation rates of the American Railway Express Co. The increase applies to cuttings, plants, all kinds of greens, ferns and moss, trees and shrubs, changing them from second to first class. Mr. Henry Robinson, of Boston, says that this makes a great difference in shipping costs of greens brought from the south. In spite of this increase, however, the price of some kinds used in great quantities, smilax in particular, has not been raised much, if any, to the retailer. Before the war smilax was $7.00 a case. It is now only $12.00 a case, even though there has been an increase of 20 per cent in cold storage charges in addition to that of freight rates. Empty boxes now cost 20 cents each to return if weighing more than 15 pounds, and 15 cents under that weight. Bulbs and seeds remain in the second class, and, curiously enough, cape jessamines have been left in that class, too. The new express rates are one-third higher.

# Easter Suggestions

**Corsage bouquets** are always largely in demand at this season. Look over your stocks and be sure you are well prepared. Our supplies of Ribbons of all kinds were never finer and we can take good care of your orders at the lowest market prices.

Also our **"Queen Mary" Corsage Shield** as per illustration the ever popular and the best on the market. Everything in **Fancy Florists' Pins** and all other Florist Accessories. Ask us for prices.

## AMERICAN FLORISTS—WAKE UP!

We have been having during the past few years a success in the floral kingdom causing us to act as though it were a natural condition in spite of the fact that not many years ago florists throughout this broad land of ours had to plough hard to get by. It isn't so very long ago that with the rank and file in our business it was some task to meet the coal bills when even long overdue, let alone pay promptly, as is now the case. It isn't so very long ago that with the grower it was early and late in the greenhouse, and not eight or nine hours a day, as at present. Nor was it so very long ago that a majority of the growers could not tell whether they were on the profit or loss side of the ledger. But at present conditions are different.

Most everybody these days comes to town in their automobiles (plural) and also have their business in such shape as to enable them to know what crops and varieties pay them the best; which to eliminate, and which to develop, and in the main are enjoying much deserved success. Some change from former years, as we look back. Thank God for that! We all appreciate that nothing succeeds like success, but we must also plan for the rainy day.

To the man who is planning ahead, whether he be grower or retailer, there is a desire to help continue to progress and he knows that in order to continue his prosperity he must make allowance for continued advertising to help create sales and build good-will, and that the essential means to bring this about is to expend a part of his annual sales to help keep the ball a rolling.

Many of the florists who were alert to the needs of advertising and felt the effects of good times were glad to put a part of their earnings into a national campaign fund, just to help it along. Much like dropping a nickel in a blind man's hat, it might do some good and if it didn't, it didn't cost much anyway. That is the way some entered into the spirit of our national campaign, others, however, took a more serious attitude and gave liberally, were interested in its work and undoubtedly reaped the benefits by tying up to the campaign locally or otherwise.

Now we come to the point. The advertising that the florists have been doing, whether local or national, has helped materially in point of sales and also to arouse many to the needs of advertising. Many have overlooked the fact that it must be carried on continually to be of real benefit and that if we lie down at this time it means getting back to the old conditions of years ago.

There are, however, many men in the craft who have felt its pulse and who wish to further continue the work laid out by the National Publicity Committee, who are seriously and intensely interested, referring, of course, to the men behind the National Growers' Association and those interested in the allied florists' trade associations. These men have seen the light and are doing a big and unselfish job trying to make others see the need of a continuance of the work, and unless we all follow in line we will fall back to former conditions. We have made progress, let us continue.

The growers are realizing the good of national publicity as well as local advertising, but the craft generally have not awakened to the fact that business is slipping back, and unless we fill up the coffers of the campaign fund, the florists' business is going to go back as well as all other lines. In many sections it is very noticeable already and many are asking "how can I increase my volume?" One of the answers is to ADVERTISE locally, and the other is to see that the national campaign gets a'going before we lose the advantages of our previous ads in the national magazines.

Doesn't it make you think that after all we started something towards the higher up idea, and that we should continue. Well, the growers have begun to do things. May they succeed to the fullest extent. The co-operative movements have also started. May they, too, continue to further success to the end that all may see the needs and the good that applied advertising will do to help more people enjoy more flowers. And those directly interested will get better results generally.

Henry O. Havemeyer once said:—"Business men fail because there are a lot of them who are fools. We are all born fools but some of us educate ourselves out of it." Let us take example by looking at other lines of business and why they have succeeded, then ask ourselves what we have omitted that they have continued, and your answer will explain the problem.

HENRY PENN,
Chairman Nat. Pub. Com.

**DREER'S "Riverton Special" Plant Tubs**

The Riverton Tub is sold exclusively by us, and is the best ever introduced. The neatest, lightest, and cheapest. Painted green and bound with electric-welded hoops. The four largest sizes are equipped with drop handles.

## A Smile or Two

It seems that the slogan, "Say It with Flowers," is being given a new twist across the water. Some of the students, according to the London Daily News, found the ordinary old fashioned swear words too bald and vulgar for their use. Accordingly they have begnu to swear with flowers. It is reported that a group of these students were sitting at a tea table in a Chelsea tea shop. One young man, glaring at another, called him a "gilded buttercup." The other, firing up, retorted: "What the golden daffodils do you know about it, you variegated carnation?" Then followed perfect broadsides of botanical bad language. These youth, it seems, are in revolt against the ugliness of our popular swear words and have resolved to form the habit of substituting some epithets of beauty. The effect, no doubt, was absurd—yet hardly more so, I imagine, than the meaningless and debasing expletives in such common use today. Besides, a glance at my new seed catalogue shows me that there is no limit to the dreadful but beautiful things we could call people.

### DIED OF DROUGHT

"Have you any potted geraniums?"

"No sir. We have some very fine hydrangeas."

"Nothing doing! It would be a nice thing to have my wife come home and find the geraniums she left in my care turned into hydrangeas, now wouldn't it?"

### CEANOTTIUS THYRSIFLORUS

The ceanottius or wild lilac is just opening its misty blue blossoms on the mountain sides above Santa Barbara It is such a lovely shrub that we tried growing it in our garden in Weston, Mass. We were not successful with the shrubs we planted, but have three fine little bushes from seeds. In winter we have protected them carefully with leaves and tents of corn stalks. They have not yet blossomed but the flower is so soft and lovely that we hope we shall succeed with it at Hillcrest.

The ceanottius divaricatus is a larger shrub and is often called the soapbush, as from its blossoms can be made an excellent lather with the fragrance of wintergreen. Both of these shrubs are known as wild lilacs from their blossoms, which are softer and bluer than those of the old-fashioned Persian lilacs of our Eastern gardens. They are also smaller in their clustered spikes. Some varieties are white.

A mass of these lilacs on a mountain side has the soft, misty effect of a cloud. They make a pretty contrast with the more intense blue of the tall, wild lupines. While the fields below glow with the deep yellow of the eschscholtzia or Californian poppies, and are darkened here and there with the dense, deep green of the live oaks, from which fragments of gray moss are hanging. Against the horizon stand the tall eucalyptus trees, while in the sunlight valley below the almond trees are in blossom.

# RAMBLING OBSERVATIONS OF A ROVING GARDENER

A writer in the Flower Grower, evidently an amateur, although he doesn't sign his (or perhaps it is her) name, has been discussing the catalogues from the point of view of the average buyer. Some of his (or her) comments are pointed and pat. As for example:

"Then there is 'Totty, the Novelty Man.' Personally, I am a firm believer in novelties. Why do so many people fight shy of a novelty and then envy a neighbor his garden of novelties and up-to-date varieties? Speaking of novelties, here is Farquhar's 'New and Rare Plants,' and Purdy's 'California's Choicest Bulbs,' and Wohlert's 'Oriental Flowering Trees' —Yes, they are illustrated,—profusely, but when I order I'll not regret the extra expense of color prints and half-tones, though I suppose exact facts might have been given in much less space. But I have read descriptions of Gladioli that made me feel that if I saw the plant in the garden I could not distinguish it from the stake to which it was tied.

"Then there is Burpee, good old reliable Burpee of Sweet Pea fame. I have been buying my Sweet Peas and other seeds of him for years and years, and not half a dozen rogues have I ever found among my Sweet Peas. When a firm sells me seeds of good quality, that are true to name, I'm willing to pay a few cents more for color prints and half-tones.

"In order to form an unbiased opinion of the merits of plants, one should read Fuld's and Child's catalogues together. Childs says, 'We introduced the Chinese Woolflower from China. There is not the slightest doubt that it is the most magnificent garden annual ever introduced.' Fuld answers, 'Chinese Woolflower is a freak, fit for a sideshow.' Childs: 'We named and introduced the Golden Glow several years ago.—It bears by hundreds exquisite double blossoms of bright golden color. We regard it as the most desirable hardy perennial. Fuld: 'I have omitted certain flowers which no one ought to cultivate, according to the opinions of gardeners of good taste and refinement. Foremost is the Golden Glow, a hideous plant and abhorrent to all lovers of flowers beautiful.'

Climbing Rose Silver Moon

"In spite of their disagreements I like both. One sentence from Childs' especially interested me: 'We offer very few Dahlias that do not produce flowers on long, strong stems. No matter how good a variety may be, if it is not fit for cutting we do not grow it."

---

I am interested to receive reports from several parts of New England that the beautiful climbing rose Silver Moon is proving much hardier than it seemed likely to be, considering the fact that it contains considerable Cherokee blood. It is truly a splendid rose, and worthy the wide popularity which has come to it. Yet, after all, I do not see that it is finer in any way than Purity, which was put out several years ago by Hoopes Bros. & Thomas, but which is not nearly so well known, probably from lack of advertising. I grow both kinds and find that Purity is very hardy, has good foliage and very large pure white blooms, with golden stamens. Probably the ordinary man could not tell the difference between Silver Moon and Purity. Both are good roses for trellis or arbor. I have observed, however, that Silver Moon displays quite distinct individual characteristics, in some gardens being much more double than in others.

---

The eleventh report of the year's experiences at Hillcrest Gardens, Weston, Mass., has been issued by Miss Marian Roby Case, and as usual it is a very interesting document. Miss Case is doing a remarkable work at Hillcrest, training boys to become good gardeners, good citizens, and enthusiastic nature lovers at the same time. Each summer a series of lectures is given which the boys report in their own way. The papers which result are read at a gathering held at the end of the season, and later are printed in this excellent report.

The report also contains a list of many interesting and unusual plants grown at Hillcrest, with notes upon their habits. In the present report is an interesting account of the vegetables grown from seed sent from China by Mr. Woon Yung Chun, who formerly was in charge of the boys at the farm. One of the most successful, it seems, was a big Wong Bok, a large headed cabbage with wide spreading leaves. The Chinese cucumber has black spines and produces heavily. The Chinese eggplant grown at Hillcrest was about the size of a hen's egg, and white in color. A watermelon from Mr. Chun's seeds proved earlier than the American kinds. And a Chinese leek grown was similar to American garlic.

The many friends in this country of Woon Yung Chun will be sorry to hear that he has had a serious illness, spending several weeks in a Chinese hospital. Previous to that he spent many months on the Island of Haiman, several degrees further south than Formosa, collecting plants and specimens. Evidently it isn't a particularly pleasant country to journey through, as in a letter to Miss Case Mr. Chun reported the fact that they were experiencing the seventeenth day of continuous rain, with no sign of a let-up.

---

## TREATING FROZEN FLOWERS

What is the best method of handling cut flowers when received from the express company chilled or partly frozen? This question was recently submitted by a reader of The Canadian Florist, and it has been answered by Messrs. E. J. Gale, of the John Connon Co., Hamilton, and Ernest S. Simmons, of Simmons and Son, Toronto. Perhaps other florists who have had experience in this matter would give their opinions also.

E. J. Gale, Hamilton,—"Little good can be done with flowers that have been frozen, but the information I can give from experience may be of some use should the occasion arise.

"In cold weather cut flowers should be unpacked at once, and not allowed to be around the store.

"Flowers that have been frozen can be detected at a glance, and the best thing to do is to get all the blooms together and submerge them in cold water. Allow them to stay under for about 20 minutes or half an hour. Then take out, cut the stems, put back in cold water with heads up and in a cool place. If this treatment is not successful, in my opinion there is no hope. However, I would like to hear from someone else along this line."

E. S. Simmons, Toronto,—"Every florist has his own method of handling partly frozen flowers. I know of no method that would give good enough results ninety-nine times out of a hundred to be worthy of using as a formula. When we receive badly chilled or partly frozen flowers we submerge them immediately in cold water for a period of three or four minutes. Then we remove them and wrap or roll them up in paper, and submerge in a large vase containing cold water. This is stood in an ice-box or cooling room for a couple of hours.

"This method often meets with success, particularly if the flowers have not been touched with frost for too long a period."

# ADVERTISING AND SELLING

There are two distinct kinds of advertising. One is meant to sell a certain article immediately. That is the simplest kind of advertising, the kind that is illustrated by the want ad or the department store ads. The other kind is designed to impress the name of a certain article or concern on the memory of the public to such an extent that it will become a household word and make sales inevitable. It is this type of advertising on which big business successes are built. Small men shy at it because they do not get returns the next day or the next week at the outside. Men with a vision employ it, because they are planning for next year and the year after that. Advertising of this sort is truly casting your bread upon the waters. It may not come back for many days, indeed, but back it surely will come in time.

The best advertising doesn't try directly to sell goods. It tries to create faith and confidence in you and the goods you sell. And, of course, the advertising isn't worth anything unless your merchandise and your service make good on the impression which the advertising creates.

Otherwise, it's like food which looks attractive but doesn't do any good. All you get out of it, and all the people who try it once get out of it, is the memory of a disappointment.

The real way to decrease your advertising expense is to increase. It'll start your business growing and pretty soon you'll find the advertising expenditures can't keep up with the growth.

There's a good deal of similarity between advertising and agriculture. You've got to plant the seed and tend it carefully in order to get the harvest.

The truth is that a decent advertising appropriation is an investment, not an expense. It's the too small advertising appropriations that are the expensive ones, for an advertising appropriation of this kind is about the greatest expense a business can endure.

The thing about which every florist wants to be sure is that he gets his advertising appropriation into the investment class and keeps it there. Then he'll begin to experience in his busness some of the wonders and pleasure of compound interest.

As you increase your advertising you increase your business so fast that your expenditure turns out to be a much smaller percentage than the percentage of your appropriation.

### HOW DO YOU FIGURE EXPENSE?

Are your cost figures accurate or guess work? Do you really know what you are making—or losing? How do you figure your own salary? How do your salary costs compare with your other expenses?

These things are worth thinking over just now. The answers may keep you out of bankruptcy in the long run. All too many florists live (temporarily) in a fool's paradise, because their bookkeeping is poor.

Paul Findlay, discussing this matter in the Retail Public Ledger, says:

"A dealer in a midwestern city with whom I talked, told me his total expense was 23 per cent. I asked him how it was divided and he said rent was 11 and wages 9 per cent—'and that's about all of it,' he concluded.

## Rhododendron catawbiense var. compacta (New)

The hardiest Rhododendron known. Bright red-purple. Forms very compact bush with glossy, darkest-green foliage. Splendid clumps from 1 ft. to 3 ft. in diameter, heavily budded. Prices and Catalogues. Hardy American Plants.

## As Sure As You Are A Foot High

many items will be out of the market just when you want them. So why not get our Bulletin right now—a postal card with business address will bring it—and you must be interested in the following:

APPLES, a general list—good kinds too.
PEARS, big quantity Bartlett. Also other varieties, 3 yr. old. Fine for retail trade.
DWARF PEARS too, at right prices.
PEACHES, take no back seat in growing this item. Lots of Elberta, Carman and J. H. Hale.
ORNAMENTAL TREES, Norway, Silver and Ash Leaf Maples, from 6 ft. up to 15 ft. high.
EVERGREENS, about cleaned out, except Arbor Vitae—a good quantity from 12 in. up to 6 ft.
BERBERRY THUNBERGII, you know we are the largest growers in the world. 2-3 ft., 18/24 in. and 12/18 in. grades. Also Seedlings.
CHERRIES, not long on—mostly sour varieties.
CALIFORNIA PRIVET, some nurserymen say it is out of the market—come to us—can offer you 2-3 ft. 18/24 in. and 12/18 in. strong 2 yr. grade.
AMPELOPSIS VEITCHII, strong 2 yr. grade. Also Seedlings at very low prices.
FRENCH APPLE and ROSE STOCK, quoted here at Manchester. Most of them trimmed ready to plant.
ORNAMENTAL SHRUBS, you should see our list before you buy.
ROSES, Climbing and H. P., a long list of scarce kinds.

Please let us hear from you if you want SERVICE and GOOD STOCK this Spring. WE CAN SERVE YOU RIGHT.

**C. R. BURR & CO.**

**Manchester -- -- Connecticut**

I asked him about heat—'furnished by the landlord'; about lights—'Oh, they don't amount to much; not $200 a year'; about telephone—'A mere trifle of $60 the year.' He figured no salary for himself and no interest on invested capital—'Discount more than offsets capital,' he said. But I found that he figured the discount and kept track of it as an earning, while he took no account of the interest charge.

"He did little delivery and so 'didn't worry about it,' but it cost much more than he imagined. He made no allowance for depreciation nor kept any account of markdowns.

"That man was a canny Scot and he had made good money for over thirty years. But it was merely because he had the instinct of the trader, got wide margins, and had a little place to watch. Had he been put into a larger sphere or into a business with many clerks and a multitude of small transactions, he would have to change his methods or he'd have gone broke.

"And even if one sidesteps disaster, where is the satisfaction in fooling one's self? How did that man figure his wage expense was 9 per cent when he himself sold more than any two clerks in his place and charged up no salary for himself? At the lowest calculation his wage expense was between 12 and 13 per cent and his total was not less than 28 and probably it was 30.

"How easy it would have been for him, with ample leisure in his small business, to calculate daily what he was paying for wages, including his own.

"We who perhaps have no soft snap of a business to run must stop, look, listen at all the crossings.

"There is less excuse for going wrong on wages expense than on any other, because it is the simplest of all expenses to keep track of. Given the basic knowledge of what it should be, any man can gauge what he can pay on any given business. Once the standard is ascertained and fixed, this expense can be checked not only monthly and weekly, but daily, at the cost of a very few minutes' time.

"The big items are rent, wages, deliveries. These alone make up such an overwhelming proportion of the total cost of operation that the man who knows what they amount to in his business has the ground quite solidly under his feet. Ten minutes every day probably not more than five minutes to the practiced man will enable you to check up on the percentage cost of these big items. They are the obvious things—plain as the nose on any man's face. Don't make too big a job of knowing where you stand on these items.

"Every other expense item is likewise important, but if you keep after the obvious ones and count in everything that should go there, the rest will soon come easy to you.

"As the most obvious, perhaps, is wages, and as it is the easiest to gauge and regulate to the ups and downs of business, watch it. But in watching it, do not forget your own time, to include your own wages, on the right basis."

---

**Women and Gardens.** "Women always have from the first made a muss in a garden," wrote Charles Dudley Warner long ago. It was a witty allusion to the delinquencies of Mother Eve, but if such a statement were to be made today it would bring down upon the author's head the merited wrath of hundreds of women. The fact is that women are working a revolution in the horticultural world, and without doubt are responsible in large measure for whatever advance is being made in this country. At a recent banquet in Boston, Mr. Robert Cameron declared that the gardener of the future would have to know his business unusually well and keep posted on all lines of his work, because he would have to deal with women who had made themselves practical garden experts. At another banquet this fact was again emphasized by Mr. John Farquhar, who said that women were stimulating new activities in horticultural circles and bringing about a much higher standard through the efforts of such organizations as the Garden Club of America and the National Farm and Garden Association.

---

**Cashing Checks.** We wonder why it is that florists are so often the victims of bad check artists. From all over the country reports keep coming of retail florists who have lost sums large or small as a result of cashing bad checks. There ought to be a rule in every establishment that no check shall be cashed for people not known to the owner. For that matter, some dealers have a rule not to cash checks at all. The statement is often made by a florist that he doesn't like to refuse to cash checks for fear of losing a good customer. A little intelligence, however, will enable any man to steer a reasonably safe course. If you know the endorser of a check is good for the money, and that his business methods are square, it probably would be foolish to turn down a check.

All too often, though, people use an accommodating florist simply as a means of obtaining money out of banking hours, and sometimes this is carried to such a point that it becomes a real nuisance. Not infrequently, too, a clerk is so impressed with the good clothes and polite bearing of a stranger that he accepts a check, especially if he purchases flowers. The excuse is often made that he was "such a nice appearing young man." Eagerness to make a sale should never cause a relaxation of the rule against cashing checks for strangers. It's bad business.

---

**Whys Of Organization** Organization is being preached everywhere in the floral trade, but sometimes it is put on a basis of loyalty and up-to-dateness more than on the grounds of sound logic. For that reason it may be interesting to read the reasons why a man formerly an out and out advocate of cut-throat competition changed his opinions and has become a strong believer in cooperation and business association. Here are the reasons that influenced him in his thinking—ten of them:

First. When I read a bankrupt's list of creditors and find more than one merchant stuck by the same man, the moral shrieks louder than a calliope.

Second. All of us know more than any of us; few of us realize how little most of us know about the daily business of each of us until we begin to meet the rest of us and talk things over among the lot of us.

Third. It's fear that's at the bottom of most of our troubles—fear of competitors, loss of business, of failure. Even timid animals are brave when they run in packs—and they make a larger kill.

Fourth. Merchants suffer more, in mind and estate, from lies told them about one another by their customers than from any other cause—and there is just one obviously sensible cure for that.

Fifth. More or less wise old Ben Franklin said: "We must hang together or hang separately."

Sixth. No, cousin, your problems are not "peculiar." You fellows have the same perplexities, and why waste time and money blundering into a solution alone, when you can get help by being willing to give help?

Seventh. Merchants are all in the same boat—very few ever advance much in profits and prosperity except as the trade as a whole advances. Pull together for the good of all and bring prosperity to you much quicker.

Eighth. You think your competitor a scoundrel—but he thinks you a crook. Both equally right, of course—but it's when thieves fall out that they get into trouble.

Ninth. Civilization itself is organization. What good reason can any merchant give for remaining in his own little business cave, a prey to every beast of trade, when he could find added safety and prosperity in combining with his fellows?

Tenth. I once helped a blind man across the street, and lo! I was safely across myself as well. His cane had found a mudhole that I did not see.

# Coppersmith

## Burpee's New Dahlia for 1921

COPPERSMITH Dahlia is an ideal garden variety which is unsurpassed for cutting or general decorative work. The habit of the plant is perfect, the growth sturdy and upright and only of medium height.

COPPERSMITH blooms early and continuously and is most floriferous. The plants are literally smothered with flowers, which are borne clear above the foliage on stiff, wiry stems. In type it is midway between Peony-flowered and Duplex.

One of the outstanding features of COPPERSMITH is its glorious Autumn color, which may be described as a pleasing shade of light copper or bronze with a glistening-like suffusion of salmon-yellow. The reverse side of the petals is reddish-bronze.

For the past three seasons COPPERSMITH has been one of the most admired varieties in our Dahlia fields at Fordhook. Although brilliant in daytime, the unique color of COPPERSMITH is intensified under artificial light. Awarded Certificates of Merit at the Dahlia Show of the Pennsylvania Horticultural Society September, 1920.

Strong Roots, $2.00 each; 3 for $5.00; $20.00 per dozen, postpaid.

**W. Atlee Burpee Co.**

### THE NEW ROSE ANNUAL

**Full of Interesting Material for Professional and Amateur**

The new edition of the Rose Annual for 1921 will be out probably by the time this appears. It is a handsome book of 188 pages, very up-to-date, and reflects great credit on its editor and publisher, J. Horace MacFarland. There is a splendid symposium in its pages from all the leading rosarians of this day and generation, both amateur and commercial. Everybody ought to have a copy. The members of the American Rose Society get one free, and others can get one for the price of joining, which is only three dollars. The officers of this society certainly deserve our utmost admiration. The society has grown from about a hundred members a few years ago—with the hard work and enthusiasm of its officers—until today they have actually passed the twenty-five hundred mark in membership! Write the secretary today and show your interest. His address is:—John C. Wister, 606 Finance Bldg., Philadelphia. A three will make you a member and get you the great book.

From the commercial grower's standpoint, one of the best articles in the book is by Samuel S. Pennock. He reviews the merits and demerits of all the commercial roses of the day, and sums the situation up to the present to a nicety. His review of the coming and going of popular favorites—and the why and wherefore of their came and went (if you will excuse the bad grammar) is most instructive and interesting, and should be carefully studied by every commercial rosarian. There is much food for thought in his review, both for the grower and the retailer. There are also splendid articles by Charles T. Totty and Wallace R. Pierson on other branches of the commercial field.

Another fine feature is the itinerary of the great rose trip to the Pacific in 1922. But of that, more later. Only, get ready to get excited—all you rose lovers!

---

"McNutt Floral Company" is the name of a new business which has filed application for a charter at Knoxville, Tenn., with a capitalization of $50,000. Those signing the application for a charter are A. J. McNutt, R. W. Perry, C. W. Henderson, D. L. Grover, and T. C. Reep.

### DATES TO REMEMBER

Make a note of these on your March calendar, Mr. Florist:—

March 15—Jackson Day.
March 17—St. Patrick's Day.
March 18—Cleveland.
March 20—Palm Sunday.
March 25—Good Friday.
March 27—Easter Sunday.

And be well prepared in advance for all these important occasions.

# BREEDING CARNATIONS

By C. H. CONNORS
New Jersey Experiment Station

A person who takes up the breeding of horticultural plants, especially those propagated by cuttage or graftage, is as much an adventurer as Columbus or the Pilgrim Fathers. What I mean by that is that he, like they, may have some definite object to attain, but how soon will be the consummation is a question of persistence and great patience.

Horticultural plants are of two general classes, with respect to the method of propagation, viz., those propagated by seed and those propagated by vegetative means, such as cuttings, grafting, and budding. In the first class, breeding may be relatively simple, since an effort is made to maintain strains, and colors within strains, pure by selection. Working with fixed characters, such as pure colors, tall or dwarf habit, weak or vigorous constitution, the breeder can prophesy with a considerable degree of certainty what results will be possible in a given cross.

With plants propagated by vegetative means, there can be no certainty as to what the progeny resulting from any cross will be, except in one or two minor matters, which will be considered later. The breeder of plants of this class must decide whether he will adopt one of two methods: (a) the summary production of new varieties; and (b) systematic crossing and selection along a given line. In the one case, he makes a cross and if nothing promising occurs, discards the whole lot and starts over again. In the other case, he makes a cross and if the desired individual is not found, he selects the ones most nearly approaching the ideal and self-pollinates or crosses with some of the other promising ones or even with the parents. The latter is the more scientific method and will, I believe, lead more surely to results.

### The Botany and Structure of the Carnation

The American perpetual flowering or greenhouse carnation (Dianthus caryophyllus) is believed to be the result of hybridizing a number of species of Dianthus. Just what species were involved or when or where or how this hybridization occurred it is not possible to state. The original form, of course, was a single flower with five petals, one pistil and ten stamens. The increase in the number of petals and petaloid organs has been obtained mainly by means of the division of the stamens, so that a variety like Enchantress may have between 60 and 80 petals, and the number of stamens may be 20 or even more. In the case of some varieties, however, the flowers are imperfect, no stamens being present, as in the old yellow variety James Whitcomb Riley; in other cases, the stamens are present at certain seasons and absent at other seasons, as in White Perfection and Prosperity.

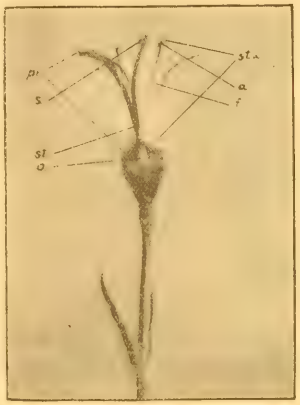

FIG. 1.

### Breeding Operations

The first step in breeding is to learn as much as possible about the species with which the breeder is to work, by reading and cultivation. Study of varieties under varying conditions will frequently give some idea of what effect they will have on the progeny. For example, Matchless is classed as a white but under some growing conditions it carries considerable pink in the petals, so it may contribute pink to its progeny.

The structure of the flower should be studied, to know when the pollen is ripe and when the stigma will be receptive to pollen. Figure 1 represents a carnation flower with the petals removed to show the several organs of the flower.

The next step is the formulation of the ideal for which he is to work. This is usually mental. The next step is the selection of parents that approach nearest to the ideal and cross them. It is well in selecting the parents to use as the female parent the one having vigor, productiveness and flower size.

The tools required in the breeding work are simple. A pair of curved scissors, such as manicure scissors, a pair of forceps, those with curved ends being better, are really all that are needed. A small hand magnifying glass is desirable and it is wise also to have a bottle of alcohol (the denatured kind will do, under the existing circumstances) in which to dip the scissors and forceps after each operation, in order that no undesirable pollen will remain thereon.

## George Watson's Corner

"You in your small corner and me in mine."

When the stranger first comes to Philly he first feasts his eyes on Wm. Penn, then he says: well, let's get some oysters at Kelly's and then let's take a car out to Robert Craig's at Norwood. It's only a twenty-five minute ride and young Robert's there smiling and looking more than ever like his old daddy as the years roll by. You get to Norwood and tramp around among acres of native products in greenhouses and see all the latest. It's getting near Easter, now, so it's roses in pots; lilies in pots; hydrangeas in pots; azaleas in pots; and oh, the most beautiful vistas of cyclamen you will see in America! Our dear old friend the broom is there with its yellow fragrance, sweet and charming, the nearest we can get to our old golden dazzle of the Scottish hillsides, waysides and mountains. It fills the bill sentimentally, as does the present influx of Erica melanthea for our old mountain pink beauty, the Scottish heather. Then we come to the Nile beauty, the calla. Pure, chaste, simple, and charming ever the same since the days of Pharoah except that they've got a golden one now, which seems to reach the untutored hearts of the multitude. Very charming, indeed; but the glistening purity for mine! And as for that "twin" of Jim Brown's—he calls it "Keltic" for some unknown reason—"Siamese" would appear to me to be the word not "Keltic." We Kiltys are sensitive about deformities, else we would never have dared to wear the kilts. And it takes some courage for some of our lady friends to wear these same kilts on Chestnut street today—if they happen to be knock-kneed or bandy-legged.

There is a big vista of Easter lilies and they look fine. A small percentage are rather short-stemmed, but the flowers will be just as pure and fragrant as their big, stately, tall and strapping sisters! How is it we can't get poetical about the cineraria? For flash and show it is hard to beat it. But when you have said that—somehow we sentimentalists, while we love its dazzling beauty, fail to get into raptures about it, and we just pocket the dollar and smile at the neophyte—knowing that in time he will learn that mere color is not everything in flowers, any more than it is in human characteristics. Houses and houses of draceenas, and palms, and pandanus;

Mastica is elastic and tenacious, admits of expansion and contraction. Putty becomes hard and brittle. Broken glass more easily removed without breaking of other glass than occur with hard putty. Last longer than putty. Easy to apply.

very interesting and very beautiful as we walk through.

Then we run up against a human interest. Mike Bogan, with his old clay pipe. The cyclamen expert. My, my. How are you, Mike? Well, well, Gosh, it's but yesterday, thirty-five years ago, since we were arguing geraniums in your old Darby road place. And here you are, live and chipper. Just then who should walk along from the next potting bench but August Lutz, with his overalls on. Gosh, August, with that million of yours laid away, what are you doing here? Before August could reply, Mike butted in and said his women folks get sick of him meddling 'round their household affairs all the time, so he is glad to come out and do a day's work and be happy. I guess Mike's in the same boat and knows what he is talking about. Both these old timers are happiest when they are working at their favorite job. But it isn't the money now. It's because they love it. There's a little touch of human interest wherever you go, if you'll only watch out for it!

And that reminds me that I must send a few lines from you all in the shape of an open letter to the senior Robert. He is 74 now, and nursing the twinkle in his eye down in Porto Rica, but he will be glad to get a wee screed, so here goes:—

Dear Robert:

While you are sitting under your palm trees in San Juan, Porto Rica, these days, when we have a foot of snow to plow through from Lansdown to old Philly, no doubt you like to read between puffs and sips what that kid, George Watson, has to say. Nothing of much importance, you may be sure; but if not instructive it might possibly be amusing to your academic soul. That's the thought and I hope I see that old humorous twinkle at the corners of your eyes. All of which being granted comes the other side of the proposition. Suppose you give out a few of the sublime or otherwise thoughts that are meandering through your old head down there a thousand miles from Key West and fifteen hundred from Philadelphia. I'm sure all us old timers would like to hear from you. Do you approve of Yap being handed over to the Japs? Do you know who is the present King of Abyssinia? Are crullers doughnuts? Would John Walker go first to Kelly's Oyster House or to hear Hughey Dougherty? Do you know how to get to Pettys Island and back in the dark? Do you know that Bill Harris, if he were with us today, would disagree with some of your opinions? And what, particularly, would these opinions be? Would

you stand in a mob at Broad and Locust to hear Bill Bryan talk free silver? These are only a few of the questions we would all like to have your opinion about, now that you have plenty of time and the dracenas are coming along nicely. Growing like weeds, Frank Ross says. So come across, and we will make a "Craig Corner" for you in our modest Boston twice-a-monthly.

GEORGE.

---

Frank M. Ross has purchased the property 1327 Girard avenue, Philadelphia, and intends to establish there Ross Flower Store Number Four in the near future. He will have erected a modern, up-to-date edifice that will be a credit to the business and have all the earmarks of the progressive spirit that has made the name of Ross well and favorably known far beyond the confines of Philadelphia. Broad and Girard avenue has become a great center during the past twenty years, halls, theatres, opera houses and all kinds of thrilling activities having been developed there, and the next ten years will behold even greater wonders in that neighborhood as soon as the Broad street subway is completed. The wideawake ones like Ross are already on the job and their reward will come in due course and in ample measure.

A meeting of the Publicity Committee was held at the New Willard Hotel, Washington, D. C., on January 23rd. Chairman Henry Penn of Boston presided.

The report of H. V. Swenson as manager of the Florists' Publicity Service Bureau was, in the absence of Mr. Swenson, presented by Mr. Asmus. The report covered sales of supplies and bilboards, and showed a profit to the Campaign Fund of about $3,000, produced in the period between Spring of 1920 and the date of the present meeting. Mr. Swenson, in the report, stated that it seemed quite impossible under the conditions existing to meet outside competition in similar lines to maintain the prices necessary to turn over a profit from the Bureau, and asked to be relieved from his proposition not later than June 1st. After a lengthy discussion, Mr. Pierson moved, seconded by Mr. Hess, that the present agreement with Mr. Swenson continue on the same terms, and the motion was carried.

Mr. Asmus reported that arrangements had been completed with the Brinkman Company for the storage of the billboards on hand, and for shipments from storage upon orders coming in from now on. About 157 boards were found to be on hand.

JOHN YOUNG,
Secretary.

New York.

## EDWARD C. DUNGAN

A prominent figure in the American seed trade passed away March 4 when Edward C. Dungan died after an operation in the Medico-Chirurgical Hospital in Philadelphia. He has suffered for years from internal troubles and in spite of the best the doctors could do finally cashed in at the early age of 58. He was general manager of the William Henry Maule Company, in which firm he started as a boy, and remained there all his life except for a brief interval in Newark, N. J., where he and another prominent seedsman of Detroit formed a partnership and took over the Noll concern. After a few years Mr. Dungan disposed of his interest there and returned to his old friend, William Henry Maule. On the death of Mr. Maule, shortly after, more responsibilities were thrown on Mr. Dungan and all of these he stood up under in admirable shape.

His confreres in the seed trade finally dragged him out of his bashful

security, however, and made him president of the American Seed Trade Association, which high honor he greatly appreciated and graced the position with honor and distinction. The last catalogue issued by his firm (1921) is largely his work and shows him at his very best mentally—even to the last of his physical reserve.

A wonderful man in all respects and one whose fine points we hardly begin to fully realize, when along comes the grim reaper and wipes him off, just when we've begun to appreciate the wonderful development of a fine genius to its full flowering. I have been in the seed business myself in Europe and America for the past 45 years and have met most of the great men in that line on both sides of the Atlantic during the period mentioned in one way or another, and I take my hat off to Edward C. Dungan as a great credit and a true exponent of the highest ideals of that ancient craft. And I am sure all who knew him will say, Amen!

GEORGE C. WATSON.

Samuel Untermyer will pay $5,000 to Frederick S. Smythe, a landscape gardener and florist, according to the settlement arrived at before Referee, John F. Ringwood in White Plains, N. Y. Mr. Smythe's action was started to recover $7,800, the balance of a commission of $138,000, for laying out the gardens of Greystone, Mr. Untermyer's Yonkers place.

A. C. Hendry has purchased the Rever Street Greenhouse at Oneonta, N. Y., from A. Angelillo. The latter will continue his store on Broad street.

### HORTICULTURAL BOOKS

EVERY GLADIOLUS GROWER, SEEDSMAN, NURSERYMAN or FLORIST who has but limited space at hand for growing purposes and wishes to realize the HIGHEST POSSIBLE YIELD in FLOWERS, BULBS and DOLLARS per SQUARE FOOT should have a copy of my new book, "THE GLADIOLUS FOR PROFIT." Every detail connected with the outdoor growing of these bulbs for the GREATEST PROFIT is given. Illustrated with twelve halftones from actual photographs showing my intensive system of culture that BRINGS THE PROFIT. A special chapter on DAHLIAS showing the PROFIT WAY to grow these for cut flowers and bulbs and, most important of all, WHAT VARIETIES to grow in the MIDDLE WEST in order to get a crop and the money EVERY YEAR. The merits of ONE HUNDRED and THIRTY varieties of Gladioli are cussed and discussed and the MONEY MAKERS POINTED OUT. There is good money growing the Gladiolus if you START RIGHT, and this book will START YOU RIGHT. Satisfaction or your money back. Mailed postpaid anywhere upon receipt of $1.00. R. M. Champe, Oakland Gardens Nursery, Walled Lake, Mich. Address all letters until April 15, next, to me at my southern plant farm, Box 412, St. Petersburg, Fla.

### PETUNIAS

PETUNIAS.

Diener's Ruffled Monsters, single. The largest and most beautiful ruffled variety of Petunias in existence. Ruffled Monster seed in separate colors, pink, red, variegated, white, red with black center, pale lilac, and all colors mixed.
The following somewhat smaller than the Ruffled Monsters; Pearl of Kentfield, flesh pink frilled, dwarf, purple or blue and white frilled.
Price per package, 50c
Catalogue will be sent free on request. Write for it today.
Mr. W. L. Ferguson, Smiths Falls, Ontario, under date of Dec. 2, 1919, writes us the following in regard to our Petunias:
"Last year I purchased Petunia seed from you. I think every seed germinated and the blooms were the finest ever seen in this part of Canada. Only about 8 per cent of the plants could be classed as common. I want more of the same quality each year."
Mr. Rudolph Nagel, Lancaster, Pa., under date of Dec. 14, 1919, writes us:
"I had, last year, just a few of your Petunias, but I am sure I could have sold thousands of them. They surely came up to your claim and way ahead of my expectation."
RICHARD DIENER CO., INC.
Kentfield, Cal.

GLADIOLI.

Jack London, Anna Eberius, Thomas T. Kent and Mrs. H. E. Bothin; the four greatest and most perfect Gladioli in existence. They have won the greatest admiration wherever shown and will be grown by the million. Our new catalogue, showing some of our varieties in natural colors and describing many of our other new creations, is free on request. Write for it today.

# CRAIG SPECIALTIES

## For Easter and Spring Delivery

**We cordially invite you to our new home at Norwood, Delaware County, Pa., easily reached by Pennsylvania R. R. to Norwood and Baltimore and Ohio R. R. to Holmes Station, or by trolley. Those having their own greenhouses or conservatories would do well to have shipments made during early March.**

### HYDRANGEAS

**The New French Hydrangeas**

All of the varieties here offered have been tested by us under ordinary conditions as to their adaptability to forcing for Easter.

4-in. pots, $6 per doz.

5-in. pots, 6-in. pots and 7-in. pots, heavily flowered, $9, $12, $15, $18, $24, $30, $36, $42 and $48 per doz.

8-in. pots, $4 and $5 each.

April delivery, 2½-in. pots, Hydrangea otaksa, strong plants, $8 per 100, $75 per 1000.

April delivery, assorted French Hydrangeas, 2½-in. pots, strong plants, $8 per 100, $75 per 1000.

### ROSES

**Lady Gay**

In grand condition, trained into fan, globular and pyramidal shapes, $1.50, $2, $2.50, $3, $3.50, $4, $5, $6 and $7.50 each.

Special ball shapes, $2.50, $3, $4, $5 and $7.50 each.

Baskets, $10, $12.50 and $15 each.

Umbrellas, $6, $7.50 and $10 00 each.

**Tausendschoen—Thousand Beauties**

This was our finest and most popular Climber last year, and this year our stock is large and the plants are much finer.

Trained plants, fans, globular and pyramidal shapes, $2, $2.50, $3, $3.50, $4, $5, $6, $7.50 and $10.00 each.

Baskets, $10, $12.50 and $15 each

Umbrellas, $6, $7.50 and $10 each.

**Excelsa—New Climbing Rose**

This variety is known as the Red Dorothy Perkins. The color is brilliant and it is bound to prove the most popular red Rambler. We offer splendid plants in 6-in., 7-in. and 8-in. pots, $2, $2.50, $3.50, $4, $5, $6, $7.50 and $10 each.

Baskets of Excelsa, $10, $12.50 and $15 each.

Umbrellas, $6, $7.50 and $10 each.

**Rosiere New**

Dark sport of Tausendschoen. Very beautiful. A great improvement on the popular Thousand Beauties (Tausendschoen), and consequently a welcome addition to this section. While it has the same habit of growth and general characteristics as Thousand Beauties, the color is superior—a deeper and more even shade of cerise-pink or carmine.

Trained plants, fans, globular and pyramidal shapes, $2, $2.50, $3, $3.50, $4, $5, $6, $7.50 and $10 each.

Baskets, $10, $12, and $15 each.

Umbrellas, $6, $7.50 and $10 each.

**Hiawatha**

One of the prettiest of all the climbing Roses. Deep red with golden disc in center of flower.

Trained plants at $1.50, $2, $2.50, $3, $4, $5 and $6 each.

Baskets, $10, $12 and $15 each.

Umbrellas, $6 and $7.50 each.

**Paul's Scarlet Climber**

One of the most promising climbing Roses yet sent out. Vivid scarlet, semi-double flowers of medium size, produced in large clusters and in great profusion. The color does not burn or fade. This Rose has been exhibited extensively in Europe and received numerous awards. 5-in. and 6-in. pots, trained plants, $1.50, $2, $2.50 and $3 each.

**Hybrid Roses**

Including Ophelia, Donald MacDonald, My Maryland and Mrs. John Dunlop. Very fine plants in bud and flower for Easter sales.

6-in. pots at $15 and $18 per doz.

**AZALEA HINODIGIRI**

Bright red in color and one of the finest and best keeping Azaleas ever sent out. We have never been able to meet the demand at Easter. The variety has the added advantage over Indica Azaleas that it is absolutely hardy.

5-in. pots, fine for baskets, $18 and $24 per doz.

5½-in. pots, $2.50 and $3 each.

6-in. and 7-in. pots, fine plants, $3.50, $4 and $5 each.

8-in. and 10-in. pots, $6, $7.50 and $10 each.

**GENISTA RACEMOSA**

The finest stock of Genistas ever offered. Every plant grown cool, exceptionally well flowered and shapely.

4-in. pots, $6 per doz.

5-in. pots, $9 per doz.

6-in. pots, $12 and $15 per doz.

7-in. pots, $18 and $24 per doz.

Also some very good standard and bush forms in larger sizes at $2.50, $3 and $4.

**GOLDEN CALLAS**

6-in. pots at $1.25 each.

8-in. pots and Ferns at $5 each.

**LILIUM GIGANTEUM**

Suggest placing orders early to avoid disappointment, such as was experienced last year.

6-in. pots, with from 4 to 10 flowers.

8-in. pans, with from 12 to 25 flowers.

Cut Lilies

25c per bud and bloom.

**CINERARIAS**

Largest and finest stock ever offered by us.

6-in. pots, $12 per doz.

7-in. pots, $15 and $18 per doz.

**SPIRAEA GLADSTONE and QUEEN ALEXANDRA**

6-in. pots, $18 and $24 per doz.

7-in. pots, $24 and $30 per doz.

8-in. pots, $36 per doz.

**GARDENIA VEITCHII**

We have an exceptionally fine stock for Easter flowering. There is not anything finer than the small sizes for basket work.

3-in. pots, $5 per doz., $35 per 100.

4-in. pots, $9 and $12 per doz.

8-in. Azalea pots, $2.50 and $3 each.

**LILY OF THE VALLEY**

5-in. pots, 15 pips, $18 per doz.

### DRACAENAS

**Dracaena Godseffiana**

Green and white leaf, very hardy, fine for baskets.

2½-in. pots, $20 per 100.

3-in. pots, $35 per 100.

4-in. pots, $60 per 100.

**Fancy Dracaenas**

We are offering a collection of the new and rare Dracaenas, including Imperialis, Amabilis, Pere Charon, Mandaiana, etc. Very handsome for home decoration or for fancy combination baskets.

4-in. pots, $9 per doz.

5-in. pots, $15 per doz.

6-in. pots, $18 and $24 per doz.

7-in. and 8-in. pots, $3.50, $4 and $5 each.

**Dracaena Massangeana**

The variety with the golden stripe down the center of the leaf. The best of all Dracaenas for the house. We have an exceptionally large stock, well colored and of the very highest quality.

4-in. pots, heavy, $12 per doz., $100 per 100.

6-in. pots, $2 and $2.50 each.

8-in. pots, heavy, $4 and $5 each.

**Dracaena Fragrans**

Plain green leaf.

4-in. pots, $9 per doz.

6-in. pots, $24 per doz.

8-in. pots, $5 and $6 each.

10-in. tubs, $7.50 each.

**Dracaena Lord Wolseley**

One of the very best varieties for Easter and Christmas, being bright red in color. An excellent Christmas variety.

2-in. pots, $20 per 100.

3-in. pots, $35 per 100.

4-in. pots, $60 per 100.

5-in. pots, $15 per doz.

6-in. pots, $18 and $24 per doz.

7-in. pots, $3 and $3.50 each.

**Dracaena Sanderiana**

Small light green leaves, edged with creamy white. Fine for center of fern dishes or basket work.

2½-in. pots, $20 per 100.

3-in. pots, $50 per 100.

**Dracaena Kelleriana (New)**

One of the finest foliage plants for combination baskets or boxes. Improved Godseffiana.

2¼-in. pots, $20 per 100.

3-in. pots, $35 per 100.

4-in. pots, $60 per 100.

8-in. pots, made up, very handsome, $5 and $6 each.

**Dracaena Terminalis**

Exceptionally well colored.

2¼-in. pots, $20 per 100.

3-in. pots, $35 per 100.

5-in. pots, $15 per doz.

6-in. pots, $18 and $24 per doz.

We would suggest ordering the above early as the demand is always great.

**Dracaena de Smetiana**

A strong, vigorous grower, with bold, dark green foliage, which becomes beautifully suffused and variegated.

4-in. pots, $7.50 per doz., $60 per 100.

5-in. pots, $1.00 each.

6-in. pots, $2.00 each.

7-in. pots, $3.50, $4 and $5 each.

**Dracaena Warneckii (New)**

Silver and green leaf. Very durable.

6-in. pots, $30 per doz.

7-in. pots, $4 and $5 each.

**Dracaena Lindenii**

Same type as Massangeana, but with the golden stripes on the outer edges of the leaf.

4-in. pots, $12 per doz., $100 per 100.

6-in. pots, $2 and $2.50 each.

8-in. pots, $5 each.

**Dracaena Longii**

Improved sport of Dracaena Warneckii. One of the very best novelties in foliage plants introduced for years. Dark green outer edge with pure white stripe in center of leaf. Stock limited.

4-in. pots, $5 each.

5-in. pots, $10 each.

**FICUS PANDURATA**

6-in. pots, 2 ft. tall, $2 each.

7-in. pots, 3ft. tall, $2.50 each.

8-in. pots, 4ft. tall, $3.50 each.

**LATANIA BORBONICA**

5-in. pots, $12 per doz., $90 per 100.

6-in. pots, $18 per doz.

**ASPARAGUS PLUMOSUS**

2¼-in. pots, $5 per 100, $45 per 1000.

3-in. pots, $12 per 100, $110 per 1000

**PANDANUS UTILIS**

5½-in. pots, $15 per doz.

7-in. pots, $2.50 each.

**PANDANUS VEITCHII**

Well colored plants.

6-in. pots, $24 and $30 per doz.

7-in. pots, $4 each.

8-in. pots, $5 and $6 each.

10-in. pots, specimens, $10 each.

**ARECA LUTESCENS**

3-in. pots, single, $35 per 100, $325 per 1000.

4-in. pots, single, $60 per 100, $550 per 1000.

5½-in. pots, made up, $150 per 100.

6-in. pots, made up, $24 and $30 per doz.

7-in. pots, $4, $5 and $6 each, made up.

# That Glenn Curtis House You Have Heard About

Ever stop to think that every once in a while some little thing makes about as much noise as a big one? Just for example; we build a big rose house for the Joseph Heacock Company at Roeloff. Along about the same time we finish the charming little L shaped layout for Mr. Glenn Curtis at Garden City, L. I. You hear about as much about one, as about the other.

Which fact sort of seems to indicate that Quality is always the big thing no matter how small the thing of quality is. Admittedly, if this house had been the same size, but in one continuous length, it would have cost less to build. But

what you saved in cost you would have lost in attractiveness.

The L shaped and Y shaped layouts are both so attractive, it's a wonder more are not built. The work room on this one is of greenhouse construction; which by the way is becoming more and more popular now that we have overcome its former objections of being so doggone hot.

And speaking of work rooms, and layouts, and quality, reminds us that we go anywhere for business. Or to talk business. Which facts may hold a hint.

### SHIPPING BY TRUCK

The value of the motor truck for transporting florists' stock for fiarly long distances has just been demonstrated by Carl Grobba of Mimico, Ontario. Mr. Grobba loaded his five-ton motor van on March 3, (which is heated from the exhaust) with Easter lilies for the West Floral Co., London, Ont., and delivered them a distance of 140 miles in their original pots, without a single breakage.

Despite bad roads, owing to the open winter, the construction of new highway, and a stormy day, the distance was covered in ten hours. E. B. Hamilton, manager of the West Floral Co., is quite proud of his firm being the first in Canada to receive such a delivery in mid-winter.

### NURSERY CHANGES IN THE SOUTH

Sigmund Tarnok has severed his connection with the firm of Tarnok & Co., Augusta, Ga., and in future the business will be conducted under the name of the Fruit and Nurseries, successors to the P. J. Berckmans Co., Inc., Augusta, Ga., J. G. Bailie, president. This firm has retained the services of the most experienced superintendent, and foremen and propagators of the P. J. Berckmans Co. They will specialize in ornamentals and have now a large stock in nursery and propagating houses. In addition to the nursery business, they will carry on a thoroughly up-to-date landscape department.

### CONFERENCE OF GARDENERS

On Friday afternoon, April 8, there will be a conference of gardeners under the auspices of the New England Branch of the Gardeners' Association, at Horticultural Hall, Boston. As this will be one of the dates of the great rose show in Boston, the attendance should be large. The directors and trustees will have an executive meeting on the same day.

### THE MARKET

The Easter market is proving highly satisfactory. Stock is being cleaned up almost as soon as it comes in. Prices are about the same as last year, although possibly a little stiffer on the whole. Easter lilies are bringing 25c. Calla lilies are 3 to 4 dollars a dozen. Carnations are cleaning up easily at 10c and are in good quantity. Jonquils are 6c, marguerites are 2½c and some good snapdragons are in at $3.00. There is a good trade in potted plants and on the whole everybody is well satisfied.

## THE TALK OF THE TRADE

I have had plenty of time since coming back from the New York Show to think over some of the things that made an impression, and I suppose I am no different from anyone else when I continue to have in my mind the gardens as the most important point of the show. The F. R. Pierson garden and the John Scheepers, Inc., garden were wonders, and I find myself unconsciously mentioning the Pierson garden first. With all due respect to the judges, I can't possibly put this garden anywhere else excepting first in my mind at all times. It is a fact, however, that I am not able to dissect it and take all the points coming into a decision of this kind. So whatever I say is only from my own personal opinions, and not as an expert. It was beautiful. So was the Scheepers garden. If I could have looked at either one alone, I would have been satisfied.

The color effect, harmony and blending in the Scheepers garden was everything that could be asked for, but it must be a mighty hard bit of work to decide between two such gardens. They were entirely different. The Scheepers garden was distinctly bulbs, while the Pierson garden was an all year bit of work. It was a great bit of pleasure for the public to study the Pierson exhibit, with its gently sloping lawn, beautiful shrubbery effects, rock garden so well placed, sunken rose garden just where it should be and well done, a shrubbery group hiding the garage, and the brook trickling down under the rustic bridge to the water pool. I haven't seen anything that gave me more pleasure at any show in the past, and I know of a lot of commercial florists who spent much time looking over both of these gardens.

The next point that stands out very strongly in my mind was the display of cut roses. Not many years back I don't believe that any of those rose growers would have thought it possible to stage such stock as was shown in New York at this show. Take, for instance, the Premier in One Hundred Class, as shown by Joseph H. Hill Co., and Florex Gardens, the Columbia by Florex Gardens and Duckham & Pierson Co., and those wonderful Hadleys by Duckham & Pierson and Joseph H. Heacock. I doubt if they have ever been done better or within quite a number of points as good.

It wouldn't be fair, either, to leave out Mme. Butterfly, which was done well, and a vase of 100 Dunlop by Joseph Heacock Co. I am not at all surprised that this firm thinks well of Dunlop. It certainly was close competition in the cut rose classes, and it seemed to me that a third prize was practically as good as a first, at least there was no apparent difference except what one would arrive at if scoring them by points.

It was very interesting to me to notice how Hadley stood up during the show. The more double varieties, such as Dunlop, Premier and Columbia, showed not one bit better in the way of keeping qualities than Hadley. This variety held its color with plenty of life and opened up with fine finish. Too bad it hasn't a more agreeable disposition as a grower.

Possibly I didn't pay the amount of attention I should have to the pot roses, but I do know that one variety stands out very clearly. It's a fine rose and all of the commercial men seem to feel the same way about it. It is Paul's Scarlet Climber. Bobbink & Atkins had a nice lot of them. The flowers are large, practically as large

Robert Pyle, President of the American Rose Society

as the ordinary lot of forcing cut roses, open up with a nice finish, and have a color that is very rich, dark, even, and with a lot of life and no blue or flat shades showing.

W. Atlee Burpee had a very fine display of cut sweet peas. Right in the center of the group was one that I mentioned last year, which showed up just the same this year, to my mind the best of the whole lot. It is Mrs. Kerr, orange salmon color,—that is my own way of describing it for color, but the nearest I can come to it. It is lively, heavily flowered, of fine size and form, and good stem. There were a lot of others very good, but outside of Mrs. Kerr there was only one that made a particular impression upon me, and that was Early Aurora. I think the best way I can describe that is to say that it had a splashed effect similar to the old carnation Prosperity, bright pink penciling over a background of light pink, shading almost to white. I don't remember the names now, but there were several very good lavender and blue sorts which were not of the better known ones.

The Julius Roehrs garden was a point of interest every minute of the show. The public seemed to take great delight in taking a walk through "The Idle Hour." There was a general lot of evergreens, flowering shrubs, and small flowering plants, that gave much delight to the amateurs.

In the carnation classes there was the usual high class lot of stock shown, with a good representation from the Boston growers. The Springfield Floral Co. did mighty well. They were heavy winners, I believe, getting an award in every class they entered. It was very noticeable, however, that cut carnations did not keep as they should. Possibly this might have been due to some local condition in the hall, but they did not stand up as we have a right to expect from carnations.

Primulas, both malacoides and obconica, were fine, and there was a fine lot of azalea. I am sure many a store man looked with longing eyes on these fine plants of azaleas, so well colored, just as good as in the olden days when we could get them from Belgium each year and finish them as they should be.

From all I understand, the attendance of the show was ahead of any previous year, and while it is a fact that the expense this year had been greatly increased on account of a much larger amount being devoted to publicity, as well as the doubling of some awards, such as for the gardens, for instance, there is no doubt that the show has been financially a huge success. Every day between the hours of 1 and 5 there was such a crowd that it was difficult to get around, and we in the trade were content to give up inspecting the show, as it wasn't possible to do it with comfort until the crowd thinned out.

---

I wish it were possible to engrave on the minds of every person who is shipping rooted cuttings of any plant, no matter what it is, the danger of packing such stock with too much moisture. Time after time from the beginning of the season until it ends I run into cases where growers have bought stock and received it in damaged condition, for no other reason in the world except that the cuttings were packed too wet. It doesn't make any difference whether it is carnations or coleus or petunias, or what it may be, and the peculiar part is that when a grower gets an order for shipment from some distance he immediately seems to think he must pack the cuttings with more moisture. The moss is not squeezed out dry, and the positive result is that that stock is damaged in transit.

Cuttings don't need anything more than a little moss that has been squeezed out just as dry as it is possible, and plenty of paper around them, and beyond that, this paper should not go up to the top of the cuttings. All that is necessary and all that is safe is to wrap the paper around the roots, protecting them from being broken off, and if the tops are left open they are much better off.

Paste this little point in your hat and keep it there. If you think the cuttings can be delivered immediately, be careless about moisture, but if you think that they may be on the road several days or a week, the less moisture you use the better. Don't forget that carnation cuttings shipped to England can only be shipped with safety by being packed with no moisture at all. And I mean that just as strong as I say it. Unrooted cuttings, for instance, are taken from the plants, never immersed in water or sprinkled, not wrapped in newspaper, but wrapped in wax paper, and sent to England in that condition, arriving there safely and practically always giving good results when they are put in the sand to be rooted.

---

It is evident that there is going to be a big round-up of rosarians in Boston for the show at Horticultural Hall, April 6-10. Pres. Robert Pyle, of the American Rose Society, will be on hand, of course, and if the show proves to be as big a success as is anticipated will receive many congratulations. Mr. Pyle has worked hard for the interests of the society. Charles Totty, J. Horace McFarland, Wallace Pierson, F. R. Pierson, and Dr. Van Fleet are among the other rose enthusiasts who probably will be on hand.

---

Nurserymen will be interested to learn that the Bay State Nurseries, in North Abington, Mass., are planning to raise ornamental seedlings for the trade on quite a large scale. Mr. Wyman, the proprietor, states that a farm in Hanover, a nearby town, has been purchased for this purpose, and that about five acres will be given over to the enterprise at the beginning, with an experienced man in charge. It is interesting to find that some of the nurserymen in New England are willing to take a chance on the continuance of the Federal Horticultural Board's embargo on foreign plants to launch a venture of this kind.

Mr. Wyman's establishment is one of the most complete nurseries in the east, at least among those devoted to ornamentals, and has been built up largely through his personal efforts and along rather unusual lines. I had the pleasure a few days ago of going through his storage house, which expresses about the last word in that direction. This building is 150 feet long, and built with very thick walls having three dead air spaces. In the first place it was constructed with a flat roof, but this roof absorbed too many of the sun's rays, and accordingly a double pitch roof has been built over it, with the result that the immense storage room remains remarkably cool until summer is well advanced.

When I passed through the house it contained a large stock of roses in bins, and it seemed to me that they were among the best plants I have ever seen offered. I was interested, too, to note that they included many of the newer varieties, among them Columbia and Los Angeles.

### BOSTON'S ROSE SHOW

**It Promises to Equal Last Year's Orchid Show in Size and Quality**

Everything points to a big exhibit at Horticultural Hall, Boston, from the 6th to the 10th of April, when the National Rose Show will be held there. Many large entries have already been made, and the American Rose Society is working in close co-operation with the Massachusetts Horticultural Society to make the event a big success. There will be lectures every day. The program is not quite complete, but J. Horace McFarland is to speak on "The Roses of America" on Thursday; Charles H. Totty, on "Roses" on Friday, and W. N. Craig, on "The Culture of the Rose in New England" on Saturday. The Hall will be lavishly decorated and a big attendance is looked for.

### NEWS NOTES

The next meeting of the Gardeners' and Florists' Club, Boston, will be held April 20 instead of on the 19th, the regular meeting night, the 19th of April, being a holiday. The speaker of the evening will be Mr. B. F. Letson, of Carbone's, who will talk on "Flower Arrangement" a subject to which he has given much attention, and about which he has frequently lectured.

The many friends of W. N. Craig, Secretary of the Boston Gardeners' and Florists' Club, will be glad to learn that he has largely recovered his health.

## STUDENTS AND JOBS

### Prof. White Claims College Boys are Not Looking for Soft Snaps

March 16, 1921.

Editor Horticulture:—

I have read the statement, credited to Mr. John Farquhar, in your edition of March 10 to the effect that the graduates of Agriculture Colleges are inclined to look for jobs that require no manual labor. In my twenty-five years of association with students I have not found this to be true. I have known of but few graduates in floriculture, at least, who were looking for "soft spots." If Mr. Farquhar can name ten definite cases of which he knows, I can name twenty-five where the young men have gone out to the hardest kind of manual labor and have made good.

I wish also Mr. Farquhar would tell us the name of the Agriculture College President who "told his students that when they had finished his course they would not need again to soil their hands." If a man of that type heads an Agricultural College, that institution ought to be boycotted.

We try to teach our students the dignity of labor but we do not teach them that dignity forbids soiling their hands, if we did we would not give them practical work applying top dressing fresh from the cow stables to the rose beds with their hands, and so far as I have been able to learn there is no better way, still I have never had a student rebel or even grumble. This, however, is not the ordinary type of instruction we give our students for we endeavor to train them along more scientific lines; nevertheless, we try to keep their "feet on the earth" and train their hands to do manual labor provided they have never been trained before coming to college.

Our farm practice requirements are that when a student goes out for practical training to a greenhouse establishment the owner shall report to the head of the Department regarding the quality of his work. I have had no adverse reports regarding students, who were really interested in their work. As in every other occupation we occasionally get slackers; men who want to bluff their way through college as they plan to do through life, but these are not the majority. Probably these exceptions are the men Mr. Farquhar has been unfortunate enough to meet.

I agree with Mr. Farquhar in his statement that "there are no educational institutions in America where

# Four Great American Hybrid-Tea Bedding Roses

**ALL ARE OFFERED IN STRONG TWO-YEAR-OLD PLANTS.**

### Mrs. S. K. Rindge

(Howard & Smith, 1920).

This is, undoubtedly, the finest yellow Rose we have. While it in some stages of development, as well as in growth, resembles Golden Emblem, it is a stronger grower, and its rich chrome-yellow flowers as they mature, become suffused with salmon-pink.

Strong two-year-old California-grown plants, $1.50 each.

### Miss Lolita Armour

(Howard & Smith, 1920).

The unique coloring of this novelty is a combination of colors difficult to describe, and it is absolutely distinct from all other varieties. The flowers are of large size, full double, with petals of great substance. As the flowers expand they develop to a deep, coral-red with a golden, coppery-red suffusion. The base of the petals is of a rich golden-yellow with coppery-red sheen; delightfully fragrant. The plant is a strong, vigorous grower and very free-flowering. A Rose for which we predict great popularity.

Strong, two-year-old, California-grown plants, $1.50 each.

### Rose Marie

(Dorner, 1918).

A most pleasing shade of clear rose-pink, with ideal long shapely buds which open to very large flowers of good form. The plant is a strong, vigorous, healthy grower, and remarkably prolific. We consider it the best bedding Rose of its color yet introduced. $1.50 each.

### William F. Dreer

(Howard & Smith, 1920).

A beautiful Rose of the same parentage as Los Angeles and which, for delicacy of coloring, is incomparable with any other variety, it reminding one of the delicate tints of some varieties of water lilies. The flowers, which are similar in shape to Los Angeles, and like that variety, beautiful in all stages of development, are at their best in the half-expanded flower. These, in expanding, are of a delicate silvery-shell-pink. The base of the petals are of a rich golden-yellow which, at certain stages of development, gives a golden suffusion to the entire flower, this golden suffusion being particularly brilliant early and late in the season.

Strong, two-year-old, California-grown plants, $1.50 each.

NEW AMERICAN HYBRID-TEA ROSE WILLIAM F. DREER

### Gorgeous New Climbing Rose, Paul's Scarlet Climber

This is without question the most important addition to our list of Climbing Roses in many years; no other Rose in any class can compare with it for brilliancy of color, which is a vivid scarlet that is maintained without burning or bleaching until the petals fall. The flowers are of medium size, semi-double, very freely produced in clusters of from three to six flowers each on much branched canes, the plants being literally covered with flowers from top to bottom. It is of strong climbing habit and perfectly hardy. This Rose has been most highly commended by the English horticultural press. It was awarded a Gold Medal by the National Rose Society and an Award of Merit by the Royal Horticultural Society of England, and was also awarded during the summer of 1918 the much-coveted Gold Medal at the Bagatelle Gardens, Paris. Strong two-year-old plants, $1.50 each.

## HENRY A. DREER, 714-16 Chestnut St., Philadelphia, Pa.

**The above prices are intended for the trade only.**

finished men can be turned out." I know of none in the world. If the men were "finished" their life work would be of little value to them. Most of us learn something from our daily experiences. However, my limited opportunity for study of the methods practiced in foreign schools of horticulture has led me to believe that American methods of horticultural training are far better for present day American conditions than are the European methods.

Yours truly,

E. A. WHITE.

Head of the Department of Floriculture, New York State College of Agriculture.

## CHANGES AMONG THE GARDENERS

W. D. Robertson, who recently resigned his position as superintendent of Chieftains, Port Chester, N. Y., accepted a similar position on the estate of E. E. Smathers, Purchase, N. Y., succeeding Joseph Holmes.

Arthur Potter for a number of years foreman at Hammersmith Farm, the estate of Mrs. H. D. Auchincloss, Newport, R. I., has succeeded John Mahan, superintendent, who has resigned.

Clunas, until recently foreman on the Arthur Curtis James estate, Newport, R. I., is now in charge of the estate of Mrs. Wm. Grosvenor, Newport, R. I.

John Mair, who resigned his position as gardener to Mrs. A. K. Luke, Irvington, N. Y., has accepted the position of gardener on the estate of Mrs. George A. Joslyn, Omaha, Nebraska.

Judge Marean
Less than ½ Natural Size

# *Eclipsed!*

THOUGH awarded Gold Medals wherever exhibited (in non-competitive way) Marean Dahlias do not need this visible sign of man's recognition of merit. Supreme creations of a sublime flower, they will be a monument to a man's love for the Dahlia, when scores of now popular standards will be but a memory.

Marean Dahlias are sold by the House of Scheepers exclusively at prices that reflect the efforts it took to create them. A beautifully printed book, showing some of the flowers in natural colors and size, is available for true Dahlia hobbyists desiring the best regardless of cost.

May we hope to count you among those who, this coming year, will share the delights of exclusive Dahlia connoisseurs everywhere?

***John Scheepers, Inc.***

***522 Fifth Avenue*** ***New York City***

## CHICAGO FLORISTS' CLUB

At the last meeting of the Chicago Florist Club the following applications were presented for consideration:—Frank M. Suttle, 225 N. Michigan avenue; Edward L. Martin, 174 N. Wabash avenue; Alec F. Gardiner, 11361 Michigan avenue; John H. Paddon, 318 Center street; W. J. Sharpe, 904 N. LaSalle street, Seedsman with W. W. Barnard; Oscar Anderson, Morgan Park, Ill.

It was decided to have Ladies' Night at the next meeting, April 7th. This matter was placed in the hands of T. E. Waters, Chairman of the Good of the Club Committee.

Mr. James Morton pointed out the fact that one of the Eastern trade papers had been boasting about Boston being the home of many presidents of horticultural organizations. During his discourse Mr. Morton pointed out that we had one gentleman here in Chicago who is president of three organizations, and we have another gentleman who is president of two horticultural organizations. We have many S. A. F. ex-presidents, and it is almost impossible to go through the market on any occasion without running across numerous horticultural dignitaries.

Mr. F. Lautenschlager called attention to the Pageant of Progress which will be held in Chicago July 30th-August 14th. Mr. Hilmer Swenson and others also spoke upon this matter. President Kohout appointed the following committee to represent the Chicago Florist Club on this occasion: Mr. J. E. Pollworth, Mr. Hilmer Swenson, Mr. F. Lautenschlager, Mr. A. A. Setterberg.

F. LAUTENSCHLAGER, Secretary.

## HARTFORD GETTING READY

The Hartford (Conn.) Florists' Club has engaged Foot Guard Hall for the national convention of Carnation Growers here early in January. Hartford was decided upon for this convention through the influence of A. N. Pierson of Cromwell, who won so many prizes at the show in New York. About 600 delegates from the United States and Canada will attend, and there will be a floral display that will excel anything ever seen in this state. This is the first time that the growers selected a city in this state for their annual gathering.—Hartford Courant.

## A Smile or Two

A florist in search of a job found his way to the city and was fortunate in hiring a horse and buggy to drive around. Suddenly the horse stopped and absolutely refused to budge.

After exhausting his vocabulary, the florist scratched his head in despair, and at that moment a small boy chanced to pass by.

"What's up, mister?" he inquired.

The man confessed he could not make the horse move. The youngster said never a word, but solemnly first raised one hoof and looked at it, then the next, and the next, but when he came to the fourth the horse refused to permit that one to be lifted. After a great struggle, in which the driver assisted the boy, the horse's hoof was lifted, and there on the street beneath lay a quarter.

---

"My wife is talking about raising some 'Jack' roses."

"That so?"

"Yes; she asked me last night if I couldn't get her a few jackpots to put 'em in."

---

"What are all these withered blossoms?"

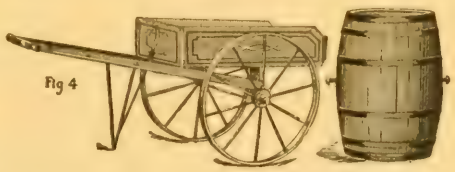
"Evidence in the case, Your Honor."

"Huh?"

"He wrote no letters during the courtship. Merely said it with flowers."—Louisville Courier Journal.

### SWEET PEAS AND MENDELISM

Flower growers and especially breeders and hybridizers are giving much attention just now to the laws and principles of Mendelism. In fact, no breeder can afford to neglect to familiarize himself with the results of Mendel's experiments, and sweet pea growers are interested to note that his first experiments seem to have been made with one form of peas, because as that plant depends upon self-fertilization, he was able to cross the varieties without fear of the results being affected by the interference of insects, the wind or other agencies.



The pea has diverged under cultivation into a large number of well-marked varieties—tall and dwarf, white-flowered and colored, green-seeded and yellow, smooth-seeded and wrinkled. Let tall peas and short peas be crossed with one another. The result of such a cross is that all their descendants in the first generation will be tall. It is therefore assumed that in this particular hybrid tallness is what is called the "dominant" quality, and shortness the "recessive."

But the results in the second generation betray the change effected in the germ-cells by the original cross. One-quarter is short and one-quarter tall, and the descendants of these two classes retain, unless they are again hybridized, the qualities of tallness and shortness respectively forever. The other half of the second generation will be tall—another proof that in this particular combination tallness is the "dominant" quality—but they will not produce more than a certain definite proportion of tall descendants. Mendel experimented with other pairs of contrasted characters and found that in every instance they followed the same scheme of inheritance. Thus, colored flowers were "dominant" to white, in the ripe seed yellow was "dominant" to green, and round shape was "dominant" to wrinkled, and so on.

Having determined a general scheme of inheritance, which experiment showed to hold good for each of the seven pairs of alternate characters with which he worked, Mendel set himself to providing a theoretical interpretation of this scheme, which, as he clearly realized, must be in the terms of germ cells.

One of the foremost exponents of the law of Mendelism is Prof. R. C. Punnett, and his work, entitled "Mendelism" (Macmillans), is authoritative. In this he has a good deal to tell us about the interaction of certain factors, which explains, for instance, how certain strains of white sweet peas will, when crossed together, produce only red-flowered progeny.

In 1906 Prof. W. R. Bateson and Prof. Punnett made the discovery of the linkage of factors. They found that when a sweet pea with factors for purple flowers and long pollen grains was crossed to a pea with factors for red flowers and round pollen grains, the two factors that came from the same parent tended to be inherited together. This was a very important discovery in more ways than one. It led on to the idea that the factors lie in definite order in the nuclear bodies called chromosomes, and its extension has shed some light on various puzzling facts. Since the elucidation of the nature of color in the sweet pea, phenomena of a similar kind has been witnessed in other plants, notably in stocks, snapdragons and orchids, as well as in poultry and animals.

# RAMBLING OBSERVATIONS OF A ROVING GARDENER

I learn from Mr. Harlan P. Kelsey, of Salem, Mass., Secretary of the American Joint Committee on Horticultural Nomenclature, that it has nearly completed the herculean task assigned to it. It has been a tremendous undertaking, much bigger, in fact, than will be realized by those who profit by it. In a way it will doubtless prove more or less of a thankless task, too, because there will be a disposition to criticise and find fault. Nevertheless, the whole horticultural world will owe a debt of gratitude to the men who have labored so hard to bring about a greater uniformity in the use of plant names.

The committee has had the co-operation of practically every horticultural society of national scope.

If all the publications, including the many catalogues and bulletins issued by nurserymen and seedsmen, follow the rules laid down by the committee, it will greatly simplify the labors of the horticultural writers, and no doubt rejoice the hearts of the proof readers everywhere.

One of the most important rulings is to the effect that no capitals are to be used for specific names, regardless of their derivation, even if they are given in some person's honor. Thus Malus sargenti will be spelled with a small s, just as will Berberis thunbergi. At the same time a list of Horticultural variety names will be given under the different headings, so that in the list of Syringas, for example, there will appear the Marie Legraye lilac, the Ludwig Spath, etc. The distinction will be clear enough for everybody to understand.

The number of hyphenated words has been greatly reduced, nearly all names that have been used with a hyphen between them now being considered as one word. It has been made a uniform ruling that all latinized words, both specific and varietal, shall be spelled with a single i, thus Veronica wilsoni instead of V. Wilsonii.

No doubt these changes will mean a lot of work for the catalogue makers, but if they adopt them generally the catalogues will have a much more uniform appearance, and will be more acceptable to the layman.

In the names of peonies, irises, gladioli and the like where many duplicates are known to exist and where there are old varieties which ought to be discarded, the decisions of the societies representing these flowers have been followed, but the committee has insisted that there shall be no two plants of any one species bearing the same name. It has been left to the society to decide which of the two peonies of, we will say, John Smith, is to be accepted, and which is to be rejected, but only one will be allowed in the printed list.

Altogether the results of this work are bound to be of tremendous value, and it is to be hoped that there will be a general and immediate effort on the part of everyone dealing

Avenue of Magnolias at Rochester, N. Y.

**WE NEED ALL OUR LAND FOR IRIS AND PEONIES**

Who will help us clear it by using some of the following-named stock? All good stock but we need the room.

350 Norway Spruce, 2-10 ft.
20 Koster's Blue Spruce, 5-9 ft.
9 Concolor Spruce, 4-6 ft.
12 Cut Leaf Weeping Birch, 16-18 ft.
5 Purple Beech, 10-12 ft.
100 Purple Wistaria
75 White Wistaria
80 Excelsa Climbing Roses xxx
20 Silver Moon C. Roses xxx
10 Yellow Rambler Roses

Symphoricarpus vulgaris and racemosus, Deutzia Pride of Rochester, Hydrangea arborescens and many others.

6000 Berberi thunbergii, 1-yr. seedlings to strong, husky plants 3 ft. and over.

Come and give the above "the once over." It will bear inspection.

**GEO. N. SMITH**

with horticultural names to conform to the committee's rulings.

The Department of Floriculture at the New York State College of Agriculture has been strengthened in a marked degree by the appointment of A. H. Nehrling as Assistant Professor of Floriculture.

**Prof. A. H. Nehrling**

For the past five years Professor Nehrling has successfully conducted commercial greenhouses and a retail store at Crawfordsville, Indiana. When he bought the business it was considerably run down and during his management he has not only considerably more than doubled the business but has made many permanent improvements in the equipment. This practical experience in growing and retailing with Professor Nehrling's previous training and experience has fitted him splendidly for teaching floricultural subjects.

Some time ago I had occasion to ask Mr. B. Hammond Tracy, the well known gladiolus grower of Massachusetts, in regard to the propagation of gladioli by the cutting of the bulbs, and found that he didn't approve of the plan. "I have tried it myself several times," said Mr. Tracy, "and find that no gain whatever was made. Cutting the bulbs will not make additional eyes, and every eye should produce a bulb. If the bulbs are planted without cutting you get the production of bulbs in a clustered form. Although in ordinary culture they may be as large, but they will give as good if not better results. No gain is made in bulblets as the bulb with several eyes is past the age of bulblet production."

A rather inexcusable mistake was made in a recent issue in the editorial on Peony Discards, when Mr. Wister was quoted as having a list of peonies which should be done away with. Of course Mr. Wister is not, as was intimated, president of the Peony Society. Honors in plenty have come his way, but this is not one of them, and the suggestion as to discards was made by another gentleman.

## SEEDS OF THE BIG TREES

The longevity of life of various seeds is an interesting study. We hear of seeds germinating which have been found with the old Egyptian mummies. Other seeds fail to come up if kept much shorter periods.

In 1881 some cones of the Sequoi Gigantea, or Big Trees of California, were brought home from the Mariposa Grove and laid away in a bureau drawer for twenty years. They were then planted and now a tree from ten to twelve feet tall has grown from one of them, reaching to the top of the greenhouse in which it is kept through the winters. It bears tiny cones but none of the seeds from them have germinated.

The speed with which some seeds germinate is astonishing. One Tuesday, several years ago, some hollyhock seeds were planted. The following Sunday they had pricked up through the ground.

Lately we have received fifty packages of seeds from Labrador, varieties unknown. They were collected through this last year. We are interested to learn what success we shall have with them. Our seeds of annual flowers from South Africa did well.

# THE FLOWERING CRABS (Maluses)

The Flowering Crabs have few rivals among the gorgeous spring-flowering trees and shrubs. At the Arnold Arboretum one of the important events of the year is the blooming of the Crabs, followed by the showy fruit.

Of easy culture, and planted singly or in masses give remarkable and quick results. While beautiful on the small lawn, Flowering Crabs are used to the greatest advantage on a large scale in woodland and other mass plantings, as are Dogwoods and Hawthorns. No group of plants have greater value than the Maluses for enlivening open forest parks and country roadside; they present striking effects when planted on parking strips of boulevards or wide city streets.

BOXFORD NURSERY, EAST BOXFORD, MASSACHUSETTS, offers eight of the finest varieties. Flowering Crabs are quite scarce and orders should be placed early.

Special Descriptive List and prices on request. Address

*HARLAN P. KELSEY, Owner, Hardy American Plants, Salem, Massachusetts*

# ADVERTISING AND SELLING

It has been of great interest to follow the advertising campaign of Mr. J. K. Alexander, of East Bridgewater, Mass., for I know of no grower in his particular line who has carried on an advertising campaign so systematically. It is Mr. Alexander's method to concentrate on one large city at a time, and to spend the greater part of his appropriation there, although this doesn't mean that no advertising is done in other cities. I am speaking now of newspaper advertising, quite apart from that which is done in the general magazines and in the trade press.

Mr. Alexander has very kindly given me some facts and figures regarding his campaign in Philadelphia, where he has tried out the leading papers and where he has taken a large amount of space.

"The Philadelphia Ledger pulled best last year," said Mr. Alexander, "so I am using 2,400 lines this year in that paper. The Inquirer, however, has given the best results in my newspaper advertising for five consecutive years, so I have a standing contract of a hundred lines throughout the spring season, which commences March 6. I am using smaller space in the North American and Record. Each of these advs. runs on Sundays in the special garden and farm department, and the editors are glad to have me contribute special articles which are used without charge. I also give them pictures made in my fields and individual dahlia specimens to use with any articles on dahlia growing which they may publish. All this, of course, is of material help to me. There is no better way of getting people interested than to have a special story with illustrations in all prominent garden issues. In some of the papers my big display advertisement is preceded by several small cards, which gives me special rates, and I also use the small advs. early in the season, to create a demand for my catalogue.

"I am running small trial orders this year in New York City, and Albany, as next year I plan to use my strong newspaper campaign in New York City.

"This with my national magazine advertising, and of course my horticultural advertising, makes a very good campaign. In each ad. I find it pays to use a collection that sells for even dollars, and the $1.00 collection of five different dahlias seems to appeal to most purchasers. Many will 'risk' a dollar that would not risk more.

"I find by using a cut of a dahlia in the ad, that the results are much better than where no cut is used. I use my trade mark portrait cut in all my ads. as a means of connecting up things, also my slogan 'The Dahlia King.' Many times I have letters come just addressed 'The Dahlia King,' East Bridgewater, while some say Bridgewater, and Bridgeport. The other day I had one addressed to The Dahlia King, somewhere in Massachusetts, and was sent from a small town in New Mexico. I was surprised that the Boston Post Office was able to supply the address, but presume it

## As Sure As You Are A Foot High

many items will be out of the market just when you want them. So why not get our Bulletin right now—a postal card with business address will bring it—and you must be interested in the following:

APPLES, a general list—good kinds too.
PEARS, big quantity Bartlett. Also other varieties, 3 yr. old. Fine for retail trade.
DWARF PEARS too, at right prices.
PEACHES, take no back seat in growing this item. Lots of Elberta, Carman and J. H. Hale.
ORNAMENTAL TREES, Norway, Silver and Ash Leaf Maples, from 6 ft. up to 15 ft. high.
EVERGREENS, about cleaned out, except Arbor Vitae—a good quantity from 12 in. up to 6 ft.
BERBERRY THUNBERGII, you know we are the largest growers in the world. 2-3 ft., 18/24 in. and 12/18 in. grades. Also Seedlings.
CHERRIES, not long on—mostly sour varieties.
CALIFORNIA PRIVET, some nurserymen say it is out of the market —come to us—can offer you 2-3 ft. 18/24 in. and 12/18 in. strong 2 yr. grade.
AMPELOPSIS VEITCHII, strong 2 yr. grade. Also Seedlings at very low prices.
FRENCH APPLE and ROSE STOCK, quoted here at Manchester. Most of them trimmed ready to plant.
ORNAMENTAL SHRUBS, you should see our list before you buy.
ROSES, Climbing and H. P., a long list of scarce kinds.

Please let us hear from you if you want SERVICE and GOOD STOCK this Spring. WE CAN SERVE YOU RIGHT.

**C. R. BURR & CO.**
**Manchester -- -- Connecticut**

was from my continuous advertising of The Dahlia King.

"Another slogan that gets across the great number of forms and varieties of Dahlias, I have just coined is 'A Hundred Forms, A Thousand Colors' used in connection with the ad. heading of 'The Modern Dahlia.' It also helps educate the public to see that the dahlia of today means some-

Mr. J. K. Alexander

thing beside the common old-fashioned double dahlias. Most all my advertising is of an educational nature, and my catalog is advertised you will see as 'full of Dahlia information' and telling the 'whole story' about Dahlias, Gladioli, etc.

"I also get across the fact that my catalog is abundantly illustrated and worth any garden lover's time, which seems to have value."

### GILIA CALIFORNICA

Among the beautiful wild flowers we have seen this spring is the exquisite Gilia Californica, or so-called prickly phlox on account of its thorny foliage and its blossoms resembling the phlox of our gardens. Its beauty is in its exquisite shades of pink and sometimes lavender, with a white tubular eye.

We saw it growing in masses in the wild pass of Las Casitas, above Santa Barbara, and among the picturesque yellow crags of the Santa Susana Pass.

In Las Casitas Pass we also saw the red blossoms of the fuchsia—flowering gooseberry dropping like bright jewels from its lustrous dark green foliage. While the flowering pink currant had assumed the exquisite blooms of our arbutus. Here also were the pretty baby-blue eyes of Nemophila insignia.

Driving on through the picturesque beauty of Boquet Canyon we came to young apple orchards not yet in blossom, and saw the almond, prune and apricots in bloom. These, with the fresh green leaves of the willows, announced that spring was here.

Beside the road an owl fluttered up, an eagle watched us from his pinnacle, we heard the songs of the meadow larks and a flock of wild geese flew by.

M. R. CASE.

**Say It With Flour**

It is evident that the slogan of the florists, "Say it with flowers," has become thoroughly fixed in the mind of the public. This fact is shown by the numerous ways in which it is being used by other organizations with slight changes. The most unique example is shown by the plan which the men in charge of the Chinese relief fund have adopted. In banks and stores everywhere they have put up large cards having slots for coins of various sizes up to a dollar. At the top of the card in large letters appear the words,

SAY IT WITH FLOUR.

The meaning is, of course, that by the contributions received it will be possible to supply flour, or, in other words, bread, for the starving millions of the East. The florists are not going to suffer any by this adaptation of their slogan. Indeed, it should prove of direct benefit for almost everybody will see the connection.

---

**Flower Shows**

New York's flower show was an unqualified success. Everybody admits that to be a fact. The rose show to be held in Boston promises to be equally successful, and if the plans for the great show in Cleveland next year materialize along the lines mapped out that show will be the greatest event of the kind ever held on this continent. American exhibitors and show managers have learned a lot in the past few years. Among other things they have taken a leaf from the experience book of their English cousins and learned how to do their judging quickly and systematically, so that the awards can be made early in the show. This is a long step forward. Also they have learned the value of backgrounds and accessories in the composition of a picture which shall make an immediate and powerful appeal to the eye of the visitor. Without question the shows of the present day are being put up in much better form than ever before.

---

**Crusoe and Advertising**

One of the most persistent advertisers in the history of success was Robinson Crusoe.

He knew what he wanted—a ship—and he put up an ad for one.

He hung a shirt on a pole at the top of his island; that, in the language of the sea, was plain to every seafaring man.

The circulation was small, there was no other medium, but Crusoe kept at it, despite the fact that he got no inquiries for a long time.

In the end he got what he wanted, was happy, and his name and fame have come down through the ages!

Suppose Robinson Crusoe had taken down his signal after a year and declared: "Advertising doesn't pay?" Where would he and his story be now?

Or suppose something had whispered in his ear: "No use, Robinson—these are pretty hard times. Nobody is buying or sailing any ships while money's so tight. Better cut out your advertising until times get good again?"

Adverise now and next month, and next year. Put up your signal and keep it there.

---

**An Early Spring**

This is one of the earliest seasons on record, at least in the blooming of shrubs. At the date this is being written the peach known as Prunus davidi is in full flower in the Arnold Arboretum. Cornus mas is a sheet of yellow, and the magnolias are showing color. Other plants are equally far advanced,—much too far advanced for safety, indeed, for if a hard frost comes no little damage will be done. Perhaps, though, this is going to prove an unusual season, without any more cold weather.

Reports from Washington show that the magnolias are in full bloom there, and if the weather man is considerate enough there will be a big show of these flowers all over the country. At a recent meeting in Boston Pres. Burrage, of the Horticultural Society, lamented the disappearance of Magnolia glauca from the North Shore, where it once grew in great abundance. It is surprising that nurserymen do not feature this magnolia to a greater extent, for it is one of the best that can be planted. Magnolias are very useful shrubs for garden purposes, and in some places for street planting. The avenue of Chinese magnolias in Rochester is famous the world over, and the display when the trees are in bloom is worth going far to see.

---

Keep your face toward the sunshine and the shadows will fall behind you.

---

Advertising supplies the combination to the safe containing the secrets to success.

# BURPEE'S DAHLIAS

## *Jean Kerr*

### *Burpee's Sensational Decorative Dahlia*

The most valuable of all white decorative dahlias. Let the weather be as it may, and no other dahlia blooming, JEAN KERR will be a mass of flowers. It is one of the first to flower and blooms continuously until killed by frost. In type it is a short-petaled decorative, and by some classed as a show or ball dahlia. It is an outstanding variety because it never fails to flower freely. The pure white blooms are carried gracefully on long and strong stems. The illustration, reproduced from a Fordhook photograph, shows the compact growth and free-flowering habit. JEAN KERR is a foremost variety for cut flowers and equally as important for garden use.

JEAN KERR was awarded a Certificate of Merit by the American Dahlia Society when first exhibited in September, 1916. After it was tested in the trial grounds of the American Dahlia Society it received a second Certificate of Merit on September 24, 1920.

**Strong roots, 75c each; 3 for $2.00; 12 for $7.00**

**W. Atlee Burpee Co.**
**Seed Growers Philadelphia**

A row of JEAN KERR in Burpee's Trial Ground on Fordhook Farms. First dahlia to bloom, flowering until killed by frost.

## REMARKABLE ROSE LIBRARY

### That of Thomas N. Cook one of the Largest in the Country

One of the finest collections of literature on roses in the United States is that owned by Thomas N. Cook of Watertown, Mass., a student of the history of rose cultivation. Mr. Cook is planning an interesting conference with professional and amateur rose growers from all parts of the country, during the show of the American Rose Society in Horticultural Hall on April 6-10.

Practically every publication on roses for more than a century and a quarter is to be found in Mr. Cook's library, and only the absence of one or two works by old Greek authorities prevents it from being complete.

Mr. Cook has had unusual facilities for securing books on roses, for early training in the paper business brought him in close touch with book collectors, and they soon learned that he was in the market for anything having to do with roses.

Not long ago he went over the library of the Department of Agriculture at Washington and, in comparing the list of works on roses prepared by Charles F. E. Gersdorff of the department, he found that he could duplicate every volume in the library, and owned many volumes which the Government has been unable to obtain.

In 1914 Mr. Cook purchased the rose library of Lord Carmichael of England, containing more than two score of very rare "Rosicania," and several volumes which were the only ones in existence. The Carmichael library included works in English, French, German, Italian, Spanish and Hungarian, the oldest book being dated 1797. In addition, there were all the books on roses published by English and French authorities for more than fifty years. Some of the Carmichael books contain traces of snuff which old collectors used to preserve the paper from decay, while many of them are elaborately bound in rose leather, richly tooled.

Some twenty years ago, Mr. Cook secured a copy of Die Rosen, a German work of Roessig, and soon found that there was only one other in the world. Another of his rare books is his "Roses" by Rig Danties, said to be one of the greatest authorities on roses, but whose remarkable work has also vanished with the exception of the copy in the Cook collection.

## NEWS NOTES

The Southern Pines Floral Co. is a new concern at Southern Pines, N. C. It is understood that new greenhouses will be built, one of them 150 x25 feet. The firm includes H. F. Kelley and H. C. Kenneiley, the latter having gone to North Carolina from Massachusetts six or seven years ago.

The Doswell Floral Co. has opened a landscape department in connection with its greenhouse and florist's shop at Fort Wayne, Ind.

# BREEDING CARNATIONS

By C. H. CONNORS
New Jersey Experiment Station

NUMBER 2

How The Flowers Are Prepared

The first procedure is to emasculate blossoms on the female parent. The best time to perform the operation is just before the petals begin to spread. With the scissors, you next cut away the calyx and corolla (the petals) and all of the stamens. It is very important that the anthers or upper parts of the stamens be entirely removed from the flower. When this is done, cover the bloom with a paper bag (¼ pound is large enough) and fasten at the bottom with a wired plant label. This will prevent the accidental pollinization by visiting insects. It is well, also, to cover a blossom on the male parent to prevent contamination of the pollen by insects. One blossom ought to furnish sufficient pollen to care for 8 or 10 crosses. If it is desired to find out what characters the parents carry and may transmit to the progeny, they can be self-pollinated. That is done by simply covering the flower, making sure that the stigma has been pollinated when it has become receptive. It is well, however, to remove the petals, as mould will sometimes form, causing a loss of the seed.

The flowers are left in this condition until the stigma becomes receptive, which will be in 10 to 14 days, if done at the stage described above. This condition of the stigma can be ascertained by examining it under the glass. If it has become "hairy" and drops of sticky fluid are on the hairs, the stigma is receptive. It may then be pollinated. Uncover the male parent and select a stamen that has broken open (or dehisced), evidenced by its appearing powdery. This can be taken in the forceps and the powdery part gently applied to the stigma, where the powder will adhere. Only one grain of pollen is necessary to impregnate the seeds, provided germination takes place, but it is desirable to cover well the stigma with pollen. The sticky fluid is the germinating medium. In it the pollen grain germinates and throws out a tube which enters at one of the hairs and so on down to the ovary, where it impregnates the ovules, which thereupon become seeds. When the application of the pollination has been accomplished cover again, fasten with the label on which has been written what the cross is and the date made. In designating the cross, put the name of the female parent first. For example, if Matchless has been crossed by Crystal, label "Matchless X Crystal." Where the bloom has been self pollinated, label "Matchless S. P.," with the date.

As many crosses may be made as there are blossoms, or as is desirable. the greater the number of seedlings, the more likelihood of attaining the ideal.

The pollinated flower is left on the plant until the capsule is fairly well dried, which will be a matter of 3 to 6 weeks, then removed from the plant and dried off on the stem for two or three weeks longer, after which the seeds may be sown at once, if desired. The number of seeds in a capsule varies from four or five to sometimes as many as 30 or more.

### Seasons of Crossing

It has been found by experiment that there are two seasons during which crossing is most successful. The first extends from September up to the middle of December and the second from about the first of April up to the middle of June. During the first period, careful work should give from 80 to 100 per cent success, and the second period will give about 75% success. During the intervening period, only 10-25% of the crosses are usually successful. A great advantage in working during the earliest period (September to December) is that the seed may be sown in the late winter or early spring and the plants will often flower out-of-doors during the summer, so that some culling may be done before the plants are moved into the house. Crosses made during the late period are late in ripening seeds, so that the plants will be moved into the bench from the flats or pots in which they are grown.

## George Watson's Corner

"You in your small corner and me in mine."

To be the son of a wonderful father is an awful handicap to a boy. The boy gets no credit. They all say, oh, well, his daddy made the business. All one has to do now that the wagon is at the top of the hill is to keep it going. Anybody can do that. But there are exceptions. And when we note one, it is up to all of us to take our hats off to him. The particular instance we have in mind is Wally Pierson of Cromwell. He has really shown that he is as good as his distinguished daddy, and in many ways has even gone him a few better. This bouquet is not for the son, but for the quiet gratification of the old boy, as he sips his cup of tea in his easy chair of a quiet evening, resting supposedly from the strenuosity of a strenuous but well-spent and happy activity—inspired by the blood of his Flemish ancestors who braved the seas and made the glorious British Empire and United States of America, of which we are all so proud in this year of 1921 A. D.

And while we are talking of old man Pierson we think of another wonderful character—old man Pennock. Abram L. Pennock was a wonderful man himself, and did many wonderful things, of which we have talked time and again these last thirty years. He is in the empyrean now, but his memory still remains with us fresh and fragrant. But it was not only what he did himself that was the most wonderful. It was his genius for starting other people to do things. He was all the time starting something. A new store, a new settlement, a new way of doing things; new men, new methods; he was never still, and the remarkable thing about it all was that he picked out the right men every time, and they all made good and became men of means and to be like their preceptor. All the Clan Pennock—scattered everywhere from Maine to California—also the Westcotts, the Cartledges, and all the rest of them, are a standing monument to themselves and to a man of splendid personality and initiative. One of his sons, Samuel S., has, like Wally Pierson, probably done more than all the rest to spread the fame of the family genius to the far winds. Samuel has in high degree his father's genius for making friends and starting things. What the philosophers call initiative. Very few of us have that faculty. Abram had it, and Samuel seems to

have inherited it in a high degree. His big wholesale floral emporium from small beginnings is now known the world over. He may have millions but it isn't millions he is after. Like his father, his main idea is to help his fellow men. Public opinion has chosen him for an important mission abroad during the next six months, but his home affairs are in the most competent hands and all will be well. A wonderful man was Abram L. Pennock and he has given us many worthy successors of his name and lineage.

---

Mrs. Samuel L. Pennock, who revealed her high poetic ability to us poor grubs some two years ago with the delightful verses, "King John of Barnegat," has been the indirect means of giving me another treat. This is Christopher Morley's new book, "Travels in Philadelphia," which she was keen enough to pick up and pass on to "her best fellow" as a Christmas present. The best fellow (Samuel L.) enjoyed it so much that he passed it along to yours truly for a read. I enjoyed it so much that I want all my old friends to invest in a copy. It is a book of 264 pages and costs $1.50. Can be secured through Horticulture's book department. The chapters on "Franklin Square," "The Parkway," "Darby Creek," "The Wissahickon Drive," "Fish Town," "Willow Grove," "Neshaminoy Falls" and "Hog Island" are particularly delightful and would especially delight old timers like John Walker of Youngstown, O.; Adam Graham of Cleveland, J. C. Vaughan of Chicago, P. Welch of Boston, and others too numerous to mention. There's a treat in store for you, boys! Come along with that $1.50.

---

The only quotation from the many volumes that John Boyle O'Reilly wrote that appears in the Oxford Book of verse is the following:—

"The red rose whispers of passion,
And the white rose breathes of love;
O, the red rose is a falcon,
And the white rose is a dove.

"But I send you a cream white rosebud
With a flush on its petal tips;
For the love that is purest and sweetest
Has a kiss of desire on the lips."

There is not so much to them at first reading but there is a fine swing to them and they grow on you as you keep repeating. And that reminds us that the second verse is particularly appropriate to that great new cre-

## WESTCHESTER AND FAIRFIELD HORTICULTURAL SOCIETY

The Westchester & Fairfield (Conn.) Horticulfural Society met in Hubbards Hall on Friday, March 11th. There were 80 members present when President Jones opened the meeting.

Secretary Addor gave special prizes for roses, carnations and pot plants. He also favored us with a spirited address on "The Responsibilities and Opportunities of the Gardener." Mr. Addor contends that as we are Nature Architects we should take much more interest in the beautifying of the surroundings about the towns or localities in which we live and also advising the small home owner.

Quite a discussion followed this address, many thinking it a progressive policy, others thinking it was not our business at all.

Mr. Henry Wild favored us with a short talk on his recent trip to England. Things are improving rapidly over there since the War has ceased and Horticultural interests are getting back into their pre-war state.

Mr. Lenine was presented with a handsome piece of silver, he having obtained the highest number of points throughout the past year for vegetables.

## NATIONAL FLOWER GROWERS' ASSOCIATION

President W. J. Keimel, of the National Flower Growers' Association, has appointed the following standing committees: Production—Messrs. E. Allen Pierce, Carl Hagenburger and W. J. Pilcher. Marketing—Messrs. Jos. Kohout, Carl Hagenburger and Earle Mann. Credits and Collections—Messrs. Thos. Roland, Earle Mann and J. S. Wilson. Legislation—Messrs. Earle Mann, Thos. Roland and W. J. Pilcher.

---

At the recent meeting of the Illinois State Florists' Association in Urbana, President J. F. Ammann, of the Association, presented its objects and aims in a clear and concise manner. He said among other things:

"The objects of our Association are just as the Constitution provides, the advancement of commercial floriculture under glass, devising ways and means for the best and most economical way of—and these are the aims—

"First, Production: To combat insects and diseases, studying elements entering into production such as soil analysis, commercial fertilizers, temperatures, methods and cost of construction of greenhouses, growing location with reference to marketing and disseminating knowledge among members on various subjects of interest to them.

"Second: Marketing: Sales methods, methods of grading, storing, packing and delivery. To devise ways and means of bettering selling conditions and eliminating the present cause of waste in marketing plants and flowers. To raise the standard of industry by national advertising.

"Third: Credits and Collections.

"Fourth: Legislation: To keep generally informed on legislation proposed affecting members of this association in either state or national legislation.

"We have provided in our By-Laws for four classes of membership. Class A are growers who belong to an Allied Trade Association, carrying on co-operative advertising on the percentage plan, where 25% of their entire collections are turned over to this organization for national advertising, these growers by virtue of such payments automatically become members of this Association. Ninety per cent of such funds are set aside for national advertising.

"Class B are growers who are members of some district growers' organization and they become members of this Association by their district paying the sum of 50c per 1,000 sq. ft. of

### HORTICULTURAL BOOKS

EVERY GLADIOLUS GROWER, SEEDSMAN, NURSERYMAN or FLORIST who has but limited space at hand for growing purposes and wishes to realize the HIGHEST POSSIBLE YIELD in FLOWERS, BULBS and DOLLARS per SQUARE FOOT should have a copy of my new book, "THE GLADIOLUS FOR PROFIT." Every detail connected with the outdoor growing of these bulbs for the GREATEST PROFIT is given. Illustrated with twelve halftones from actual photographs showing my intensive system of culture that BRINGS THE PROFIT. A special chapter on DAHLIAS showing the PROFIT WAY to grow these for cut flowers and bulbs and, most important of all, WHAT VARIETIES to grow in the MIDDLE WEST in order to get a crop and the money EVERY YEAR. The merits of ONE HUNDRED and THIRTY varieties of Gladioli are cussed and discussed and the MONEY MAKERS POINTED OUT. There is good money growing the Gladiolus if you START RIGHT, and this book will START YOU RIGHT. Satisfaction or your money back. Mailed postpaid anywhere upon receipt of $1.00. R. M. Champe, Oakland Gardens Nursery, Walled Lake, Mich. Address all letters until April 15, next, to me at my southern plant farm, Box 412, St. Petersburg, Fla.

### PETUNIAS

PETUNIAS.

Diener's Ruffled Monsters, single. The largest and most beautiful ruffled variety of Petunias in existence. Ruffled Monster seed in separate colors, pink, red, variegated, white, red with black center, pale lilac, and all colors mixed.

The following somewhat smaller than the Ruffled Monsters; Pearl of Kentfield, flesh pink frilled, dwarf, purple or blue and white frilled.

Price per package, 50c

Catalogue will be sent free on request. Write for it today.

Mr. W. L. Ferguson, Smiths Falls, Ontario, under date of Dec. 2, 1919, writes us the following in regard to our Petunias:

"Last year I purchased Petunia seed from you. I think every seed germinated and the blooms were the finest ever seen in this part of Canada. Only about 8 per cent of the plants could be classed as common. I want more of the same quality each year."

Mr. Rudolph Nagel, Lancaster, Pa., under date of Dec. 14, 1919, writes us:

"I had, last year, just a few of your Petunias, but I am sure I could have sold thousands of them. They surely came up to your claim and way ahead of my expectation."

### THOMAS J. GALVIN MAKES A CHANGE.

The trade throughout the country will be interested in the announcement just made that Thos. J. Galvin has severed all connection with Thos. J. Galvin, Inc., and entered business

Thomas J. Galvin

with his son, Thos. J. Galvin, Jr., in Winthrop Square, Boston. Mr. Galvin, Sr., is one of the best known florists in the country, having been in business for 47 years. His son has already developed a large retail trade, and it is expected that the new firm will greatly extend its operations, although it will still be conducted under the name of Thos. J. Galvin, Jr.

### GOLD MEDAL FOR GODDARD.

At the Rose Show, Wednesday, S. J. Goddard was awarded a gold medal for an exhibition vase of "Laddie." This is the first time that a gold medal has ever been awarded a carnation by the Massachusetts Horticultural Society, and Mr. Goddard received many congratulations.

### LECTURES AT THE ROSE SHOW.

It is evident that the public feels a keen interest in all the details of rose culture, for Pres. Pyle, of the National Association, was greeted with a large audience at the opening lecture in Horticultural Hall Wednesday afternoon. Mr. Pyle showed many very beautiful slides and gave much useful information on rose growing.

The other lecturers announced for the week were as follows: Charles H. Totty, J. Horace McFarland, W. N. Craig, and Prof. Waugh of Amherst College.

# -HORTICULTURE-

Entered as second-class matter December 8, 1904, at the Post Office at Boston, Mass., under the Act of Congress of March 3, 1897.

Vol. XXXIII APRIL 10, 1921 No. 7

## THE TALK OF THE TRADE

Of all the roses introduced in the past few years, and there have been several which have made strong friends, Mme. Butterfly can safely be classed among the best. It is worth noticing that the various commercial men mentioning the leading commercial varieties in the 1921 Rose Annual have practically all spoken strongly in favor of Mme. Butterfly. There seems to be very little room for a difference of opinion on this variety, and I have noticed that rose growers in all sections of the country are very favorably inclined to this sort, and it seems safe to say now that it is only a question of time when Ophelia will be eliminated entirely. Mme. Butterfly is more vigorous in growth, is said to be a better producer, and of course we know that its color is a decided improvement over Ophelia.

As I said in a previous number, the vases of Mme. Butterfly shown at the New York Show were wonderful in every way. I had no idea that an Ophelia could be done so well.

With coal prices where they are now, every grower is interested in any way which makes it possible for him to cut down on his coal bill. And that is also the reason why so many growers are becoming interested in the heating plant at the Arnold Fisher Greenhouse in Woburn, Mass. Mr. Fisher has installed what is called the J. R. Smith Burner, and is getting excellent results. This system is very simple. It consists of a Sturtevant Blower, and the patent burner which in a crude way of explaining is not a grate at all, but an arrangement whereby the air is blown in from the ash pit and directly through the coal.

Breck-Robinson Garden at the Boston Flower Show

No ashes go down into the ash pit, but all of the ash that is not consumed is cleaned out through the fire box, cleaning being necessary only once a day on an average. It would be only under extreme conditions that it would be necessary to clean twice in one day. As I saw this boiler plant in operation, I was impressed with the very small amount of ash that was taken from the fire, and of course the most important thing was the fact that coal of the very poorest quality could be used. Mr. Fisher showed me this plan in operation, and gave it a test by using screenings only. No soft coal was used, and the screenings he was using were not what I would call a very good grade.

There are several points that I call mighty important, the first of which comes to my mind is that steam may be shut off at any minute that it is necessary, and if the weather changes, the sun is clouded over, or for any reason steam is needed quickly, in a mighty few minutes the pipes are full of steam again, and we all know that is mighty important to the greenhouse man. While the fires are idle during the day, there is not a lot of coal being consumed, as is usual with the ordinary way of banking your fire. And as I said before, when you are ready for steam, you can have it in a very few minutes. A pressure valve has been installed on this particular plant, and it is very necessary in order to get the best of service.

We all know that during any time when it is hard to get coal, whether it be on account of extreme weather such as blizzards, or whether it be on account of strikes, that it is not particularly hard to get screenings. Even when all the coal men were hollering about the coal shortage, it was generally a fact that they would tell you you could have a car of screenings if you could use it. I have heard it said many a time that when screenings got up to $3.00, $4.00 or $5.00 a ton they ceased to be economical, and under the old way of burning them I think that this was pretty apt to be true. But with this way of burning screenings, Mr. Fisher is getting a wonderful fire, and he is getting better service from his boilers with this apparatus and clear screenings than he could get before with good soft coal.

It is hard to believe the many good things that are said about the J. R. Smith Burner, but I believe that a grower will be agreeably surprised if he will take the time to investigate and see how well it works out.

# NATIONAL ROSE SHOW

## Exhibition in Boston a Great Success — Orchids, Carnations and Many Other Flowers Also Shown

The National Rose Show at Horticultural Hall, Boston, is in full swing as we go to press. There is no doubt of its success. While the audience was not as large on the opening afternoon as a year ago, when the Orchid Show was held, it increased rapidly in the evening, when the halls were crowded with enthusiastic sightseers. It was the kind of show that advertises itself.

While roses were the predominating feature, many other flowers were shown, the orchid exhibits in the lecture hall being of particular note. The remarkably good carnations interested the commercial growers attending the show, and one of the prettiest groups ever staged in the hall was made up largely of Kurume azaleas from the estate of John S. Ames at North Easton, Mass.

The principal features in the main hall were two rose gardens, one entered by Thomas Roland, of Nahant, president of the S. A. F., and the other by the Breck-Robinson Co., of Lexington, Mass. The latter garden, which was not in competition, occupied the center of the hall, with the Roland garden being surrounded by a substantial fence. A great variety of roses was included in the planting list, among them some of the more modern kinds, like Los Angeles.

The Breck-Robinson exhibit, which was given a gold medal, consisted of a miniature rose garden, planted largely to Baby Ramblers. The garden was surrounded by a wall with arbors, and had a small seat at one end. In the center was a dainty fountain. The garden was laid out under the skillful management of Mrs. Babcock, in charge of the landscape department of the Breck-Robinson Co. The two largest displays of orchids were made by Mr. A. C. Burrage and Julius Roehrs Co., both being remarkably complete and well finished. A huge basket design, made of orchids and displayed by the Julius Roehrs Co., was given a gold medal as the most original display.

J. L. Butterworth, the veteran orchid grower of Framingham, had two exhibits which won him two gold medals. Mr. A. N. Cooley, of Pittsfield, Oliver Line gardener, had an exhibit which made a strong appeal to orchid enthusiasts because of the high quality of the flowers shown. In his exhibit were 75 varieties.

In the carnation room were to be found many of the newer varieties, including Donald, Rosalia and Grace Coolidge, the latter recently named by William Sim in honor of the vice-president's wife. The Sim exhibit, staged by Sidney Hoffman, was especially attractive, not only for the variety of the carnations shown, but also for the quality. Samuel Goddard had a vase of Laddie which excited much admiration, the flowers being finished to perfection. It won a gold medal.

In this room Wollrath & Son, of Waltham, Mass., had an exhibit of the so-called Australian or African violet, Saintpaulia ionantha grandiflora, which was much commented on. It would seem as though this plant might be grown more widely and make a good sale. In this room was also a

**Announcement**

On and after April 2nd I will be associated with my son, Thos. F. Galvin, Jr., in the florist business at 226 Devonshire St., near the corner of Franklin St., where we will cater to the retail trade.

Due to changed conditions in the florist business during the past year, I have decided I can serve my many customers to better advantage from this central location, in the heart of the wholesale flower district, which enables me at all times to obtain the pick of the market, and to sell the choicest flowers at a distinct reduction.

I offer my advice and forty years of experience as to proper selection and arrangement of flowers for any event.

THOMAS F. GALVIN.

well flowered plant of Rosa Hugonis, sent in by Walter Hunnewell. An exhibit in the big hall which attracted much attention included a number of rhododendrons, and an immense plant of Azalea schlippenbachi from the Thomas E. Proctor estate at Topsfield, Mass.

The Ames exhibit of Kurume azaleas was staged by R. & J. Farquhar in a most attractive manner. It was backed by tall evergreen trees, and in the center was a fountain. These Kurume azaleas were imported by Mr. Ames a year or two before those shown by the Arnold Arboretum last spring. The Farquhar Co. had in the entrance hall an interesting exhibit of hardy primroses.

From the Webster estate came a collection of well grown Hydrangeas, and the stage in the lecture hall was banked with a new race of azaleas from Holmlea, the estate of Prof. C. S. Sargent, director of the Arnold Arboretum. These azaleas have been named R. sanderi.

The entrance to the lecture hall was made very inviting by a pergola covered with climbing roses, a part of the fine exhibit of W. W. Edgar Co., of Waltham. In the main hall were other rose covered arches from the same company.

Any Other Plant in Flower Not mentioned in this list: 1st, Mrs. N. M. Bryant, Calceolaria; 2d, Miss Cornelia Warren, Chorizema.

## REORGANIZE CHILDS' FLORIST BUSINESS

The large florist and seed business of John Lewis Childs, Incorporated, of which Mr. Childs was the active head until his death three weeks ago, has been reorganized. The new president is Mrs. Caroline Childs; vice president and general manager, Arthur H. Goldsmith; secretary-treasurer, Jay Lionel Childs. All three of the sons are now in the business and taking an active part.

The oldest son, Vernon, has charge of the packing department and rentals of outside properties. Mr. Childs owned two apartment houses, both of which have a waiting list. Mr. Goldsmith, the present general manager, is a brother of Mrs. Childs and was formerly manager under Mr. Childs, but left several years ago to go into the real estate business. Henry H. Davies, who has been general man-

# Four Great American Hybrid-Tea Bedding Roses

ALL ARE OFFERED IN STRONG TWO-YEAR-OLD PLANTS.

**Mrs. S. K. Rindge**
(Howard & Smith, 1920).

This is, undoubtedly, the finest yellow Rose we have. While it in some stages of development, as well as in growth, resembles Golden Emblem, it is a stronger grower, and its rich chrome-yellow flowers as they mature, become suffused with salmon-pink.

Strong, two-year-old California-grown plants $1.50 each.

**Miss Lolita Armour**
(Howard & Smith, 1920).

The unique coloring of this novelty is a combination of colors difficult to describe, and it is absolutely distinct from all other varieties. The flowers are of large size, full double, with petals of great substance. As the flowers expand they develop to a deep coral-red with a golden, copper-red suffusion. The base of the petals is of a rich golden-yellow with coppery-red sheen, deliciously fragrant. The plant is a strong, vigorous grower and very free-flowering. A Rose for which we predict great popularity.

Strong, two-year-old, California-grown plants $1.50 each.

**Rose Marie**
(Dorner, 1918).

A most pleasing shade of clear rose-pink, with ideal long shapely buds which open to very large flowers of good form. The plant is a strong, vigorous, healthy grower, and remarkably prolific. We consider it the best bedding Rose of its color yet introduced. $1.50 each.

**William F. Dreer**
(Howard & Smith, 1920).

A beautiful Rose of the same parentage as Los Angeles and which, for delicacy of coloring, is incomparable with any other variety. It is, in fact, one of the delicate tints of buff, suggestive of the lilies. The flowers, which are similar in shape to Los Angeles, and like that variety, beautiful in all stages of development, are at their best when in half-expanded flower. These, in expanding, are of a delicate silvery-shell-pink. The base of the petals are of a rich golden-yellow which, at certain stages of development, gives a golden suffusion to the entire flower, this golden suffusion being particularly brilliant early and late in the season.

Strong, two-year-old, California-grown plants $1.50 each.

NEW AMERICAN HYBRID TEA ROSE WILLIAM F. DREER

**Gorgeous New Climbing Rose, Paul's Scarlet Climber**

This is without question the most important addition to our list of Climbing Roses in many years, and no other Rose in any class can compare with it for brilliancy of color, which is a rich scarlet that is but little affected by sun or bleaching and the petals fall cleanly. The flowers are of medium size, semi-double, borne in large trusses of from three to six flowers each on much branched canes, the plants being literally covered with flowers from top to bottom. It is of strong climbing habit and perfectly hardy. This Rose has been highly recommended by the leading rose growers of the press. It was awarded a Gold Medal by the National Rose Society for an award of Merit by the National Rose Society of England, and was also awarded during the season of 1918 the coveted Gold Medal at the Bagatelle Gardens, Paris. Strong two-year-old plants, $1.50 each.

## HENRY A. DREER, 714-16 Chestnut St., Philadelphia, Pa.

**The above prices are intended for the trade only.**

ager for the past eight years, resigned soon after Mr. Childs' death.

### BUSINESS METHODS OF FLORISTS

The National Flower Growers' Association is endeavoring to compile data with a view of getting valuable information disseminated among the flower growers of this country pertaining to insurance protection, a simplified and uniform bookkeeping system, including ways to figure cost of production, depreciation, etc. Any answers to the following inquiries mailed to the undersigned will be appreciated by those in charge of this work and materially assist in getting some definite results.

No. 1. Do you carry insurance, and, if so, what kind? Name the companies and rates paid.

No. 2. Explain in brief outline your system of bookkeeping and how you figure costs of production, and depreciation.

No. 3. Please give such other information that in your opinion would assist materially in the above work.

J. F. AMMANN, Secretary.

### LUNCHEON FOR EXHIBITORS.

On the opening day of the Rose Show in Boston, Wednesday, Pres. A. C. Burrage, of the Horticultural Society, gave a luncheon to exhibitors and invited guests, on the upper floor of the building. This was a very pleasant function, bringing together many old friends. Among the out-of-town guests were Pres. Pyle and Secy. Wister, of the Rose Society, C. S. Strout, of Biddeford, Me.; Wm. Manda, of West Orange, N. J.; Charles H. Totty, of Madison, N. J.; Edward Roehrs of Rutherford, N. J., and Miss Eileen Low, of England. Miss Low, who is famous as an orchid expert, was one of the judges who afterwards passed on the exhibits in the lower hall. Miss Low expressed herself as much pleased with the interest in orchid culture which she found in this country, and the high quality of the flowers shown.

### ROSES OF THE DAY

#### Mr. S. S. Pennock Considers Them From A Wholesaler's Viewpoint

Mr. S. S. Pennock of Philadelphia contributes a very interesting article to the Rose Annual for 1921 on "Commercial Roses as the Wholesaler Sees Them." He says in part:

"Killarney, a European introduction of several years ago, was so much easier to grow and bloomed so much freer, that before the growers realized it they were overdoing it. A store man would buy mostly Killarney, pink and white, as there was very little else to buy. Some markets, of course, had more variety than others. One year in particular the Philadelphia market was especially overworked with Killarneys.

"This is a situation that the growers today need to guard against with Columbia and Premier. If a customer comes into a retail store and finds just two or three varieties of roses, there is certainly not the encouragement to purchase that would exist if there were a larger variety to choose from.

"Both Columbia and Premier are fine roses. There's no question about it, wonderful flowers, with fine foliage, good growers; roses that give splendid satisfaction. Columbia, for the year round, is probably the better of the two; but Premier, during the midwinter months, forges ahead with its wonderful foliage and large, well-shaped buds.

"We have Pilgrim, which, when it first came on the market last summer, was not received with quite the favor that was hoped. However, as the season progressed and the weather became cooler, it became more of a favorite until, at this writing, the first of March, it is one of our best roses. I believe it is a splendid rose for about nine months of the year, but not a particularly good hot-weather rose, although the growers may be able to so grow it during the hotter part of the year that it will do better. It is a good keeper, holds its head up, and has a very attractive color. The two-tone color gives it a class by itself.

"American Legion, which is to be called 'Legion' because of a silly objection by the organization of that name, is coming out this year, and seems like a very attractive rose; but every new rose has to be tried out before it can be determined whether it will be a success. I like it very much; whether from a grower's standpoint it will equal or be better than our present roses will have to be determined.

"Dunlop, here in the East, has not proven the success it was hoped. It seems to be better in warm than in cool weather.

"It was thought Crusader would supersede Hadley, but it has neither the color nor the holding qualities of Hadley, although it is a larger rose, and I understand is a better and easier grower. It will turn dark after it is cut a day or two, which is enough to condemn it among retailers. It may be that this could be improved upon by the grower, as some roses have been in the past. Meteor, for instance, was found to be a success in a warmer temperature.

"Hoosier Beauty is still grown by some, but not nearly as much as in the past. Some growers call it a money-maker.

"Milady is and has been grown more extensively in the West than in the East. While it is not a recent introduction, some of the eastern growers are taking it up again, and it looks as if it was coming back. From the standpoint of a producer, there is nothing in the red rose line to touch it.

"Russell is still a favorite, and I see no decrease in the plantings of those who do it well. In fact, most of the eastern successful Russell growers are increasing rather than decreasing. This, for an all-year round rose, is the best in its class today, a good summer rose, a good winter rose and a good fall and spring rose, although most growers claim it does not bloom well in winter.

"Francis Scott Key is a wonderful fine warm-weather rose, in a class by itself. It has large, fine flowers on good stems, but goes absolutely to sleep during the winter time, and a great many growers on that account feel it is unprofitable. I am sorry not to see it grown more extensively. In the fall some wonderful flowers are produced.

"Mrs. George Shawyer is now very little grown, and apparently will be

**POTATOES AND RARE SEEDS**

# STILL ON TOP

*Our Orchid Exhibition Won 3 FIRSTS*
*at the New York Show*
*and*
*TWO FIRSTS and SILVER MEDAL in Boston*

*IF IT IS QUALITY WHICH APPEALS TO YOU WE HAVE THE STOCK YOU WANT*

**JULIUS ROEHRS CO.**
RUTHERFORD, N. J.

soon a rose of the past. Sorry; it has many good points.

"My Maryland is still favored by a number of growers, and very successfully by those who go into it whole-heartedly and use it as a bread-and-butter rose the year round. It has its place.

"Richmond is grown by very few and more as a Christmas cropper than anything else.

"Sunburst we are sorry to see almost out of the market. A new yellow rose is needed very badly, for we today do not have a good yellow variety that is grown extensively. Neither Ophelia nor Butterfly fill the place for a yellow. Let us hope that some of our enthusiasts in rose-breeding will come along with a good commercial yellow rose; something on the Sunburst color and shape of bud, with Pilgrim stem.

"It is regrettable to notice the tendency to drop Ophelia. It is a splendid rose, and one that I should be very sorry to see the growers discard. Some say Butterfly will replace it, but it seems to me there is room for both roses. Butterfly is so distinct from Ophelia that they could be sold by any up-to-date retail store without one interfering with the other.

"Mrs. Aaron Ward also seems to be passing. It was a great favorite, a beautiful little rose, which probably made as much of a sensation when it first was put on the market as any rose we have ever had.

"The only good, first-class white rose we have available today, commercially, is double White Killarney. It is still holding its own, although Angelus may supersede it. I do not know much of Angelus, only having seen it on exhibition way, when it certainly impressed all present. The old few petaled white is not nearly as satisfactory from a dealer's standpoint as the double roses. It is not as good in the wintertime, nor in the summertime, in fact, it is not as good any time of the year.

"Among the little or 'debuatnte' roses, Cecile Brunner and Old Gold still hold their own. A number of other small roses have been tried, but, after the first year or two, are discarded, and I believe very few outside of these two are grown successfully.

"Last, but not the least, we come to American Beauty, which has been on the market now for about thirty years, and today stands by itself. It is noted with great regret that so many of the growers are dropping it, or decreasing the space devoted to it. It is still a wonderful rose if well grown. What can you get that will give the effect of a dozen fine, long-stemmed American Beauties? Twenty-five or fifty of any other rose would hardly make as good a showing. Unless it continues to bring a good price, it will not be grown by anyone in a few years, which will be a great pity."

The florist business of the late Harry N. Kelley, of Pemberton Square, Boston, is now being carried on by Mr. Kelley's widow, who was experienced in floral designing before her marriage, and who seems entirely capable of maintaining the Kelley establishment on its well known basis of efficiency.

Herbert Shaw, aged 55, for fifteen years superintendent of the Lane estate at Manchester, Mass., passed away recently. He was a member of the North Shore Horticultural Society.

A news report says that the Florists' group of Springfield, Mass., Chamber of Commerce, is endeavoring to secure legislation to eliminate the curbstone florists. It is charged that these curbstone dealers buy over supplies of certain flowers in Boston at a greatly reduced price, freshen them and undersell them in Springfield. Action of a similar kind is being discussed in other cities.

# RAMBLING OBSERVATIONS OF A ROVING GARDENER

Rose growers the country over will be interested in the arrangement decided upon for the dissemination of the Van Fleet roses at the last meeting of the executive committee of the American Rose Society. It was decided that the society should distribute propagating stock of material of one of the new Van Fleet roses in equal quantities to various firms agreeing to grow them, and that the opportunity be offered to participate in such distribution to members of the society who are rose growers and who issue a retail catalogue. They must agree to conditions as to naming, prices, etc., as arranged with the Department of Agriculture, and agree to offer prominently in their catalogues the new roses in two-year form; also to pay the American Rose Society at the end of one selling year as royalty 25 per cent of the retail price as agreed upon.

The committee on new roses is to arrange with the participating persons or firms for a uniform distribution offering of these Van Fleet products. It is to be hoped that there will be a liberal response from growers. The plan is a new one, but if adopted will do much to make the Van Fleet roses quickly available for private gardens, and it seems quite right that the Rose Society should profit to some extent from the transaction because of the efforts which it is putting forward in behalf of rose growing in America.

---

What would exhibitors at vegetable shows in this country think if the judges should include a chef from one of the leading hotels? Some such plan as that is being put forward in all good faith by certain influential people in England. Of course a long and somewhat heated discussion has resulted. If I am not mistaken, the Royal Horticultural Society itself has voted to invite certain chefs to assist in adjudicating vegetable exhibits. The way in which a majority of the exhibitors regard the proposition is shown by the following protest which appears in the Gardeners' Chronicle.

"Chefs do not cater for the masses, nor have they the necessary technical and practical training to qualify them to act as judges of the raw vegetables the gardener has produced. If they were asked to judge exhibits of cooked vegetables to decide which had received the best culinary attention, all well and good; though even then I am rather inclined to think there would be many others besides chefs who could better decide this—a chef's patrons, for instance—but that they should be asked to judge the garden produce is an absolutely inconceivable thing to me. Where chefs are to act in such a capacity, I for one shall refrain from competing, for I do not purpose having the results I submit pronounced upon by unqualified persons in this way."

---

It seems that this proposed innovation has come about because of numerous complaints to the effect that gardeners were prone to produce vegetables of abnormal size for exhibition purposes, and that such vegetables were not by any means the best for table purposes. Several writers in the horticultural press have discussed this tendency to show enormous, coarse vegetables, like those raised for cattle food.

I am not prepared to say to just what extent this situation is paralleled in this country, but am inclined to think that well informed and sensible judges will necessarily discount

Rose Garden of Miss Sarah B. Fay, Woods Hole, Mass.

**WE NEED ALL OUR LAND FOR IRIS AND PEONIES**

Who will help us clear it by using some of the following-named stock? All good stock but we need the room.

350 Norway Spruce, 2-10 ft.
20 Koster's Blue Spruce, 5-9 ft.
9 Concolor Spruce, 4-6 ft.
12 Cut Leaf Weeping Birch, 15-18 ft.
5 Purple Beech, 10-12 ft.
100 Purple Wistaria
75 White Wistaria
80 Excelsa Climbing Roses xxx
20 Silver Moon C. Roses xxx
10 Yellow Rambler Roses

Symphoricarpus vulgaris and racemosus, Deutzia Pride of Rochester, Hydrangea arborescens and many others.

6000 Berberi thunbergii, 1-yr. seedlings to strong, husky plants 3 ft. and over.

Come and give the above "the once over." It will bear inspection.

**GEO. N. SMITH**
WELLESLEY NURSERIES
Wellesley Hills, 82, Mass.

gross specimens at the exhibitions. There is something, however, to be said upon the subject of size alone. Surely, the ordinary vegetable is not necessarily particularly appetizing because it is small.

Take the humble cabbage as an example. This is generally considered as a second-class vegetable, yet a quickly grown, good-sized cabbage is a fine vegetable food, and infinitely superior in quality and flavor to a small one that is oftentimes of small size owing to slow, stunted growth caused by a check of some sort or other during its career, and which certainly does not improve its value.

So far as turnips are concerned, large size is not necessarily a defect, and I prefer a well and quickly grown specimen of from medium to large size to a small one, for its flavor and texture is far in advance of the other, which is frequently woody and strong to the taste, a result often caused by a bad season, poor culture, and inferior variety.

Modern varieties of vegetables, whilst undoubtedly of larger size, have also gained in increased delicacy of flavor, and this is gain accomplished on the same lines as the improvement that has been attained by stock breeders.

---

Apparently English judges who favor the new plan feel that chefs are necessary to check increase of size in the vegetable exhibits. The question arises, though, whether chefs are likely to bring an unbiased view to bear. It is impossible to standardize appetites and tastes. If vegetables are to be judged by their flavor, moreover, the place for the exhibition would seem to be a dining room or a cafe rather than a horticultural hall.

As someone says, "If this extraordinary scheme is persisted in, the horticultural world will very likely be split into two camps, the pro-chefs and the anti-chefs." Perhaps after a time the judging will be done by chefs alone although we submit that it will be just as acceptable to secure the advice of experienceed epicures, and for that matter, the butlers and serving maids.

We may say off-hand that the plan is too ridiculous for its possible adoption in this country, but who can tell? If it is deemed good for English conditions, no doubt there are plenty of people who would advocate its introduction here.

---

I am much interested in the new dahlia "Coppersmith" being put out by W. Atlee Burpee Co. I believe that it has features which will cause it to be welcomed warmly by many private gardeners.

In this new dahlia we have a variety which, in my opinion, is unsurpassed for cutting or general decorative work. The habit of the plant is perfect, the growth sturdy and upright and only of medium height. It blooms early and continuously, and is most floriferous, the plants being literally smothered with flowers that are borne clear above the foliage on stiff wiry stems. In type it is midway between Peony-flowered and Duplex. The outstanding feature of coppersmith is its glorious autumn color, which may be described as a pleasing shade of light copper or bronze with a glistening-like suffusion of salmon-yellow, the reverse of the petals reddish bronze. For the past three seasons this has been one of the most admired varieties in the dahlia fields, and although brilliant in daytime, its unique color is intensified under artificial light.

ELIZABETH LEIGHTON LEE, Director.

MALUS FLORIBUNDA

# THE FLOWERING CRABS (Maluses)

The Flowering Crabs have few rivals among the gorgeous spring-flowering trees and shrubs. At the Arnold Arboretum one of the important events of the year is the blooming of the Crabs, followed by the showy fruit.

Of easy culture, and planted singly or in masses give remarkable and quick results. While beautiful on the small lawn, Flowering Crabs are used to the greatest advantage on a large scale in woodland and other mass plantings, as are Dogwoods and Hawthorns. No group of plants have greater value than the Maluses for enlivening open forest parks and country roadside; they present striking effects when planted on parking strips of boulevards or wide city streets.

BOXFORD NURSERY, EAST BOXFORD, MASSACHUSETTS, offers eight of the finest varieties. Flowering Crabs are quite scarce and orders should be placed early.

Special Descriptive List and prices on request. Address

*HARLAN P. KELSEY, Owner, Hardy American Plants, Salem, Massachusetts*

# ADVERTISING AND SELLING

## GOOD SALESMANSHIP

### How to Handle Customers so that They Will Come Again

At a recent Canadian Convention Major John Counon of Hamilton, Ont., gave a very helpful talk on the selling of flowers. Among other things he said:

Probably no other salesman requires more tact than the florist. He may have a bashful young man who wishes to send a Valentine to his lady love, and is buying flowers for the first time. The next one to be waited on perhaps has just been bereaved. It requires a kindly tact to handle either of them, and to tell them what they need. To do this, one must love one's business, have a cheerful mind, taste in selecting and arranging flowers, and, above all, as I have already mentioned, tact.

Be careful of your attitude in approaching a customer. There may not be a frown on your face, but there may be one on your mind. It will show in some way, so it is necessary to diligently cultivate a mind that knows no trouble in service—that kindly thoughtfulness that tries to help the customer to get what he wants and in accord with his pocketbook.

When a customer comes into a store it is usually with the idea of buying something, though he may have a hazy idea of what he wants. One must lay one's self out to please and sell him, not necessarily what he may think he wants, but what he needs and is able to utilize. It takes thought on the part of the salesman to realize this and to act accordingly. His doing so will help to build up the business with which he is connected. Do not try to side-step serving a fussy or hard-to-please customer. That usually means that your thinking capacity is not being used as it should or, in other words, that you are indifferent to your own success. Waiting on such a person brings out the best in one, in patience and resourcefulness.

Another thing in which care must be observed, that is, do not over-solicit a customer. Doing so will usually drive him away in a dissatisfied mood, and he is then in the humor to try one of your opposition. His custom may thus be permanently lost to you.

Flowers seem to demand the best from those who sell them and one's dress and appearance has to be in keeping with what he is selling. The ladies should be neatly, but not obtrusively dressed,—that is, not faddy —and the men should be cleanly shaved, and have on clean collars and polished shoes.

Try to cultivate a pleasant tone of voice, that is avoid that loud way of talking which is so prevalent on this continent. This is more important than appears on the surface. One large department store in London, England, places so much value on this that each clerk must take lessons in voice culture. An agreeable voice certainly has an effect on a customer. He may not notice it definitely, but an agreeable impression is nevertheless formed. Watch your telephone voice. I had occasion to call a man the other day, and when he was called to the phone he answered with a sort of quick "Hullo" that was not altogether agreeable. So think of the telephone, as if

## C. R. BURR & CO.

**Manchester -- -- Connecticut**

"We sell to the trade only. We do not sell to planters and gardeners at wholesale prices."

you were going to speak to one of your best friends.

I am a firm believer in having only one price, and in not charging about fifty per cent more to some stranger who looks well-to-do. In the end, one will be better off to have only one price, as one's customers will feel more satisfied to deal with you, when knowing that they are paying just the same price as everyone else.

Bookkeeping is abhorred by most people, unless it can be transferred to someone else's shoulders, that is by employing a bookkeeper either for whole or part time. Many a man would have made a greater success in business if he had kept books. He would have known his position, and would have charged prices that were fair to him. Prices that are not fair to the producer are not fair to the public, for, if he loses, then everyone else loses to some degree, for what affects one, affects all.

Anyone keeping a greenhouse, or store, should pay himself a regular salary. This should also be done to any of his own family working for him. He should allow a percentage of the cost of his plant for depreciation on such as greenhouses, fixtures, tools, etc., every year, make allowance for bad debts and so on, and when this is done it is then that he arrives at the knowledge of the success or failure of his business.

## NASSAU COUNTY SOCIETY

At the last meeting of the Nassau County, N. Y., Horticultural Society at Glen Cove, L. I., President William Noonan occupied the chair. President Noonan appointed Ben Arthurland, John Higton and Charles Biggers to judge the exhibits and their awards were as follows: pot or pan of tulips, 1st, Frank O. Johnson; 3 heads of cauliflowers, 1st, Jack Henderson. The committee reported the tulip schedule and from the variety and number of classes all will be able to compete. Mr. William Carter told of his recent trip across the pond and says he had a good time over there. Exhibits for April 13th will be 25 string beans, 12 spikes mixed antirrhinum and one pot of primula oconica.

The Society held its annual dinner at the Glen Head Hotel on March 15th. Mayor James Burns of Glen Cove City acted as toastmaster. About one hundred members and guests sat down to a dinner that was enjoyed by all. Mayor Burns presented Ex-President Thos. Twigg with a small token from fellow members and he made a very witty speech of thanks. Mr. John F. Johnston gave a short talk on our Society. Mr. Frank Bowne responded for the guests. Mr. James Young gave a song, getting an encore and a hearty vote of thanks. Mr. W. G. Collins of Carters, Boston, and Mr. Wallace of Carters, Glen Cove, spoke for the seed trade. Mr. Thos. Twigg and Charles Plumb each gave a song. Mr. Joseph Robinson gave a short talk. The dinner committee was given a hearty vote of thanks. Mr. Robert Purchell gave a song and President Noonan outlined his program for the year. Mayor Burns spoke for the City, getting a vote of thanks with cheers for acting as toastmaster, bringing to a close a very enjoyable evening.

**Flower Shows** The National Rose Show in Boston proved quite as big a success as was anticipated. The rose growers, aided and abetted by the orchid growers, put up an exceedingly fine exhibition. Flower shows are coming to have a growing importance in this country. That is well. The country itself will be better off in every way if its citizens learn to spend their leisure hours in the company of flowers and in learning more about them and their cultivation.

But what is the effect of these flower shows on the trade? New York's experience would seem to supply the answer. The Easter business following the big show there was tremendous and it is pretty freely admitted that the influence of the show had much to do with stimulating the demand. Occasionally there is a dissenting opinion. We have heard the statement only recently that flower shows hurt the business of the retailer. The statement was backed up by the argument that flowers of great size and perfection were shown at the public exhibitions and gave visitors the impression that just such flowers should be sold by their florists. When, later, they went to make a purchase and were given smaller and less perfect blooms they were dissatisfied.

We do not believe that this argument is well supported by the general experience of florists. Without the different flowers for comparison, buyers are not likely to notice any great difference in quality. Moreover, any reasonable person will accept the explanation that the flowers staged at a show are grown under special conditions for exhibition purposes. And even if there should be a modicum of fact in the claim, it is more than offset, we are certain, by the increased demand which must come from any well staged flower show. The stimulating effect of such shows is seen for months. People are moved to obtain flowers for their homes who had not before realized their need of them. No, the shows are worth while, from the viewpoint of the trade. Let us have more of them.

**Roses** All down through the ages the rose has been the queen of the garden and queen it still remains. It may have rivals in the glorious peony and the stately lily, but it invariably triumphs in its appeal to the favor of flower lovers. No other flower gives such complete satisfaction as the rose and few adapt themselves better to all kinds of situations. In its almost infinite varieties of form, color and habit it holds a revelation of beauty for all who have beauty in their souls. It grows in almost every clime and its opening buds follow the sun around the earth's wide circle. It can be used to cover acres of garden space without monotony or excessive duplication and yet a single climbing rose over a gate post or at the front door of a modest cottage is a complete picture in itself.

Naturally the popular demand for roses and rose plants has been to the great advantage of the trade. Rose breeding is being attempted on a much larger scale than ever before and many striking novelties are likely to appear in the next few years. All this is good for the trade, for it helps to maintain popular interest and to increase the demand for rose plants.

It is very interesting to read what Mr. W. R. Pierson has to say in the Rose Annual for 1921 about the production of Manetti stock in this country. He declares that the high prices being charged for this stock in Europe is forcing its production here in abundant quantities. Indeed, Mr. Pierson sees good even in Quarantine 37, which, he says, has not hurt the cut rose business and will make the bedding rose industry greater. Looking ahead, he sees that American roses will take the place of those from over the water, and believes that the slogan of the future will be "American Roses for Americans."

**Hospital Day** There would seem to be possibilities in the proposal that a National Hospital Day be observed each year. The plan has already been launched and May 12 fixed as the date. The significance of this date lies in the fact that it marks the anniversary of the birth of Florenee Nightingale, whose name will be linked for all time with deeds of mercy. The opportunity for making such a day popular is found in the fact that thousands of sick and wounded ex-service men are still under treatment in the various institutions of this country and Canada. These boys can be greatly heartened by gifts of flowers, and, of course, the whole plan revolves about the use of flowers to make the hospitals more cheerful and their inmates happier. On Hospital Day all who can will be expected to visit some sick relative, friend or acquaintance, and, of course, the natural thing under the circumstances will be to carry a little gift of flowers. Perhaps it will be worth while for florists to design special offerings for this occasion or to feature it in their advertising.

**Cultivate the Papers** It pays to cultivate the newspapers. In almost every city, large or small, there are papers which will gladly publish articles relating to the growing of flowers or the observance of special days when flowers are used freely. It is simply a matter of presenting the material in reasonably concrete form. Easter saw considerable publicity obtained for florists in this manner. In Chicago the newspapers were especially liberal in their space devoted to describing the growing of Easter flowers, while similar articles appeared in the papers of other cities. Boston was entitled to something of this sort, as its florists advertised liberally, but apparently this means of getting many dollars' worth of general publicity for nothing was overlooked.

## COOLIDGE CARNATION

### A New Creation of William Sim—Named For Vice-President's Wife.

William Sim, Cliftondale, Mass., has a new carnation which has been christened the "Coolidge" with considerable eclat. A long article about the new carnation appeared in the Boston Globe recently, and, according to Mr. Sim, the facts as the reporter gave them are in this instance entirely correct. Here, then, is the account of the origin of the "Coolidge."

"In October, four years ago, I took the pollen of a carnation called Rosette and used a white Matchless for the seed parent. That gave me one plant of this fairy I've named for our great Vice President.

"From the seed obtained by crossing Rosette with Matchless I got the original Coolidge carnation plant—only of course it was nameless until yesterday. And the original plant is only good for one year. I took cuttings from it, got about 25, and rooted them in sand. From the plants resulting I took more slips and kept that up until now you see I have about 2000 plants. This carnation is rather conservative. I don't get so very many slips from it. It takes about five years anyway to grow a new carnation so it will be ready for market. This won't be ready until next year. Naming it as I have, therefore, can hardly be a commercial scheme."

The flower is given its name in honor of the wife of the vice-president of the United States, as indicated by the following letter:

"Mrs. Grace Coolidge, Vice Presidential Apartments, Hotel Willard, Washington, D. C.

"I am sending to you by express some of the flowers of a new carnation originated by me in which I take the pleasure of naming Mrs. Grace Coolidge. This liberty is taken because I am a great admirer of your husband. With your permission I shall have the name registered with the American Carnation Society. Respectfully,

"William Sim."

The "Coolidge" carnation is described as a large flower, white in color, but with tiny red threads cutting the center of every petal. Mr. Sim has given many good carnations to the trade, and it will be interesting to follow the future of this, his newest product.

## EIGHT PLANT NOVELTIES

Eight striking plant novelties are being distributed for the first time this season by an English nursery and seed concern, Baker's, Codsall, Wolverhampton, England. These are: Aster Amellus Lavanda, a pale lavender of highly praised form and habit; Astilbe Arendsi "Beauty of Codsall," a white form of this popular variety; Delphinium "David," delicate rosy lavender flowers, superior in color; Delphinium "Jean," double silvery flowers, exceptionally large and showy; Delphinium "Butterfly," a combination of light and dark blue, pink, rose and white, semi-double; Geum Lady Strathenden, a golden-yellow form of the popular scarlet Mrs. Bradshaw; Phelox Maculata Alpha, a new and distinct break in Herbaceous Phlox with an elongated flower spike; Primula Denticulata Magnifica, a super-strain of Denticulata Grandiflora with large flowers and a much wider range of colors. A picture of the Geum Lady Stratheden is shown here.

## NEWS NOTES

The many friends of Mr. Henry S. De Forrest will be interested to know of his new connection with the William H. Lutton Co., greenhouse builders, of New York City. For several years Mr. De Forrest has been with Hitchings & Co., and with Pierson U-Bar Co., and is very well known in the trade.

Waters & Brown, of Salem, Mass., are preparing to add a seed department to their store on Church street.

E. A. Newman, the violet grower of Woburn, Mass., is nursing a broken wrist which he received while cranking his car.

# BREEDING CARNATIONS

By C. H. CONNORS
New Jersey Experiment Station

NUMBER 3

Tools Used In Breeding Carnations

### Handling the Seedlings

Such plants as remain after the field culling are set in the bench and, if records are to be kept, each one is given a number. Sometimes a serial number is given with two figures annexed to designate the year in which the cross is made, as: 16320, seedling number 163 from a cross made in 1920. By this method, no distinction is made, except in the record book, of those seedlings that belong to each cross. Another method is to give a number to each parent, and compose the number of the seedlings from the numbers of the parents, the year the cross was made and the serial number of the individual. For example, let Enchantress be 1; Matchless 2; Ward 3; Laddie 4. Then No. 13820 would be seedling No. 8 of Enchantress X Ward, made in 1920; 422521 would be seedling 25 of Laddie X Matchless, made in 1921. This system may be a little cumbersome. Another method is to have a letter for each series and give the seedling a serial number; as, 125 a; 32 b. The latter system is less cumbersome, especially if crosses are made between seedlings of different years; 125 a X 32 b is a little easier to write than 13820 X 422521. The advantage of the former method, however, is that you have there the parentage of the seedlings without the necessity of consulting the record.

Cull out all undesirables as soon as they bloom. Out of 200 seedlings there may be no one that is outstanding, although a few may be a little nearer to the ideal than the parents. These should be saved. They may be self-pollinated, crossed among themselves, or crossed with or on the parents. Self-pollination is perhaps a little more to be recommended than crossing. Close selection should be followed. By following this procedure, the ideal will in time be attained, but it will require patience and perseverance.

### What We May Expect

It is not possible to prophesy with certainty what may be expected in a lot of carnation seedlings except with respect to the form of the flower. We recognize three types: single, commercial and "bull-head." By "bull-head" is meant a flower formed from a globular bud that always splits, and may have from 100-400 petals. Where two varieties of the commercial type are crossed or if the commercial type is self-pollinated, one-fourth of the resulting seedlings will be singles, one-half the commercial type, and one-fourth doubles or "bull-heads." This follows the Mendelian law. Of course, the numbers may not be exactly 1:2:1, but will approximate that ratio. All of the singles in the following generation would yield all singles, all of the "bull-heads" would yield "bull-heads," but the commercials would again split up in the 1:2:1 ratio of singles: commercials: "bull-heads."

If a commercial is crossed with a single, about one-half will be singles and one-half commercials. If single and "bull-head" are crossed, all will be commercial.

We have not as yet, so far as records show, been able to secure strains of carnations that will come absolutely true to color from seed. One worker with this plant has been endeavoring for seven years to get pure color strains of this species and is just now seeing success. Given pure color strains, the inheritance of color can be studied.

Generally, a white that shows no pink or red under any condition is pure. But the other colors are very much mixed. Take Enchantress, for example. This variety is notable for its sports, having sported white, pink, rose-pink, white and red, red. If we sow seeds of Enchantress, we get all of these colors. Hence, who can prophesy what the seedlings will be. Few records are obtainable of the ancestry of our commercial varieties. Most of them are much mixed as to color, and are all more or less in class of chance seedlings. A definite example can be given. Princess Dagmar was crossed with Matchless. Among the seedlings were red, white, variegated, purple, pink light and deep, and various combinations.

However, if a red seedling is the ideal, the natural procedure will be to cross two reds. If a pink is desirable, the obvious method is to cross two pinks, although in so doing a red may result, since pink is only a dilution of red.

The same thing holds true with other characters, such as fringed petals, fragrance, calyx form, substance of flowers, and the ability of the petals to stand out above the calyx, a habit due to length of petal stock. Splitting

of the calyx is not generally considered a heritable character, as it is most frequently due to cultural and weather conditions, but to a slight degree the form of the flower is responsible, so only in this respect is that character heritable.

### Conclusion

Too much emphasis cannot be made on the desirability of systematic methods in breeding. Keep records. I should like to see the time when every flower is registered with its parentage, much after the fashion of the animal stud books. Emphasis is also put upon the desirability of breeding systematically, not hit or miss, but get something near your ideal and use this as another step up the ladder to success. Cross, select, self-pollinate or cross again, select further and in the end you will be better satisfied with your work.

Then I want to make an appeal to the sentimental side of an artist, who is also a craftsman, the florist, and that is just this: do not be too hasty in disseminating something new. The writer knows of one case where a seedling carnation was raised. It was a new color, beautiful in form and fragrance, very productive both of flowers and cuttings, and did not have one split flower on the seedling plant nor on the 30 plants grown the next year in the same house as the original. It looked like a winner. The following year it was grown in another house with a different system of heating, and about half of the flowers were split.

How many "world-beaters" are put out that are seen for a year or two and then never more? To my mind, although it may seem radical, a man who disseminates a new variety without taking every precaution to test it under varying conditions to learn if it is "fool-proof" is looking more toward personal success than the upbuilding of floriculture. Let us put a little more sentiment in business.

Finally, do not take up breeding for fun. It is real work, intensely interesting and fascinating, but requiring extreme care and attention to details, and patience. If you take it up, stick to it until you see it through and you will gain more than the price received for something new: the high inward feeling of a work well done.

## TENTH ANNIVERSARY OF THE PENNNSYLVANIA SCHOOL OF HORTICULTURE FOR WOMEN

A luncheon held at the Ritz-Carleton Hotel, Philadelphia, on the 17th of March, brought together a goodly array of friends of this well-known training school for young women.

Dr. John M. MacFarlane, Botanical Department of U. of P., the first speaker, gave his opinion as to the increasing demands for the services of the trained worker on the land. His earnest presentation of the claim which Ambler is now making on all who believe in horticultural work for women was received with enthusiasm and applause.

Mrs. George U. Crocker, Vice-President Woman's National Farm & Garden Association, spoke of the inspiration afforded by this earnest group of horticulturists, and outlined the tieup of the Farm and Garden Association, and its several branches. The practical work of the New England Branch, its enormously enlarged Christmas Market and the new opportunity, afforded by a Saturday Morning Week-End Food Sale, were also touched upon. The eminently useful reaching out of the city members of the women on the farms, the give and take of exchange of interest as well as of the material end of this problem were set forth.

Mr. H. B. Fullerton, Director Long Island Experiment Station, spoke with his old-time enthusiasm on the work which women had done and must surely do, to make life better and richer for all, and touched in happy fashion on the work done "overseas" as well as in this country, for the continued betterment of human conditions.

Miss Emily Exley, a graduate of Ambler, and now a well-known landscape architect of Philadelphia and elsewhere, set forth her appreciation of what Ambler had done for her, and was enthusiastically applauded for her modest eloquence.

Miss Elizabeth L. Lee, in a few happy turns of phrasing, gave due credit to some of the graduates of the school who had gone out to big pieces of constructive work, and also spoke as to the practical value of some of the market produce offered for sale by the school greenhouse. The graceful spring grouping of flowers on the luncheon tables spoke almost for themselves, and the delicious hothouse tomatoes, which also assisted in the decorations, showed no small amount of intensive cultivation.

At the close of the speaking, there was a general outlining of the gen-

eral policy of the school. Supported solely by the gifts of its friends and offering as it does the many advantages of such skilled training in horticulture, this school at Ambler, Pa., has, in its short ten years of purposeful existence, given 36 diplomas to graduates who have completed the course; and afforded ample opportunity for such special or short course work as has been required by 357 students.

An attractive old farm house has been converted into an administrative building and dining room, and a suitable dormitory accommodating the resident faculty and the twenty students has been added, while non-resident students can easily find living quarters, near at hand.

The officers of the school are: Miss Jane Haines, Pres., Cheltenham, Pa.; Miss Emma Blakiston, 1st Vice-Pres., Fort Washington, Pa.; Mrs. Edward W. Biddle, 2nd Vice-Pres., Carlisle, Pa.; Mrs. John Gribbel, 3rd Vice-Pres., Wyncote, Pa.; Miss Hilda Justice, Sec., West Clapier, Germantown, Pa.; Mrs. W. G. Morse, Treas., 8025 Seminole Ave., Chestnut Hill, Pa.

Among its Advisory Board may be found the following well-known names: Mrs. Charles W. Henry, St. Martin's, Pa.; Miss Martha G. Thomas, Whitford, Pa.; Miss Alice G. Howland, Bryn Mawr, Pa., and Mrs. Samuel T. Bodine, Villanova, Pa.

## FIFTH NATIONAL FLOWER SHOW

### Grand Capital Prizes for the Great Exhibit at Cleveland

At a meeting of the National Flower Show committee in New York considerable discussion took place in regard to the arrangements for the trade exhibits. In accordance with the plan discussed at the Washington meeting relating to the adoption of a uniform decorative scheme to cover all trade displays, the Secretary presented a sketch embodying a layout, which the committee took under consideration. The lack of such a decorative scheme at the New York International Flower Show was commented upon by different members of the Committee, and it was unanimously agreed that it was the one weak feature of the Show, opportunity for a perfect decorative scheme being lost because each exhibitor had been free to work out his personal ideas, resulting in a jumble of decorative effects far from pleasing. It was decided that estimates from Cleveland dealers be obtained as to the cost of carrying out the idea expressed in the sketch, including uniform railing and other details.

The rental for trade space was, on motion of Mr. Knoble, fixed at $1.75 per square foot, this price to include the erection of a booth after a style decided upon, suitably decorated, and the official sign, which would also be made part of the decorative scheme.

There was a lengthy discussion as to providing an exhibition feature which should be the principal feature of the show. It seemed to be the consensus of opinion that this feature take the form of a garden, and, finally, on motion of Mr. Roland, it was decided that provision be made for four garden groups, for which $4000 be appropriated, with a special sweepstake prize of $1000 for the most meritorious and adaptable exhibit in the class, which is to be open to all, and known as the Grand Capital Prize Class.

The schedule description of the class was arranged as follows: The best development of a garden covering 1,000 square feet. An exhibit may include lawns, flower beds, rose gardens, shrubbery, borders, rose beds, bulb beds, or any exhibit that the artistic ability of an exhibitor may suggest, as the widest latitude will be allowed in the competition. The first four entries are to have preference in allotment of space. This capital prize is believed to cover the largest amount of money ever offered in one class at any exhibition in this country.

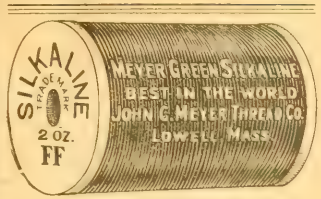
It was also decided that all entrants in the capital prize class must pay a guarantee fee of $200 to the Secretary, previous to January 1, 1922, as an evidence of good faith in the fulfilment and completion of an entry; and that such fee should be forfeited if an entrant does not complete his entry and make the exhibit. The fees so paid are to be returnable upon completion of the entries.

The committee was of the opinion that the prizes offered in the schedule for a display of bulbs, etc., arranged as a bulb garden covering 500 square feet, were too low, therefore it was decided that the prizes be changed to read: First prize, $500, with second prize $300; and that the offer of a gold medal in this class be withdrawn.

The Secretary reported that up to the time of the meeting the sum of $16,297 had been subscribed to the Guarantee Fund.



Grover C. Neibergall, of the Forest Flower shop, has purchased a portion of the Cody place, just over the city line in Greenport, N. Y., and will erect a greenhouse thereon to supply his city trade. The contract has already been let to the King Construction company of North Tonawanda, and this firm will soon begin work on a most modern steel building which will be finished by June 1.

### HORTICULTURAL BOOKS

EVERY GLADIOLUS GROWER, SEEDSMAN, NURSERYMAN or FLORIST who has but limited space at hand for growing purposes and wishes to realize the HIGHEST POSSIBLE YIELD in FLOWERS, BULBS and DOLLARS per SQUARE FOOT should have a copy of my new book, "THE GLADIOLUS FOR PROFIT." Every detail connected with the outdoor growing of these bulbs for the GREATEST PROFIT is given. Illustrated with twelve halftones from actual photographs showing my intensive system of culture that BRINGS THE PROFIT. A special chapter on DAHLIAS showing the PROFIT WAY to grow these for cut flowers and bulbs and, most important of all, WHAT VARIETIES to grow in the MIDDLE WEST in order to get a crop and the money EVERY YEAR. The merits of ONE HUNDRED and THIRTY varieties of Gladioli are cussed and discussed and the MONEY MAKERS POINTED OUT. There is good money growing the Gladiolus if you START RIGHT, and this book will START YOU RIGHT. Satisfaction or your money back. Mailed postpaid anywhere upon receipt of $1.00. R. M. Champe, Oakland Gardens Nursery, Walled Lake, Mich. Address all letters until April 15, next, to me at my southern plant farm, Box 412, St. Petersburg, Fla.

### PETUNIAS

PETUNIAS.

Diener's Ruffled Monsters, single. The largest and most beautiful ruffled variety of Petunias in existence. Ruffled Monster seed in separate colors, pink, red, variegated, white, red with black center, pale lilac, and all colors mixed.

The following somewhat smaller than the Ruffled Monsters; Pearl of Kentfield, flesh pink frilled, dwarf, purple or blue and white frilled.

Price per package, 50c

Catalogue will be sent free on request. Write for it today.

Mr. W. L. Ferguson, Smiths Falls, Ontario, under date of Dec. 2, 1919, writes us the following in regard to our Petunias:

"Last year I purchased Petunia seed from you. I think every seed germinated and the blooms were the finest ever seen in this part of Canada. Only about 8 per cent of the plants could be classed as common. I want more of the same quality each year."

Mr. Rudolph Nagel, Lancaster, Pa., under date of Dec. 14, 1919, writes us:

"I had, last year, just a few of your Petunias, but I am sure I could have sold thousands of them. They surely came up to your claim and way ahead of my expectation."

Barb wire fences may be alright to keep cows and horses in a field; but when a fellow has to climb them with overcoat tails and a camera to catch on, it's quite another matter. However, it was worth it all to get this view of the entire range. The two right hand houses and leanto in front, are Hitchings.

## JESSE P. KING, FLORIST

The first time I met Jesse King, was at the Niagara Falls S. A. F. Convention, some 15 years ago. It was then he told me how he used to have a store at Mount Airy, Maryland, which he was obliged to sell, because of poor health.

Just to have something to occupy his time until he was good and husky again, he tried his hand with a little home brew sort of greenhouse.

From then on, you know well enough what happened. The photo shown here, fully confirm it.

Well, sir, the mercantile business certainly lost a top-notcher when he dropped out; but the florist cult sure did gain by it.

I'd like to tell you all about a most delightful day two of us recently spent with him; but there wouldn't be room enough if I took all this page, even if there wasn't an inch of room taken up by the photo.

However, you would hardly expect me to end, without saying a word or two about our houses.

So here it is.

Jesse King had other houses before he had Hitchings. The fact that Hitchings are the last ones he built, would seem to indicate he likes Hitchings houses best.

In a couple of weeks will show you a couple more photos and tell you more about this model Maryland range.

## UNIQUE ORCHID SHOW

### Special Exhibition Of Native Wild New England Orchids in Boston

As this issue goes to press a unique and unusual exhibit of native orchids is being staged at Horticultural Hall, Boston, by Mr. Albert C. Burrage, the President of the Mass. Horticultural Society and also the President of the new American Orchid Society.

The exhibit consists of over 500 orchid plants in flower, representing nearly all the 14 genera and a majority of the 48 species which grow in New England. All of the larger and showier species are shown.

The exhibit is remarkable for the fact that the plants are shown as they grow naturally in swamps, meadows, damp woodland and hillsides. In other words the Hall is filled with moss, grasses, osmunda, shrubs and pine, cedar, hemlock and spruce trees; and in this miniature forest are scattered the clumps of orchid plants in flower. Much thought and energy have been devoted to this installation and grouping and the result is most picturesque.

It is believed that no such collection of our terrestrial native orchids has ever been made or shown in any such striking and spectacular way. Certainly no exhibit has ever been made of so many different kinds in flower at one time.

The plants are clearly labelled and carefully described in a helpful little pamphlet.

In a small room next to the Hall are shown, in lighted tables, a complete herbarium set of dried specimens—the collection of Mr. W. P. Rich, the secretary of the Mass. Horticultural Society; and also a complete set of photographs of these orchid plants in flower taken by Mr. E. H. Lincoln of Pittsfield, Mass.

The whole exhibit is highly educational and instructive as well as beautiful and interesting.

Many of the plants are rare and almost never seen except in the few spots where they grow. Others are of magnificent size, form and color. The horticulturists and botanists of Massachusetts are fortunate in having this opportunity of seeing at one time in one spot such a great collection of these beautiful flowers which out of doors bloom only at different seasons. This was made possible only by the intensive cultivation and forcing given them at Orchidvale.

We believe this will prove to be one of the most interesting horticultural exhibits ever seen in Boston.

## THE TALK OF THE TRADE

Of all the roses shown at the Boston exhibition, none seemed to make a stronger appeal to the general public than the Ophelias. And certainly it is seldom that better Ophelias are seen than those which were exhibited by Thomas Roland in his prize winning collection. The Ophelias in the Pierson exhibit were also remarkably good. The size of these flowers and the length of stem was a revelation to many people and it is to be hoped that the public will not demand such specimens from the florists, for they certainly will not get them. One of the lecturers declared that it cost at least a dollar apiece to produce flowers of that character, and probably he was right.

---

While the retail florists did not have a very prominent part in the show, some of them did a lot of extra work unseen by the visitors. Mr. B. F. Letson, of Carbone's, toiled from half past ten one night until three o'clock the next morning, arranging the groups of roses in Mr. Roland's exhibit on Friday. Sidney Hoffman worked very hard. Not only did he arrange the roses shown in the Pierson group, —no small task,—but he also staged the remarkably fine exhibit of carnations put up by William Sim. I think that this exhibit of Mr. Sim elicited more expressions of admiration from men in the trade than any other feature of the show, and I believe that the success of the exhibit

Ophelia Rose

was due much to Mr. Hoffman's excellent arrangement. Evidently the public found much of interest in the carnation room, for the aisles were often crowded, and many were the exclamations of surprise and delight when the vase of Laddie, exhibited by Samuel Goddard, was reached. It certainly would be difficult to surpass these carnations as Mr. Goddard grows them.

C. S. Strout's vase of White Delight also met with much appreciation. It is seldom that carnations of any kind are seen with such length of stem, and the keeping quality of these flowers was often remarked upon. I do not think that Donald made much of an impression, but Rosalie seemed to hit the popular fancy, and of course no little interest was shown in Mr. Sim's new "Coolidge" carnation. This is a very pretty flower, but it would seem to lack something in length of stem.

---

Of course the visitors in general do not know much about the newer roses, but naturally picked out American Legion as a novelty. I am afraid, though, this rose was something of a disappointment, for within a short time the blossoms had taken on a purplish hue which was not very attractive. I heard more favorable comments on the old-time Hadley than on any other red rose shown.

---

It is difficult to realize that there were sixty distinct varieties of roses in the Roland garden, but that number was found to be correct by actual count. In this garden were a number of new kinds, including S. K. Ringe, the yellow rose being put out by Dreer, and said to equal if not surpass the Duchess of Wellington. By the way, I understand that a large proportion of the roses used in this garden were Dreer stock, and certainly they reflected much credit on the establishment.

---

The azaleas formed a strong feature of the show, much stronger than had been anticipated, I think, as they were not given much prominence in the advertising announcements. It would seem as though there might be a bright future for some of those in the collection from Professor Sargent's estate. Some of these azaleas, Prof. Sargent tells me, are easy to grow from seed, and should make very satisfactory Easter plants. If I am not mistaken, measures are to be taken which will result in the eventual dissemination of these azaleas in the trade. Florists will do well to keep their eyes on them.

The Louisa Hunnewell azaleas, grown to perfection by Supt. Hatfield, of the Hunnewell Estate at Wellesley, were wonderfully fine. I think no plants shown aroused greater enthusiasm. A collection of these plants has been set out on Bussey Hill in the Arnold Arboretum, I understand, and the public will be able to enjoy them there in future years. If this plant ever gets into commerce, it will be greatly sought after.

The exhibit of Kurume azaleas from the Ames Estate at North Easton was one of the gems of the show. The setting was extremely beautiful, and much credit is due to Mr. Cruikshank, of the R. & J. Farquhar Co., for the success of this display.

---

Henry Penn has a faculty for doing the right thing on such occasions, and he added to his reputation for generosity and public spirit by taking liberal space under his own name in the newspapers for calling attention to the Rose Show at Horticultural Hall. It was a graceful thing to do, and undoubtedly brought him business as well as helping the show. Mr. Penn is one of the few retail florists who had an exhibit and received a silver medal.

---

Now that Easter is over with, there is a lot to think of in connection with lilies in particular, but also the general line of Holland bulbs. As to lilies, the call without doubt was ahead of the supply. A much larger amount of stock could have been sold without any need of cutting the price. In a general way of speaking, the better trade bought its lilies at 50 cents per bulb. Some stock was sold for less, but it was not at all necessary to go under that price. Two weeks before Easter there was quite a bit of grumbling about the growers' price on lilies. The store trade objected to more than 20 cents, and tried to get as much below that figure as was possible. But I know personally of quite by the grower was the bottom price, a number of instances where 25 cents and I doubt if it would have been necessary for any grower to sell good stock at a lower price. And when it comes right down to the hard facts of the matter, if lilies are to be grown at a profit, with existing conditions remaining the same, 25 cents is as low as it is possible to go.

Just as I thought before Easter, we found that the average count was below other years. It took many more pots to count out a total of a thousand buds than it has in previous years, and the one safe way for a grower to take orders, if these conditions continue, is to sell by the pot instead of promising a certain number of blooms, and in that way being left in the dark as to how his count will come out. The same conditions are apt to continue for another year. Large bulbs will be very scarce and that will mean the added quantity of 7-9's which will be grown, with the consequent lower average on the count.

---

From all I can see now, there is not to be any particular increase in the planting of lilies for the coming season, but I do believe that a grower who can finish his stock in good shape, handling it properly from the beginning and thereby eliminating any unusual losses, will make a reasonable profit.

Lily bulbs have turned out a good average, so far as diseased stock can be considered. The number of pots to be dumped has been not one bit greater than ordinary years, and I am not so sure but what it has run a trifle ahead of the average. And so I think that with labor and coal holding about even, 25 cents at wholesale is not too much to pay.

With Dutch bulbs there is more dissatisfaction. The price is not even on any of the Dutch lines, so that a grower cannot tell just where he stands. The great fluctuation in price which the grower had to stand for this year left them at a point where he didn't know how to figure. It is also true that there has been more than a normal amount of stock that did not produce good flowers or finish good enough for market, and I find that a lot of growers are going mighty careful for the next season. I think they are justified in cutting down their quantity, and unless conditions improve, both as to the health of the stock as well as the buying price, it will be well for the growers to go very careful in their orders. The greenhouse man who grows only for retail trade can usually gauge himself with safety, but that man who is growing for the wholesale market can well afford to be careful.

SUMMER COURSE IN HORTICULTURE

School of Horticulture for Women, Ambler, Penna., (18 miles from Philadelphia) offers an August Course in Floriculture, Vegetable Gardening, Fruit Growing and Canning and Preserving. Practical work out of doors forms a large part of the schedule. Teachers wil be especially interested in this course. Circular upon application.

ELIZABETH LEIGHTON LEE, Director.

## AMERICAN ORCHID SOCIETY

The American Orchid Society, long a dream of orchid growers in this country, is now an accomplished fact. It was organized at the Flower Show in Boston, and new members are being added from many parts of the country. The newly elected officers are as follows: President, Albert C. Burrage, Boston, Mass.; vice-presidents, E. B Dane, Chestnut Hill, Mass.; Clement Moore, Hackensack, N. J., and T. H Wickwire, Jr., Buffalo, N. Y.; secretary, A. J. Loveless, Lenox, Mass.; treasurer, Louis Burke, Philadelphia, Pa.; trustees: L. D. Towle, Newton, Mass.; E. S. Webster, Chestnut Hill Mass.; G. S Baldwin, Mamaroneck, N. Y.; Edward Roehrs, Rutherford, N. J.; Thomas Roland, Nahant, Mass.; Oliver Lines, Lenox, Mass.; John E. Lager, Summit, N. J.; Oakes Ames Boston; Richard Wright, New York, J. J. Lane, New York; John S. Hay, Philadelphia, Pa., and A. J. Fish, New Bedford, Mass.

After the election, Pres. Burrage gave a dinner to the members of the new society at the Algonquin Club, and afterward entertained them at his home.

The life members of the association, each of whom has paid a hundred dollars into the treasury, consists of A. C. Burrage, C. D. Burrage, Thomas Roland, George W. Butterworth, J. C. Butterworth, and George E. Baldwin.

Among the other members are the following, although this is not a complete list:

Judge C. W. Hoitt, W. A. Manda, John E. Lager, Harry Hurrell, Duncan Finlayson, Loren O. Towle, W. N. Craig, Miss Eileen W. Law, Julius Roehrs, Edward Roehrs, Oliver Line, Frank S. Sealey, Donald McKenzie, H. Walter Child, Frank P. Lincoln, Miss M. R. Case, George I. Amann, Paul de Navc, Douglas Eccleston, Frederick W. Pocock, Alfred J. Loveless, Arthur E. Miles, John L. Smith, Gustave Thommen.

## NEW YORK BOTANICAL GARDENS

Tulip lovers and others will be given a great opportunity, in the latter part of May, to visit and inspect the largest collection of Darwin and breeder tulips ever brought together in one place in this country. Through co-operation with the General Bulb Growers Society at Haarlem, Holland, a collection of over 17,500 tulips, the gift of that organization, was planted last fall in the Horticultural Gardens, located just opposite Fordham Hospital on the Southern Boulevard. This collection embraces 121 kinds of Darwin tulips and 65 of breeder. Another collection at the same place, the gift of John Scheepers, Inc., contains over 5,400 bulbs, representing 56 kinds of Darwin tulips, 32 of breeder and 25 of cottage. In the two collections there are about 23,000 bulbs and 241 kinds; allowing for duplication of kinds, there are: 140 varieties of Darwin; 73 of breeder; 24 of cottage; of species, 2; miscellaneous, 2.

Another collection, more comprehensive in the types represented, is located in the beds in the court of conservatory range 1. Here there are over 9,800 bulbs in the seven beds, and 167 kinds, as follows: Darwin, 68; breeder, 37; cottage, 38; late double, 2; early single, 8; early double, 8; Rembrandt, 3; bizarre, 3.

The combined display at the Horticultural Gardens and in the court of conservatory range 1 represents a total of over 32,800 bulbs, and, allowing for duplication, 325 kinds.

# CATTLEYA TRIANAE ALBERT C. BURRAGE

Mr. Albert C. Burrage, president of the newly formed American Orchid Society, has been honored in a fitting manner by the Julius Roehrs Co., of Rutherford, N. J., which has given his name to a variety of Cattleya trianae. The "Albert C. Burrage" orchid is considered the finest and largest form of any Cattleya trianae that has ever been flowered. The accompanying illustration gives some idea of the flower, although no picture can do it justice.

## OUR NATIVE FLOWERS

"Breathes there the man, with soul so dead,
Who never to himself hath said,
This is my own, my native land!
Whose heart hath ne'er within him burned,
As home his footsteps he hath turned,
From wandering on a foreign strand."

Sir Walter Scott sounded many a pibroch in his day, but none which so gripped the human heart as these few lines. For grateful as we are to the men who have faced danger and hardship in travelling through Korea, Siberia, China, Japan, Labrador and Iceland to bring new plants and flowers to our garden, we yet love best the flowers which we picked in our woods and fields and by our roadsides when we were children.

We do not want to keep the children from picking flowers in our woods if they will first learn to love and care for them. But most of us now feel especially when we see bunches of beautiful pink moccasin flowers or cypripedium acaule which have been broken from their stems to satisfy a moment's greed and then faded, thrown by the roadside, that we must protest against the wanton destruction of bird and flower life in our woods.

We do not need more legislation but we want to educate the children and the automobilists to love the flowers, to feel that they too have a right to live, to grow and so make the world more beautiful.

Many efforts are being made in this direction. We want especially to call attention to a meeting to be held by The Wild Flower Preservation Committee of the Chestnut Hill Garden Club and the North Shore Garden Club on Friday, April twenty-ninth, at half past three, in Horticultural Hall, Boston.

Mr. W. D. Richardson of Chicago will speak at this meeting on "Birds and Flowers Through the Seasons." His lecture will be illustrated with hand-colored slides made by Miss Grace Nichols, also of Chicago. No tickets will be needed, and we hope that many will be interested to attend this free lecture so as to show their interest in the preservation of our native flowers.

This lecture at Horticultural Hall on Friday, April twenty-ninth, at half past three in the afternoon, will be followed by an exhibition of our native flowers at Horticultural Hall on May twenty-eighth and twenty-ninth at which Mr. Kenneth W. Gillett of the well known wild flower gardens at Southwick, Massachusetts, will speak on the cultivation of our native flowers.

At this exhibition prizes are offered by the Massachusetts Horticultural Society for Miniature Rock Gardens covering a space of three feet by two and a half feet, filled with wild plants and flowers, named. For these gardens three prizes are offered of twenty, fifteen and ten dollars. There is also a class for wild flower collections, named, one bottle of each kind, three prizes, four and two dollars and one dollar.

Besides the rock gardens and wild flowers, lilacs, narcissi, poppies, iris and hardy flowering shrubs are called for at this exhibition, and the William B. H. Dowse trophy for the best displays of vegetables made through the season will be offered.

Once in travelling I had given an order for a considerable amount of plants to be sent me. In offering to pay for them I was told that the bill would be sent to me. "But," I protested, "I am a stranger to you." "Yes," the nurseryman replied, "but I have had many years' experience and find that I can trust my customers for they would not come to me if they did not love flowers."

This winter it was my privilege to speak at a large dinner at which were gathered many of the men and women with whom for the last few years I had had the pleasure of working that the world might be made happier and more beautiful with fruit and flowers. In thinking of what I should say at that dinner I thought of the cordial esprit de corps that I had found among my fellow workers so I made that the dominant note of my short, informal talk.

"O toiler of the lily
Thy touch is in the man!
No leaf that dawns to petal
But hints the angel-plan;
The flower horizons open,
The blossom vaster shows;
We hear thy wide world's echo
'See how the lily grows!'"

# Four Great American Hybrid-Tea Bedding Roses

ALL ARE OFFERED IN STRONG TWO-YEAR-OLD PLANTS.

### Mrs. S. K. Rindge

(Howard & Smith, 1920).

This is, undoubtedly, the finest yellow Rose we have. While it in some stages of development, as well as in growth, resembles Golden Emblem, it is a stronger grower, and its rich chrome-yellow flowers as they mature, become suffused with salmon-pink.

Strong two-year-old California-grown plants, $1.50 each.

### Miss Lolita Armour

(Howard & Smith, 1920).

The unique coloring of this novelty is a combination of colors difficult to describe, and it is absolutely distinct from all other varieties. The flowers are of large size, full double, with petals of great substance. As the flowers expand they develop to a deep, coral-red with a golden, coppery-red suffusion. The base of the petals is of a rich golden-yellow with coppery-red sheen; delightfully fragrant. The plant is a strong, vigorous grower and very free-flowering. A Rose for which we predict great popularity.

Strong, two-year-old, California-grown plants, $1.50 each.

### Rose Marie

(Dorner, 1918).

A most pleasing shade of clear rose-pink, with ideal long shapely buds which open to very large flowers of good form. The plant is a strong, vigorous, healthy grower, and remarkably prolific. We consider it the best bedding Rose of its color yet introduced. $1.50 each.

### William F. Dreer

(Howard & Smith, 1920).

A beautiful Rose of the same parentage as Los Angeles and which, for delicacy of coloring, is incomparable with any other variety, it reminding one of the delicate tints of some varieties of water lilies. The flowers, which are similar in shape to Los Angeles, and like that variety, beautiful in all stages of development, are at their best in the half-expanded flower. These, in expanding, are of a delicate silvery-shell-pink. The base of the petals are of a rich golden-yellow which, at certain stages of development, gives a golden effusion to the entire flower, this golden suffusion being particularly brilliant early and late in the season.

Strong, two-year-old, California-grown plants, $1.50 each.

NEW AMERICAN HYBRID-TEA ROSE WILLIAM F. DREER

### Gorgeous New Climbing Rose, Paul's Scarlet Climber

This is without question the most important addition to our list of Climbing Roses in many years, no other Rose in any class can compare with it for brilliancy of color, which is a vivid scarlet that is maintained without burning or bleaching until the petals fall. The flowers are of medium size, semi-double, very freely produced in clusters of from three to six flowers each on much branched canes, the plants being literally covered with flowers from top to bottom. It is of strong climbing habit and perfectly hardy. This Rose has been most highly commended by the English horticultural press. It was awarded a Gold Medal by the National Rose Society and an Award of Merit by the Royal Horticultural Society of England, and was also awarded during the summer of 1918 the much-coveted Gold Medal at the Bagatelle Gardens, Paris. Strong two-year-old plants, $1.50 each.

## HENRY A. DREER, 714-16 Chestnut St., Philadelphia, Pa.

The above prices are intended for the trade only.

### WILLIS E. HAMILTON

Willis E. Hamilton, pioneer florist of Waldo County, died recently at his home in Belfast, Maine. Never in robust health, his last sickness dated from a severe cold last October. He was born in Swansville, Maine, March 22, 1857, and had lived in Belfast forty years, conducting the only florist's business in that city for thirty-eight years, ably assisted by his wife.

Mr. Hamilton was the originator of the Belfast Chrysanthemum, probably the latest flower in variety extant. Loved by all, Willis E. Hamilton was a kindly, courteous, Christian gentleman whose honorable business methods and sterling integrity will long be remembered by all who knew him.

January 30, 1882, he married Mary Ella Hoag of Belfast, who survives him, as do a daughter, Mrs. Clara Seekins, and a son, Everett L., who will carry on the business under the old firm name.

### NEWS NOTES

John A. O'Brien, who for many years conducted a florist shop at Menands, N. Y., died recently.

The William Pennington Greenhouse at Valparaiso, Ind., has been sold to J. M. Sheldon. The building where Mr. Sheldon's flower shop has been located is to be removed.

James Whiting, for the past two years foreman in the department of floriculture at the Massachusetts Agricultural College, has resigned to become manager of the Garrison Hill Greenhouses in Dover, N. H.

## FLOWER ARRANGEMENTS

### Combinations and Holders Which Give Good Results

Apparently an increasing amount of interest is being shown in the arrangement of cut flowers for decorative purposes. This is a matter of which the florist is bound to take notice. The public is not altogether satisfied with some of the stiff and artificial arrangements which come from the hands of old-fashioned or careless florists who also call themselves decorators. Moreover, customers are asking advice about the best methods of using the flowers which they buy and unless they get information which satisfies them and which works out satisfactorily they will begin to suspect that their florist is not as progressive or reliable as they supposed. It will be for the best interests of florists to look into this situation and perhaps to impart some instruction about the successful grouping of flowers to their clerks. If the florist himself does not feel competent to do this, let him enlist the services of a recognized expert. Some of the clubs are engaging men like Max Schling of New York of B. F. Latson of Boston to talk before their members on this subject. It is an excellent idea.

At a recent meeting in Utica, N. Y., Marklove Lowery discussed "Decorative Harmony" and some of the things which he said are well worth passing along to the readers of Horticulture.

"If you are arranging stems, up to the number of twelve, use the odd numbers, one, three, five, seven, nine and eleven. The number twelve does very well in arrangement, and so do all odd and even numbers greater than twelve, as the eye is not able to distinguish odd and even numbers beyond a certain point.

"Don't feel you must always put taller flowers in the center of every sort of dish, and shorter ones about them as a border. Let some fall over the side, with a few lying on the table. Suit your arrangement to the container. For instance, suppose the vessel to be filled is a narrow, slender little pitcher of cream-colored glaze, with rather a haughty spout pointing upwards. Try to follow out the 'will' of the pitcher by choosing the line of direction its spout so clearly points out. No arrangements are piquant and interesting that do not study first the points of the container.

"Roses may, and often do, enhance the value of some flowers, but few flowers there are that add in value to the rose. Gypsophila, Stevia, a bit of flowering Smilax, a little trailing Clematis paniculata, Bouvardia and Jasmine—White Lilac—not many more than these increase the Rose's beauty.

"As a rule, then, place Roses alone, and one color by itself, please, if they be hothouse Roses. Nobody surely but likes a garden bunch of every hue in June. Roses need their foliage and buds! It always seems to be a great pity that so much disbudding goes on these days and that so much natural grace is lost for size of bloom. What is lovelier than a Rose surrounded by its foliage and undeveloped leaves and buds, ranging from deepest green to tender crimson, and gold? And thorns—don't you like them? Stems of Roses lacking them seem very ugly, indeed, to me, and yet there is plenty of striving after thornless Roses.

"Because Carnations are so much disbudded, and because their 'grass' is lower than the flower stem, some foreign green is necessary to their well-being when displayed in vases. Asparagus is usually employed—Stevia is very good; so, too, Dusty Miller with white Carnations.

"For house decoration, Sweet Peas are far handsomer in rainbow colors than in one distinct color, unless they are for a room that requires certain tones.

"They lend themselves admirably to basket arrangements and look particularly inviting when the baskets or hampers are of pastel tints, light pink, blue, lavender and cream. Their foliage with tendrils and buds is enough. This failing, use with them Heliotrope, Mignonette, Sweet Scented Geranium, Maiden Hair Fern, Asparagus plumosus, any of them, and don't forget a few of the new colored Freesias.

"Lavender Primroses, with their leaves and purple Heather are beautiful as cut flowers, and even more attractive growing in dark brown osier baskets or hampers.

## AMERICAN IRIS SOCIETY

At a meeting of the Board of Directors of the American Iris Society, held in New York City on March 17, 1921, those present included President Wister, Treasurer Presby, Messrs. Farr, Gleason, Hendrickson and Norton. Mr. Robert Sturtevant, secretary, was prevented from atttending on account of illness. In his absence, Dr. H. A. Gleason acted as secretary pro tem.

It was announced that the annual meeting would be held in connection with the Iris Exhibition at Columbus, Ohio, about May 27th, and that small exhibitions would be held in Richmond, Va., Takoma Park, D. C., Boston, Mass., Belvidere, Ill., Des Moines, Iowa, and probably at Minneapolis, Louisville and Nashville.

The treasurer reported $900 worth of Liberty Bonds in the treasury and a cash balance of nearly $800. On motion it was decided that after December 31, 1921, the bulletins of previous years should not be given free to new members, but should be sold to members at 50c each.

It was decided to establish a collection of lantern slides, an appropriation of not less than $50 or more than $100 being voted for this purpose. These slides are to be loaned to garden clubs and similar institutions without charge, except for transportation and breakage, and will be rented to professional lecturers, such arrangements being made with the understanding that a slide bearing the legend "Shown through the courtesy of the American Iris Society" be shown upon the screen.

It was also decided to establish a library of books, magazine articles and photographs.

Dr. Gleason reported on the progress of the trial and demonstration garden of iris at the New York Botanical Gardens, indicating that the Botanical Gardens has expended about $5500 on its construction and that over five hundred named varieties were now included, most of them secured through the co-operation of the Iris Society. The directors expressed the wish that the annual meeting in 1922 might be held at Bronx Park at the time the test garden is in bloom.

It was decided to continue the policy of offering stock prizes at iris exhibitions and it was the consensus of opinion that it might be more desirable to offer such prizes in a monetary value, to be selected by the donor or winner, rather than any stated varieties, as was done last year.

H. A. GLEASON
Acting Secretary

The Lily White Greenhouses have opened two branch stores at Easton, Pa.

## NEWS NOTES

The "Flower Shop" at Binghamton has been featuring a window display copied after the prize winning garden on exhibition at the National Flower Show in New York, with a background of green shrubbery and three marble Grecian pillars. The pond was filled with goldfish and small live ducks. The garden occupied the entire front of the show window, and attracted much attention.

James A. Leith, of Haverhill, Mass., was recently married to Miss Edith Kaulback, of the same city. Mr. Leith conducts a greenhouse with his father in Rosemont, and is well known in the florist trade.

The Quality Seed and Fertilizer Co., Inc., of Stamford, Conn., has been incorporated, with $100,000 capital.

John McKenzie, the well known florist of North Cambridge, Mass., has been getting into the papers as a result of his transactions in real estate. Mr. McKenzie is one of the city's most progressive citizens, and has purchased an estate on Massachusetts avenue, where he will erect a brick block of five stores.

Selecting Sash Operating Device and Greenhouse Fittings requires careful consideration.

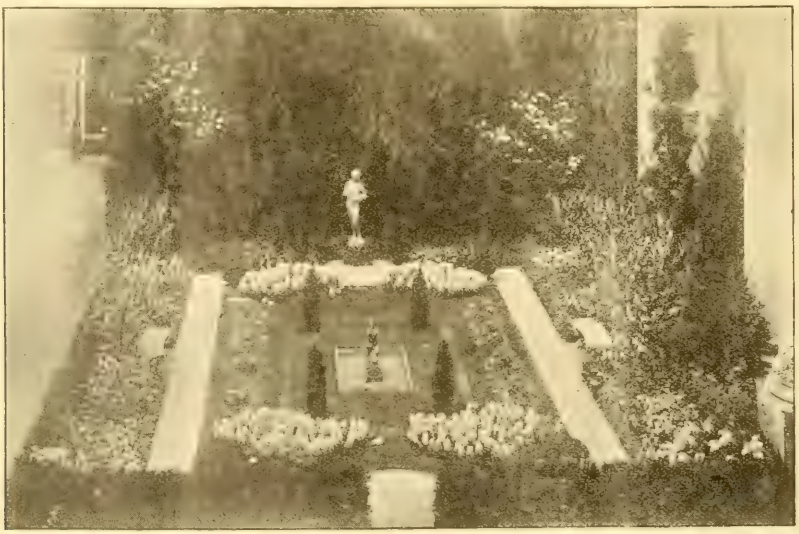
# RAMBLING OBSERVATIONS OF A ROVING GARDENER

During the recent Rose Show in Boston I had a conversation with Mr. A. J. Fish, of New Bedford, Mass., famous as a grower of climbing roses. I believe that Mr. Fish was asked to lecture on his hobby, but found himself too modest to speak in public. I am sure that the public would have been much enlightened if he had explained his methods of handling climbers, for he gets a tremendous amount of bloom and his flowers have a length of stem which amazes the judges when he exhibits them at the shows. I remember that when Mr. Fish first came to Boston to exhibit, he was given a little space in a dark corner, but as soon as those in charge caught a glimpse of the flowers which he was unloading, they begged him to take a table in the center of the hall, with the result that his climbers became a feature of the show.

Mr. Fish does not grow his roses on trellises or even on posts. He simply drives stakes five or six feet long into the ground, at the base of which each rose is planted. The stakes are about ten feet apart. When the plants reach the top they are allowed to fall down again, and fill up the space between the rows, which eventually becomes a solid mass of vines. Practically no pruning is done except to get out the dead wood, and the display is much more gorgeous than in any garden where closer trimming is practiced and the growth of the plants restricted. Of course this is the garden which is made simply for Mr. Fish's own pleasure. His nursery fields are handled in a different way.



Mr. Fish believes that some of the bush roses are much better if allowed to go their own way than if cribbed and confined in the modern fashion. On his place you will find Frau Karl Druschki ten or twelve feet high, and Gruss an Teplitz almost as tall. The number of flowers produced on these great plants can hardly be estimated. There are hundreds of them all through the flowering season. This plan cannot be extended to all roses, but with a few kinds the results are remarkable. Of course Mr. Fish is particularly fortunate in his location, as the moist climate of New Bedford seems admirably adapted to rose culture. Even the bugs are conspicuous by their absence. Mr. Fish says he does not spray for either bugs or fungus troubles, except with pure cold water from the hose, and yet his plants are nearly always clean and thrifty.

While much can be learned from Mr. Fish in regard to the growing of roses, his methods cannot be followed everywhere, or in respect to all varieties. With most hybrid teas, which require protection, severe pruning must be done every season.

The principles of rose pruning are not summed up in counting the number of buds to leave on strong stems and on weak ones, or in keeping an open centre, in conjunction with a shapely outline. For a certain time, no doubt, these details answer their purpose, but unless young basal growths are forthcoming there inevitably follows a decline both in appearance and flowering. Young growths are a vital necessity in the life of a rose, irrespective of its kind. Without this added youthfulness their presentable days are numbered. The best of culture cannot renew the vigour of old wood. Each year the aim should be to cut away some old shoots to make room for young ones from the base. Never permit overcrowding to retard the development of these, and be mindful to remove all dead wood.

The vigorous growers, of which the variety J. B. Clarke is typical, do best if the old wood is cut out and the new pegged down, as this induces it to break along its full length. With the Pernettiana group very little pruning is necessary, as very often the strong shoots, if cut too hard, die back instead of breaking in the usual way.

The Polyantha section gives the best results when treated likewise, although if merely thinned out they make neat little bushes up to 4 feet high. R. rugosa and similar species only need the oldest wood removed, while the hybrids flower but poorly if

The Scheepers Garden at the New York Show

pruned too hard. The beauty of all the Irish singles is marred if they are pruned too hard. Continuous bloomers, of which the old Gloire de Dijon is an example, must be relieved of their oldest wood first, retaining as much of the young as space will allow, cutting it back to about a third of its length. With recognized climbers and ramblers we are dependent upon the long rods of last season.

---

I had not seen a really satisfactory photograph of the prize garden of Mr. John C. Scheepers at the New York Show until I came across the one which is reproduced herewith. None of the other pictures which have been published have done the exhibit full justice. Even this picture does not make it possible for one to visualize the exhibit in its full beauty, but gives a comprehensive idea of the way in which it was arranged. I believe this garden has done much to awaken the public's interest in spring blooming plants.

---

### THE BOSTON FLOWER SHOW

I remember that the American Rose show held an exhibition in Horticultural Hall in March, 1915. The first thing I noticed upon entering this year was the improved appearance of the hall itself. The rough red brick had been changed into a cream or light yellow, which set off instead of detracting from the beautiful display of flowers placed upon exhibition.

The rose gardens, two distinctive plans, were surely elegant. Such a show makes the beholder think "A rose for every home, and a bush for every garden." The illustrated lectures were attractive and well attended. The growers of all varieties certainly deserve credit for the contribution of exhibits. The orchids, carnations, etc., were delightful to behold. And the satisfaction of having the National Rose Show in Boston was well worth a day's travel to see and to greet old friends.

BENJAMIN HAMMOND.

Beacon, N. Y.

---

Alfred B. Copeland of Springfield, Mass., has brought suit against the inhabitants of the town of Russell for damages amounting to $1,000. Mr. Copeland conducts a greenhouse, which is connected with a service pipe from the town water supply. Through the alleged negligence of the town water commissioners, the water was allowed to freeze in the pipe, thus preventing proper heat being used in greenhouses.

## George Watson's Corner

"You in your small corner and me in mine."

The glass men had a meeting in Pittsburgh April 2nd and decided to cut the price twenty-five per cent. This action was not unexpected, but the heavy holders of high cost stock are hard hit just the same and the worst is yet to come. Unless Congress does something pretty soon there may have to be another cut! Hard luck for the glass manufacturers; but the greenhouse builders look on without that cordial sympathy which one expects in seeing the torture of suffering fellow humans. Aint it awful, Mabel!

---

Men like George Burton, we fear, will be even cold blooded enough to smile. He grows roses and he says the coal men, and the laboring men, and perhaps the carnation men, seem to be having it all their own way. Nothing in it any more for the rose men, which, between ourselves, is only George's way of putting it. The rosarians had their whack, while things were booming, just as well as the rest of them. But they growl when they're hit themselves and perhaps it's only human that they grin a little when the other profiteer gets hit.

---

E. Gurney Hill of Indiana was a recent visitor. He looks well and is as keenly interested as ever in all the trade doings. On his trip East this time, he gave the boys in Baltimore the "once over," and a lecture on roses. There were some five hundred of the elite of the business in the hall to listen. Also the mayor of the city to bid him an official welcome. Certainly those Baltimore lads do things in style. I suppose if they could have resurrected the late Cardinal Gibbons, they'd had him there also.

---

J. A. Petersen of Cincinnati spent a few days with us on his way home from the Boston Show. He is a Philadelphia boy originally, having been on the old Buist place in the seventies. His other name is "Lorraine," and there are some notable improvements on that fine Begonia to his credit. He also takes a keen interest in the Cyclamen.

---

Mr. John Schlotter has purchased the florist business of Charles B. Stowe, at Saugerties, N. Y.

# ADVERTISING AND SELLING

## CO-OPERATIVE ADVERTISING.

Co-operative advertising, if done judiciously and under proper supervision, is beyond question a success. The raising of funds for co-operative advertising, if done judiciously and under proper supervision, is also undoubtedly a success. To the latter, however, must be in a large measure credited the greater amount of failures. Speaking for the florists' business itself, after careful observation for a decade or more in which this has been tried and carried on, we must admit, and we have data to prove it, that the only plan and the most equitable plan for creating a fund for this proposition is the percentage plan. The contribution plan has been tried in dozens of different ways and invariably, after the first year, it began to wane and about the second year dwindled out in every locality where it has been tried, with just one exception and that one cannot hold out much longer. It is now two years old.

On the percentage plan, the communities adopting it and applying it forcefully and judiciously have not only continued on that plan, but they have in each instance increased, and in one case doubled, their percentage. This being the case, there should be no doubt in the minds of the florists of any community that the percentage plan is the only plan under which funds can be collected and the movement kept alive.

We know of many communities who started under the most auspicious conditions on the lump sum contributing plan and each and every one has failer sooner or later. Even the cities, Milwaukee and Chicago and St. Louis, that are now working so successfully on the percentage plan, have for years previous tried various ways on a contributing plan and every one has failed.

Hence, this article is given to those contemplating co-operative advertising as a warning against making the mistakes that so many others have made. Whatever you do, get thoroughly acquainted with the percentage plan. If you are not, write the undersigned or any member of the national publicity committee and information will cheerfully be given you. This is of vital importance to the whole trade. We have now an opportunity to benefit by our past mistakes and by our present achievements. So, let us not waste time and energy on a non-workable plan, but let us unite on a plan that spells "Success," not only now, but for future time to come. No community where there are two or more florists is too small, nor none too large, to make this plan workable.

Don't stand in your own light. Get into the big league.

J. F. AMMANN.

## NEW BOOKS

GLADIOLUS FOR PROFIT, written and published by R. M. Champe, Walled Lake, Mich. Price $1.00.

In this little book Mr. R. M. Champe has given to commercial growers an immense amount of exceedingly val-

uable information. It is not intended to be just for the man with a big acreage, but the grower who is producing gladiooli in small space will find many of his problems solved even before he meets them. The system of planting and cultivation is one easily followed, and young growers will find much help in what Mr. Champe has to say about forcing early flowers for cutting, as well as about packing flowers to ship. Mr. Champe also deals frankly with the best known of commercial varieties on the market and his comments seem to be based on long experience. Altogether it is a little book not to be overlooked by any gladiolus grower who wants to make money from the bulbs or from the flowers.

PRODUCTIVE VEGETABLE GROWING, by John William Lloyd, published by Lippincott, Philadelphia.

This is one of Lippincott's farm manuals and written by a professor in the University of Illinois whose writings have won him considerable credit. The book is a thorough presentation of the subject, dealing systematically with all the more common crops. It will answer most of the questions of the back yard gardener, and some of those which come frequently to the commercial grower. It is also arranged in such a way that it can be used as a school text book.

HORTICULTURE, by Professor K. C. Davis published by Lippincott, Philadelphia.

This is another one of Lippincott's manuals, and is designed especially as a text book for High School and Normal School. At the same time it contains a great amount of information which should be exceedingly helpful to the commercial grower of vegetables and fruits, although necessarily it deals only superficially with many of the processes taken up. It is very well illustrated.

LANDSCAPE GARDENING, by O. C. Simonds, published by Macmillan Co. Price $6.00.

There has long been a demand for a book on landscape gardening which would cover the whole subject thoroughly and reliably, and yet in a way easily understood even to the novice. It seems to us that the need has been met in this book to a greater extent than any other which has come to our attention. While it deals primarily with the laying out of home grounds and the proper planting, including a description of materials, it also takes up the landscaping of farms and the planting of public thoroughfares, railroad station grounds, parks, school grounds and cemeteries. It is not a large book, and only its completeness and the high quality of its material makes it worth the rather high price which is charged for the volume.

PRACTICAL RABBIT KEEPING, by F. L. Washburn, published by Lippincott, Philadelphia. Price $2.00.

Rabbit keeping, especially in a practical way and for utility purposes, has gained rapidly in importance since the war. Both commercial florists and vegetable gardeners are among those who have taken up rabbits as a side line. This is a concise and reasonably comprehensive book, describing the various strains of domestic rabbits and discussing their management and care. What the writer says about purchasing stock is well worth considering.

**A man should never be ashamed to own he has been in the wrong, which is but saying, in other words, he is wiser today than he was yesterday.—Pope.**

**School Gardens** Although less emphasis has been put upon the school-gardens, perhaps, since the war, they still remain a medium of much value, and the committee of the S. A. F. which has school-garden work in charge continues its activities unabated.

There are yet many ratepayers and also many school trustees that point the finger of criticism at school-gardens, because they do not "pay." The same attitude used to be quite common when schools were being supplied with blackboards and wall-maps. The school-garden as a means of instruction; as problems are presented for solution, demanding skill, thought, and constant application on the part of the student, is not yet appreciated. Few men outside of the teaching profession would have the temerity to enter a well-equipped science laboratory and criticise its use as an educational means; but there are many who indulge in the most irrelevant criticisms of the school-garden, failing to recognize in it a means whereby boys and girls are taught not only the rudiments of horticulture, but, what is vastly more important, the fundamentals of good citizenship.

An interesting feature of school-garden work has been the establishment of the memorial garden at Collinwood, Ohio, in memory of 173 children and one teacher who lost their lives in the Collinwood fire. For two years before the district of Collinwood was annexed to the city of Cleveland nothing had been done there and the only suggestion concerning a memorial was for a monument with the children's names inscribed upon it. After the annexation of the district, the curator of school-gardens solved the problem to the complete satisfaction of the people of the district and the school officials by planting a memorial garden. Half of the space is inclosed in a colonnade of Doric columns 12 feet high connected by trellises, with an impressive memorial gateway at the main entrance. A water garden 35 by 50 feet occupies the center and with a sundial and seats add to the beauty of the spot.

**Keeping Customers** Probably there is no business in which re-sale customers are of more importance than the florist business. When a piano or sewing machine or a phonograph is sold to a man or woman, that customer is not expected to come back for a long time. The florist, on the other hand, would make but little headway if he made only one sale to the same person. Transient sales are welcomed, of course, by all florists, but the customers who keep the business going are those who come for flowers week after week, if not day after day. Now this means that the florist's success depends upon the ability of his salesman to hold the goodwill of his customers. All too often one hears a clerk say: "Oh, she got mad, but what difference does it make? She is only one customer." True enough, she may be only one customer, and perhaps only a small buyer at that. Yet the chances are that she has friends who are also customers, and if she tells these friends of bad treatment she has received, she is likely to so influence them that their trade will also go elsewhere.

Courtesy under all circumstances, even the most trying, and sincere desire to please, even though it means a little extra effort, are the fundamentals of good salesmanship, and they are most important in the florist trade. A smile, a few extra steps, a tactful suggestion, may save a customer to the store and not only keep his trade, but help to win that of his friends. To the florist there should be no such thing as "one sale." Every order should be considered as a forerunner of other orders to come, regardless of who the customer may be.

**Trade Journal Advertising** The following extracts from an address by Percival Marshall, Chairman of the British Association of Trade and Technical Journals are worth pondering:

**The Trade Journal** appeals to a specialised set of readers; they are all, or nearly all, directly interested in the goods advertised, and are probable buyers. The advertiser therefore starts out with his publicity battle half-won.

**The Trade Journal** advertiser knows that subscribers to Trade Journals are constantly watchful for new opportunities for extending or improving their business, and that they study the advertising pages as closely as they do the editorial. Every reader of a Trade Journal is also potentially a buyer of goods within the scope of the Trade.

**Many firms have not yet realized** that advertising is a definite factor in their selling organization and should be regarded and developed as such. An advertisement should be considered as being as much a salesman on the staff as the actual traveller who goes round with the order book.

**Every firm has got a selling point,** or many selling points, about the goods it is offering. Yet how many advertisements remain strangely silent on their important facts? Obviously the advertiser does not realize that his advertisements ought to be members of his selling staff.

**The advertiser in a Trade Journal** should be profoundly grateful to the enterprising publisher for providing him with so easy and certain method of reaching his market, but he ought not to let it rest at that. Having his publicity problem half solved for him, he should leave no stone unturned to utilize his space in the most effective manner possible.

# GREENHOUSE ROSES

We make a business of grafting Roses. Perhaps you have known this for years, and yet we want to impress upon your mind the fact that we do this on a large scale and that our product is not a by-product nor the leavings from a commercial planting. Roses for the private grower are taken care of here as they should be. They are put away for you.

We grafted seven hundred and fifty thousand this year and will do more next year.

By the way, "Montgomery's Priscilla" is coming out next season. Next week we will give you some real news. We are going to tell you the right way to disseminate a new rose.

**A. N. PIERSON, Inc. Cromwell, Conn.**

## CHICAGO FLORISTS' CLUB

At the last meeting of the Chicago Florists' Club membership applications were presented from Gustav Bloom, of 11936 Eggleston avenue, Chicago, and Anthony Batek, Schermerville, Ill.

The following were elected to membership: Frank M. Suttle, 225 N. Michigan avenue; Edward L. Martin, 174 N. Wabash avenue; John H. Padon, 318 Center street; W. J. Sharpe, 904 N. LaSalle street; Alec F. Gardiner, 11361 Michigan avenue; Oscar Anderson, Morgan Park.

Mayor W. H. Thompson attended the meeting and addressed the club regarding the contemplated Pageant of Progress. He pointed out that the florist industry was selected as one of the big industries to participate in this movement. It is planned that the florists of Chicago occupy space equivalent to a city block, and the heartiest support of everyone in the trade is expected in this movement. The florists' exhibit in all likelihood will be placed at the main entrance of this great exhibition.

On motion of D. F. Simonds, and duly seconded by Wm. J. Keimel, it was resolved that the Chicago Florists' Club and the Committee of the Allied Florists' Association be empowered to engage space immediately for all branches of the florist industry.

George Asmus presented the Mayor with a basket of roses, and F. Lautenschlager presented His Honor with a basket of carnations.

President Kohout next presented H B. Dorner, Professor of Floriculture at the University of Illinois, Urbana. Professor Dorner has been appointed as a member of the Committee on Horticultural education in connection with the Pageant of Progress, and he stated that there are lots of things we could show in connection with this exhibition.

He said there are many ways of showing the progress made in this particular industry; for instance, by showing the old time method of delivering flowers in the early sixties and seventies, compared to the F T D. service of the present time. We can show progress of modern greenhouse construction by showing a view of some old greenhouse compared to the present houses 80 feet wide. We can also show the progress of heating from the days of the old flue to the present water tube steam boilers. Florists must not say that we can't do it, because we can make this a wonderful exhibition.

It was pointed out that the Flower Shows formerly held at the Coliseum simply attracted people who were interested in flowers; but at the Pageant of Progress this is quite different.

Prof. P. A. Lehenbauer then read a very interesting paper on "What We Are Learning About Plants."

Where the Chicago Pageant Will Be Held

## NEWS NOTES

It is stated that on the first of May Lemoult, the Florist, of 202 Bowery, New York, will be obliged to move, as his building has been taken over by a haberdashery. His retirement from the Bowery will take away one of the oldest merchants in the Spring Street section. Mr. Lemoult has been there so long that he has seemed like a permanent fixture, and thousands of people will miss his flower filled window.

Mr. B. Hammond Tracy has closed his flower shop in Salem, Mass., and will give all his time at present to his gladiolus farm at Wenham.

We will do something worth doing—
that is the resolution for you and me.

## HARTFORD FLORISTS MEET

### Preparations Under Way for the Carnation Convention to be Held Next January

The florists of Hartford, Conn., are already at work making plans for the convention of the American Carnation Society and the National Growers' Association, to be held there next January. At the regular meeting of the Club, Wednesday evening, April 13, W. D. Howard, of Milford, Mass., president of the Carnation Society, was present and, when introduced by Pres. W. W. Thompson of the club, talked interestingly about the work of the organization and its aims. He said that the annual conventions were of much value to the growers, allowing them to compare notes and note improvements in the different varieties exhibited. The January show is to be an unusually large one, because other plants than carnations are to be shown. It is expected that the display of flowers will be in fact one of the most imporatnt features of the convention.

The following committee to have general charge of the convention was then announced: Chairman, W. W. Pierson, Cromwell; W. W. Thompson, J. F. Coombs, J. B. Marchant, Chas. Cawte, W. C. Osborn, Jos. McManus, George Lane, Andrew Welch, V. H. Olmstead, and P. M. Hubbard of Bristol. A hotel committee, consisting of J. F. Coombs and George Lane, was also appointed. It was announced that the headquarters of the delegates will be at the Bond Annex, while the show will be held in the Foot Guard Armory, which is just across the street from the hotel.

Much enthusiasm was shown at the meeting. A representative of the mayor who was present said that the city would be glad to co-operate in making the affair a great success. President Howard remained overnight, and the next day visited a number of florists' establishments around Hartford. At W. W. Thompson's establishment he found some remarkably fine looking sweet peas and violets. It is doubtful if there is any florist in New England whose sweet peas can surpass those of the Thompson place.

Many of the growers said that a shortage of bedding plants was threatened, and all admitted having had a year of very good business.

## AMERICAN ROSE SOCIETY

### Meeting of the Executive Committee—Lectures at Boston Show

A meeting of the Executive Committee of the American Rose Society was held in Horticultural Hall, Boston, on April 7th. Nearly all the members were present, and the guests included ex-Secretary White and Mr. Thos. N. Cook.

After the secretary and treasurer's reports had been read the editor reported that the 1921 Rose Annual had been sent out to all 1921 members.

There was a long discussion in regard to increasing membership, and several directors pledged themselves to bring in twenty-five members each before the middle of the summer.

As part of the American Rose program at the Boston Rose Show, lectures were given each afternoon, as follows:

Wednesday, April 6th—Mr. Robert Pyle gave an illustrated talk on gardens in Europe and America, showing pictures of the American Rose Society test gardens in Hartford, Minneapolis and Portland, and many beautiful pictures of the Bagatelle Gardens in Paris and the Roserie de'l Hay, just outside of Paris.

Thursday—Mr. McFarland spoke on "The Rose in America," with many beautiful lantern slides both of private and public gardens in the United States.

Friday—Mr. Totty told of his trip

to Europe and France last summer and of his visits to the various rose gardens there, comparing conditions with those here and telling particularly of some of the newer roses which he believed to be of value for outdoor planting.

Saturday—Mr. Wm. N. Craig gave a most practical talk on the culture of outdoor roses in New England, giving in detail the steps necessary for success with each class of roses in this particular climate, recommending varieties, methods of planting and the combatting of insects and diseases.

Sunday—Mr. B. S. Letson, Boston, spoke on flower arrangements in the home, illustrating with cut roses which had been supplied for the occasion by Mr Roland, and which were afterward distributed among the audience.

Great interest was manifested in all the lectures, the attendance averaging about two hundred.

At the suggestion of the Massachusetts Horticultural Society the Rose Society had show cards recommending varieties suitable for planting in New England. These cards were placed in the entrance hall and attracted great attention throughout.

JOHN C. WISTER, Secretary

## WABAN ROSE CONSERVATORIES TO BE SOLD

Francis G. Goodale, receiver of the Waban Rose Conservatories, of Natick and Wellesley, Mass., has advertised that the properties will be sold at public auction, May 9, at 3 o'clock in the afternoon. In addition to the greenhouses, the sale will include 60,000 growing rose plants, together with tools, implements and supplies.

## GARDENERS' AND FLORISTS' CLUB OF BOSTON

The next meeting of the Gardeners' and Florists' Club, of Boston, will be held Tuesday, April 26, it having been postponed from last Tuesday. It is expected that there will be many unusually good exhibits at this meeting. The principal speaker will be Mr. B. F. Letson, of Carbone's, who will talk on flower arrangement. A. S. Jenks will be present to speak in behalf of the Massachusetts Horticultural Society, as the club is to aid in extending the membership of the association.

## SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS

The mailing of prints of the floor plan of the Convention Hall in Washington has just been completed. The plan covers the whole of the second floor of the building, which is most admirably adapted for the Trade Exhibition. As will be seen on reference to the plan, there is not a column, pillar, or other obstruction on the floor to interfere with the arrangement of the exhibits. Applications already received for space would seem to indicate that the trade displays will be even larger than those at the Cleveland Convention, at which all records were broken.

The space rental remains the same as in previous years—sixty cents per square foot. The cost of the official sign, including the rental of an upright, or stand, is $3.00. Rule XXV of the Rules Relating to the Management of the Trade Exhibition, reading, "The selling of goods by persons or firms not having engaged space will be prohibited, unless such person or firm shall have secured a permit or license from the secretary, the same to cost not less than $35.00," will be strictly enforced, so that none other than exhibitors will be permitted to transact business on the floor until the license or permit mentioned has been obtained from the secretary.

Membership cards will shortly be issued to all members in good standing, and such members will be required to present their cards at the entrance to the hall. The work of the secretary's office will be greatly facilitated if members who have not paid their dues will make remittance now. It might be mentioned again that, at the annual meeting of the Executive Board held in Washington last January, a resolution was passed authorizing the dropping of the name of any member from the membership roll for non-payment of dues after one year.

### The Membership Drive

The drive for increased membership directed and supported by the Executive Board is about to commence. Complying with the board's resolution, President Roland has appointed the following committee to take charge of the drive: Chairman, J. F. Ammann, Edwardsville, Ill.; Joseph H. Hill, Richmond, Ind.; S. S. Pennock, Philadelphia, Pa.; A. L. Miller, Jamaica, N. Y., and Paul R. Klingsporn, Chicago, Ill. It will be the purpose and object of this committee to double the membership in the Society before the date of the coming convention, and

about 3,500 names, and it is the earnest wish of the officers and directors to see this number increased to 7000, which is but a nominal number when it is considered that there are upwards of 20,000 florists in the country. Our Society bears the brunt of battle against all movements detrimental to the interests it represents, and, accordingly, must have strength of support to back it up.

The following have each guaranteed to secure the number of members stated with their names: Thomas Roland, Boston, (10); John Young, New York, (10); J. J. Hess, Omaha, (10); Joseph H. Hill, Richmond, Ind., (10); C. C. Pollworth, Milwaukee, (10); Herman P. Knoble, Cleveland, (11); Paul R. Klingsporn, Chicago, (10); J. F. Ammann, Edwardsville, Ill., (10); Henry Penn, Boston, (10); George Asmus, Chicago, (10); A. Rasmussen, New Albany, Ind., (10); W. A. Rowe, Kirkwood, Mo., (10); Robert L. Graham, Jr., Baltimore, (10); I. S. Hendrickson, Flowerfield, N. Y., (10); Wallace R. Pierson, Cromwell, Conn., (10); Frank H. Traendly, New York, (10); Thos. H. Joy, Nashville, Tenn., (10); Alfred M. Campbell, Philadelphia, (10); W. H. Englehart, Memphis, Tenn., (10); W. F. Gude, Washington, D. C., (10); A. Gude, Washington, (10); Joseph Kohout, Libertyville, Ill., (12); Carl Hagenburger, W. Mentor, O., (10); John Canning, Ardsley, N. Y., (5 life).

## WINTER FLOWERING BEGONIAS

Mr. James Marlborough, gardener for Thomas E. Proctor, of Topsfield, Mass., who made a remarkable showing of 43 varieties of the winter flowering begonia at a recent exhibition, has written a short bulletin on the culture of these begonias for the Massachusetts Horticultural Society. He says:

"After flowering the plants are placed where they get some light and a temperature of 55°. They should be kept moderately dry until about the first of March when most of the old stems will have fallen off and the young growths will have developed from the axils of the leaves. Following the directions of the Messrs. Clibran, when these new growths are about 2½ to 3 inches in length they should be taken off as cuttings, inserted singly in thumb pots, and placed in a propagating case or in a close house in a temperature of 70°.

Many of them have very small tubers and the old stem should not be cut off too near the crown; better

When Writing to Advertisers Please Mention Horticulture

let them fall off, which they will do as the new growth starts. When they show new roots they should be potted into small pots using a light sandy mixture of loam and leaf mold in equal parts and placed in a temperature of 60° at night. Do not syringe the plants or water them overhead but keep the house moist. Fumigate about once a week, somewhat stronger than with other plants, to prevent insect pests of which the mite is the worst.

These will make good flowering plants in the autumn, but for large exhibition plants it may be necessary to start leaf cuttings in November in the same way as with "Gloire de Lorraine." In this way many of the varieties can be grown to specimens three to four feet in diameter in one year.

### PLANT REGISTRATION

Public notice is hereby given that Henry J. Doll, Wankuck Greenhouses, Providence, R. I., submits for registration the new plant here mentioned.

Geranium, Mrs. Hattie A. Doll, Seedling, parentage unknown. Plant a strong grower, and free and early bloomer. Zone in leaf very distinct. Height 18 in. Color glowing scarlet. Flowers single, 30 to 35 to a large cluster. Single florets 2 in. in diameter, with five large petals.

Any person objecting to this registration, or to the use of the proposed name, is requested to communicate with the Secretary at once. Failing to receive objection to the registration, the same will be made three weeks from this date.

## DR. L. H. BAILEY'S
## Standard Cyclopedia of Horticulture

Six large quarto volumes. More than 3,600 pages. 24 full page exquisite color plates. 96 beautiful full page halftones. More than 4,000 text engravings. 500 Collaborators. Approximately 4,000 genera, 20,000 species and 40,000 plant names.

**IMPORTANT NEW FEATURES**

**KEY TO IDENTIFICATION OF PLANTS.** This is a device to enable one to find the name of a plant. The name thus found is quickly referred to under its alphabetical location, where full information will be found in regard to it.

**SYNOPSIS OF PLANT KINGDOM.** This is one of the most important features of the new edition. It constitutes a general running account of the classes, orders, and groups of plants, with a brief sketch or characterization of 215 of the leading families comprising those that yield practically all the cultivated plants. These family descriptions give the botanical characters; the number of genera and species and the ranges; a list of the important genera; brief statements in regard to the useful plants; and diagrammatic illustrations.

**ILLUSTRATIONS.** There are 24 colored plates; 96 full page half-tones; and more than 4,000 engravings which serve as guides in the text.

**THE GLOSSARY.** This is an analysis of all technical terms that are used in the work and in similar works. It comprises botanical and horticultural terms with brief definitions.

**TRANSLATION AND PRONUNCIATION OF LATIN NAMES.** In Volume I is inserted a list of between 2,000 and 3,000 Latin words used as species—names of plants, giving the English equivalent or translation and the pronunciation.

**CLASS ARTICLES.** Special effort has been made to secure the best cultural advices for the plants requiring peculiar or particular handling. Here are some of the titles of these articles; Ants; Autumn Gardening; Bedding; Diseases; Drainage; Floral Designs; Formal Gardening; Hotbeds and Coldframes; Insects; Landscape Gardening; Lawn Planting; Orchards; Rock Gardening; Subtropical Gardening; Tools and Implements; Village Improvements; Window Boxes, etc.

**GENERAL INDEX.** The final volume contains a complete index to the entire work, enabling the reader to locate volume and page of any subject he has in mind.

WE ARE MAKING A SPECIAL CASH PRICE FOR THE COMPLETE SET OF $41.00

## GARDENERS' AND FLORISTS' CLUB OF BOSTON

At the last meeting of the Gardeners' and Florists' Club of Boston, the principal speaker was Mr. B. F. Letson of Carbone's. Mr. Letson talked on flower arrangement, and gave much interesting and valuable information to the one hundred or more members present. Mr. Letson has made a specialty of flower arrangement and has given his lecture before several organizations.

Six new members were admitted to the club as follows:

Marion Roby Case of Weston.

Harry Coles of South Natick.

W. H. Kleiner, of 70 Patten St., Forest Hills.

John Peterson of Bedford.

Paul D. Schlichting of Chestnut avenue, Jamaica Plain.

John Robinson of Woodman avenue, Chestnut Hill.

The death of Frederick C. Green, superintendent of parks of Providence, R. I., and a member of the club, was announced. W. N. Craig, Robert Cameron and Julius Heurlin were appointed a committee on resolutions.

Mr. A. R. Jenks appeared in behalf of the Massachusetts Horticultural Society and enrolled several new members. The club gave a vote of thanks to Mr. A. C. Burrage for his work in behalf of horticulture.

A number of interesting exhibits were made at the show. They included Darwin tulips, shown by Walter Golby; Calceolarias, shown by William Reoch, gardener for Mrs. N. M. Bryant of Waltham; Primroses, shown by Andrew Priest of Chestnut Hill; Hydrangea Otaska, eighteen varieties of Narcissi and Chrysanthemum Morning Star, shown by W. N. Craig, and carnations shown by James Donald of Hingham.

## NEWS NOTES.

At the next meeting of the Gardeners' and Florists' Club of Boston, President W. H. Judd of the Arnold Arboretum will speak on "New and Desirable Trees and Shrubs."

Charles Isselee, the nurseryman of Darien, Conn., has opened his new place of business; he has put up a new greenhouse and has a very attractive location.

John S. Stewart, a veteran florist of Anderson, Ind., passed away recently at the age of seventy-one years. He had been in business at Anderson for thirty-four years.

James Reddy, a prominent florist in Greenpoint, New York, has moved to a new store on Dalyer street.

## THE TALK OF THE TRADE

When I called lately on the Budlong Rose Co., in Rhode Island, I discovered something interesting in respect to the Dunlop rose. There has been some complaint from growers that this rose is inclined towards mildew. I doubt, however, if it is a trouble that can't be overcome if growing conditions are well taken care of. However, the point I had in mind that I ran across at the Budlong Range was a very peculiar one. A long house with three beds, I believe, was planted to this rose, and there were three different distinct lines showing where the grafted and the own-root plants come together. Each bed had part of each, and the mildew stopped absolutely at the line. It didn't lap over and disappear gradually, but the grafted plants showed mildew while the own-root plants were entirely green and in a much more vigorous state of growth. Mr. Budlong states that the house was planted with plants in about the same stage and condition, and knows of no reason at all why one should show mildew and the other not. It's a fact, however, and may well be worth following up.

---

I don't think there is much question that grafted plants are better than own-root on most all varieties. I hear some growers say that they are unable to see any difference between grafted and own-root plants on Columbia, but I have never been able to find an instance where own-root stock did better than grafted except in the case of one or two of the yellow sorts which died off at the graft. If the graft united properly that stock would do better than own-root. So, as I said, the Dunlop rose shows the first clear cut case of own-root stock being superior to the grafted stock that has come to my attention.

Mr. Budlong is a decided believer in grafted stock. Consequently his idea that Dunlop is better on its own roots must have been very forcibly shown to him, or he would not pay much attention to it. Of course this is only in the early growth of these plants. He has not been able to decide definitely what the ultimate result will be,

Exhibit of Thomas F. Galvin, Inc., at the Home Beautiful Show in Boston

as they have been planted only about six weeks. The trouble may be eliminated later on, but it looks bad now.

---

The Home Beautiful Show which was held at Mechanics Hall, Boston, for two weeks, was a decided success from the point of view of attendance. It is reported that no show has ever been held there that called in larger crowds or where more interest was shown, not even in the days of the old food fairs. For a show to remain open and remain crowded for two weeks, and with all the bad weather that Boston has had during those two weeks, shows that the public supported it in fine shape. I visited this show several times, and each time became more firmly convinced that the florists had missed an opportunity for good advertising. I won't say just how it might be done, except that if there was a committee in Boston to look after such opportunities they might well have arranged some sort of an exhibit to show the good uses of plants and flowers in connection with the home. An exterior of a dwelling with window boxes or plantings on the lawn, I think, would have worked out nicely, and I believe that the florists could have worked very nicely in harmony with the cottage which was set up in this show, showing interior arrangement in the way of furniture, fittings, kitchen outfit, as well as hangings and decorations in general. A few flowers placed around properly inside would have helped the effect in the interior and been good advertising as well.

---

Thos. F. Galvin, Inc., had space on the second floor nicely arranged with the particular idea of showing artistic dinner table decorations the day that I visited their exhibit. They had a very attractive and nicely set up exhibit, and it would appear to me to have been very well patronized by the public.

I don't think there were quite so many uses made of palms, hydrangeas, roses or pot plants in general at the various stands as there should have been. The exhibitors were probably not encouraged or gone after in the right way to use natural plants. It was disappointing to me to see so much artificial stuff. I couldn't help but remember the shoe show, I believe it was called, last year, when Thomas F. Galvin, Jr., went after the different exhibitors and succeeded in practically filling Mechanics Hall with live plants and flowers. He did well, and this show suffered by comparison, at least in the eyes of the florists.

There is one new introduction in bedding plants that to my mind has not received anywhere near the attention it deserves. I had been rather careless about it myself, but when I really had a chance to see a block of Ageratum Fraseri, it made a great impression. To begin with the individual flowers are larger than any of the other ageratums, at least any that I have seen. And the color is as fine as could be possible. I don't know any better way of describing it than calling it a true forget-me-not blue. This plant is dwarf in growth, and I am informed by those who have tried it out that it is a continuous bloomer and a free, rugged plant in growth. Mr. H. B. Greene, of Lowell, Mass., was so well impressed with this ageratum that he was one of the florists to take advantage of it and work up a good big stock.

---

Apparently this is proving a remarkably good season for the nurserymen. In a recent conversation with Mr. E. F. Coe, of the Elm City Nurseries, at Woodmont, Mr. Coe said that his shipping department was still overwhelmed with orders, the indications being that before the season closed he would have doubled his last spring's out-put.

"This is a surprise to us," continued Mr. Coe, "as we anticipated a slow down in sales this year owing to the general state of labor conditions. On the contrary, however, the public has been buying more freely than ever. Civic beauty and the utilization of gardens for fruit, berries, etc., seems to have become a uniform point of view throughout the country." We were glad to have Mr. Coe say also that in his opinion the Market Development Committee of the Nurserymen's Association was doing good work in arousing a desire for garden material and in promoting its sales.

---

H. V. Lawrence, of Falmouth, Mass., is a florist who knows how to make the most of his opportunities. From a horticultural standpoint he is all things to all men. I mean by that that he meets practically every need that any of his customers may have. To begin with, he has an attractive retail establishment, with greenhouses attached. Visitors are welcome to walk through the greenhouses and inspect the large and varied stock. Just back of the office are rooms given over to the landscape department, for this is another feature of his business which is being rapidly developed. Mr. Lawrence has found that many summer people and permanent residents, both on the Cape and on the nearby islands, like the idea of laying out their gardens in a systematic way, and according to recognized rules.

After a stay of several years in the west, his son, Milford Lawrence, has been put in charge of this branch of the business. And then in order that his customers may have their orders for plants filled promptly, he has laid out a nursery close to the greenhouse, although fronting on another street. In the spring great numbers of trees and shrubs are purchased from the growers and heeled in where they can be found at a moment's notice. With this practice, there is no waiting when an order comes in, and Mr. Lawrence's customers evidently appreciate his quick service.

In order that the nursery department shall give good value, it is being made to advertise the business. A long walk beneath rose covered arches leads from the street on which the nursery faces the whole length of the plot and around the corner to the greenhouse itself. This is a striking feature of the lay-out and attracts much attention.

At one side of the greenhouse is a plot containing many trees, and here Mr. Lawrence's plan is to lay out immediately a miniature woodland with paths and appropriate planting. This will be in a way a sample of what can be done on other estates on the Cape. I might say in passing that the landscape and nursery end of the business has grown so fast that Mr. Lawrence is now planning the erection of additional buildings to take care of it. When this addition has been completed, the greenhouse and florist department will be kept by themselves. Now much other work has to pass through the office because Mr. Lawrence also handles seeds and fertilizers for the benefit of his trade.

Mr. Lawrence's methods seem admirably adapted to towns like Falmouth, which are at some distance from any large center of population. By such methods practically all of the purchasing done by a gardener may be made with the florist as the medium. Some items must necessar-

**SUMMER COURSE IN HORTICULTURE**

Practical work out of doors forms a large part of the schedule. Teachers will be especially interested in this course. Circular upon application.

ELIZABETH LEIGHTON LEE,
Director.

ily show little or no profit, but the customer is kept from going elsewhere, and in the long run leaves much surplus cash in the till.

It was very pleasing to me to see such a fine lot of Dunlop roses as I found at Stevenson Bros., of Towson, Md. I have seen good Dunlop grown by several of the larger rose men, but the Stevenson boys have only a small place, with all good types of houses, but not such a great quantity of plants to select from. Nevertheless, it will take a fine lot of roses to beat a vase that the Stevenson boys can put up from their stock. Their Dunlop carried big heads, fine green foliage and the color was wonderful. When that rose is good it is mighty good. Their Premier was also exceptionally well done. To tell the truth, it's only fair to say that they are A 1 rose growers in every way, and I think that any rose that can be done at all will be done well by these boys.

Some weeks ago in this department a curious mistake put the name of Robt. Pyle under a cut of S. S. Pennock. It was a good cut, and a very pleasant reference was made in the story to Mr. Pyle. It is a pity that text and picture didn't match. I hope both estimable gentlemen will forgive the unfortunate error, which I greatly regret.

## SELLING FLOWERS ON CREDIT

### An Efficient System Worked Out by Schiller of Chicago

H. Dieu Schiller, the well known florist of Chicago, has worked out a remarkably effective and successful credit system, according to an investigator for the Retail Public Ledger.

Mr. Schiller has long since sworn off form letter duns and collection agencies and he shuns litigation, since the small amount of the average flower bill in a home neighborhood is not worth the expense of a lawsuit. A bill contracted during one month is mailed at the first of the following and if no check is received within thirty days, a second bill is sent. If, after five days, this is not effective, the Schiller credit system gets into full swing. The telephone man calls up the delinquent customer—for phone numbers are always taken with orders—and delivers a courteous reminder in the form of: "Our delivery man will be in your neighborhood today. Would it be convenient if he should call for the amount of your bill?" In most cases the matter is arranged and the collection is made by one of the Schiller chauffeurs on his rounds.

When the first phone call fails to bring results, the credit man does not hesitate to repeat it, three times a day if necessary and without apology, though with due politeness and care in the handling of touchy customers. In the end this persistence reaps its reward, for the bad debts of the concern amount to only one-eighth of 1 per cent.

The real items that make up the total cost of the Schiller credit system include salaries for the telephone man, two office girls, two regular chauffeurs and several delivery boys, as well as the cost of stationery, ledgers, and other bookkeeping paraphernalia. These amount up to about $7000 annually. To this must be added the losses arising from adjustments—for credit customers take advantage of their position to exchange plants ordered over the phone and their good will is valued too highly to admit of dispute in doubtful cases. So, with the overhead, the expense of the system easily reaches the $10,000 mark.

Ten thousand dollars a year for running a retail business on credit may appear to be wild extravagance. As a matter of fact, it represents the most careful and far-sighted economy, since the business, if run on a cash basis, would, according to its owner's candid admission, go to the wall in a month, for a home neighborhood demands credit and the great majority of the orders come in over the phone, sometimes rapidly enough to keep three phones busy at once.

This means that not only the credit system but the service must reach the highest point of efficiency. As almost every order is delivered, the problem of delivery alone, complicated by the perishable nature of the stock, must be worked out in most careful detail. Every plant or bouquet delivered is tagged with a separate order number, which also appears in the chauffeur's list of names and addresses to be visited on one trip. A carbon copy of his list is filed in the office, where it may be consulted in case any one calls up to satisfy himself that his order was safely delivered, for many orders are sent as gifts, and as no bill can be attached, the only way to trace them is through separate order numbers.

## NEWS NOTES

Trepel, the florist of Brooklyn, N. Y., is to occupy the store being vacated by D. L. Wilson, at 95 Main street.

The suit to break the will of Julius Niednagel, a florist of Indianapolis, Ind., has been set for re-trial. At the first trial the jury disagreed. The Niednagel estate is valued at $100,000.

John V. Gerd, a resident of Astoria, N. Y., and for 20 years in the florist business, died recently at the age of 63.

Professor C. S. Sargent, director of the Arnold Arboretum, Boston, recently observed his eightieth birthday and received many hearty congratulations.

### GREENHOUSE ROSES

In the American Rose Annual for 1921 Mr. Wallace Pierson of Cromwell, Conn., discusses the cut-flower situation as it appeals to him. He says among other things:

"Quarantine laws have affected to some extent, but not seriously, greenhouse roses for cut flowers, unless it be true that Europe intends that Manetti stocks for grafting must make up for their export of outdoor roses. From $8 per 1,000, in 1914, to $70 per 1,000, in 1921, is considerable of an increase and if the nursery syndicates who set these prices in Europe persist in asking beyond reason they will make a quarantine more drastic than "37." America can produce Manetti, and will do so, and this sort of encouragement given to the 'infant industry' by French, English, Dutch and Irish nurserymen will be all that is needed to bring about abundant production.

"There has come into the big markets during the past few years a notable difference in what is required in cut roses. In years gone by, the long stemmed or "special" rose was wanted by the market and in those days the price was, in many cases, much in excess of the price brought by the same grade today. Our markets of today want twelve to twenty-four inch stems, with heads in proportion. The average fifteen-inch rose is the standard grade, and for extra-long stems it is hard to realize a premium that makes the production of this special stock popular with the producer.

"Given an average market calling for an average quality, the question of variety must enter seriously into the planting plans of the grower. Briefly let me review today's roses:

"PILGRIM. Rather capricious as to habit of growth. Likes to be grown cool, say 58 degrees for a steady diet. Rose-pink in color, and much brighter when full grown. Much likely to suffer from black spot when grown cool, and much better in color. Exceptionally fine in many places.

"CRUSADER. Not very good in color. Most crimson roses turn blue when old, and are not very good color when they are heavy growers. This is the nature of crimson roses, and Crusader is no exception. It is the best paying rose for the grower, and yet not over-popular with the public. The best crimson rose in commerce until someone gets something better.

"MME. BUTTERFLY. A bright-colored Ophelia sport, and the best of them all, from the producer's standpoint. It grows stronger and flowers more freely than the parent. Good roses for grower, wholesaler, retailer and the consuming public.

"OPHELIA. Still good and widely known.

"ROSE PREMIER. The best dark pink, and very widely grown.

"COLUMBIA. Shares with Ophelia and Rose Premier the honor of being the most universally popular rose in America.

"DOUBLE WHITE KILLARNEY. Still at the top in white roses.

"MRS. AARON WARD. This dainty yellow rose is almost alone. Sunburst, grown in limited quantities only, leaves 'Ward' the yellow rose of commerce.

"MY MARYLAND. A warm-weather rose, but a market variety that has made money for the grower and will make money, due to its wonderful flowering ability.

"MILADY. Go West to see it right, there Milady leads the list of red and crimson roses. By the way, it seems to be coming East, and will no doubt be welcome.

"THE SPECIALTY ROSES. Hadley, Francis Scott Key, Sunburst, American Beauty, and a few others are grown in limited quantities for special markets and need not be considered in sizing up greenhouse roses as a whole.

"Let us look ahead for a short space: Montgomery grew 3,000 seedlings last year. From them, Priscilla, a big, long-budded, pink rose, will be offered for 1922. In Rotarian, Miss Amelia Gude and Freedom they have others of promise. These were raised by Lemon. The E. G. Hill Company's rose, Hill's America, deserves the name. It looks the part, and they are to be congratulated on it. I understand that 1923 will see it in commerce.

"Robert Scott & Son have a big pink seedling, Mrs. Prentiss Nichols, to offer in 1922, and there may be others to make their appearance, from all tales we hear of the beautiful light pink sports of Premier, the rainbow-colored Ophelia sports, and the Columbia sports of which there are legion, from pink to crimson in color."

---

Arnold Janiten and Ernest Kunan of Arlington, Mass., well known florists, have been sued by Mrs. Catherine Woods of Winchester, who alleges that she was poisoned by a primrose plant purchased from them and asks for $10,000 damages.

## GROWING ROSES UNDER GLASS*

By Anthony Ruzecka

When growing roses use a good sod taken from any soil that will grow a good corn crop, laid up into piles, with from ¼ to 1/3 good cow manure, in alternate layers, in the fall a lighter soil requiring less, a heavier soil more, the compost to be thoroughly chopped down and mixed before filling into benches. At this time apply to a bench 150x4 feet, thirty pounds of either 16% acid phosphate or fine ground bone meal. Both are good and the price usually governs as to which is used. The bench is then ready for planting.

Every grower should try both grafted and own root of each novelty, unless for some reason the introducer advises otherwise, as under some conditions grafted and own root do equally well, under others either may prove superior. This should be determined by each grower for himself. Usually grafted plants will do equally well the first year, but be much better as they get older. I have seen them six and seven years old, and still very profitable. In buying plants a grower should be particular where he buys so as not to bring into his place some disease, which it will take time and money to eradicate. If doing his own propagating he should avoid all weak and sickly plants, also the best bench on the place is none too good for young stock. Grafted stock, unless grown on a large scale, can usually be bought cheaper and better, as the average grower has not the special facilities required for this work.

### Varieties Selected

Here the grower must be guided by the market to which he ships, as popular taste varies. Every grower should keep records of the number of plants of each variety he grows, also the daily cut and the money value of same. By this means he at the end of the year can know which variety is paying him, so that he can increase or decrease his plantings accordingly.

Unless a grower does this, he is only guessing at his results. Also a grower must adapt himself to his own local condition of soil and greenhouses. Many establishments have houses in which roses cannot be grown profitably in the winter. If these are used for summer roses, and rested in the winter months, they will be found to be profitable indeed, if judgment is used in selecting varieties grown.

Roses vary so as to temperature requirements that only general rules can be given. Sudden changes should be avoided. Night temperatures of 58-60 degrees, with no ventilation, suit the general run of roses. With temperatures of 62-68 degrees varying to correspond with amount of ventilation used. Days when you have watered heavy or syringed keep a little on the warm side. Days when the houses are on the dry side they are better a little cooler. Day temperatures—Cloudy days 66-70 degrees, sunny days 72-78 degrees, varying between these as houses are wet or dry, or depending on outside weather conditions.

The grower must be guided by the condition of his plants, also by his soil. But as a general rule a plant that is full of growth and healthy in a soil where the drainage is good, more harm is usually done by not enough water than too much.

The common diseases of roses can best be prevented by proper culture. In case of black spot by spraying or mildew painted on the steam pipes with sulphur, both used as preventives. In case of Aphis or green fly any of the nicotine papers, properly used with control. Thrip is best controlled by spraying the tops of the plants with brown sugar and paris green in solution. Crown gall or canker, burn the stock infected as soon as possible and do not use the soil over again as it also is infected unless first sterilized. Meanwhile quarantine the house that has it. Club root or nematodes, where prevalent, can be prevented by sterilizing the soil used or growing grafted plants, or not taking upland soil, using only lowland soil which is under water for several weeks each year, as this will be found free of it.

Where it can be had manure water is one of the best methods of feeding, as plants can actually be given just what feed they need. Only one precaution to be observed—never water dry plants with it, water these first with clear water.

Let each grower take a bench 150 feet long, divided into six equal parts, use a different mixture of fertilizer

in each part, also keep an accurate record of production. He will then in a year or two acquire a practical knowledge of his soil requirements as to fertilizer which he can get in no other way trying out all the standard materials, as very often a high-priced material when judged by results is much the cheapest.

A modern icebox is also a necessary adjunct, as there is no use in growing good stock, if you cannot take proper care of same afterwards. In shipping and packing and handling roses, be guided by the advice of your wholesaler, as he knows from personal contact what the requirements of his particular market are.

Under the present prices of coal, only an efficient heating system should be used. If you haven't one the quicker you make a change, the quicker you will save money. Any of the greenhouse construction companies have experts who will be glad to call and suggest such changes as are needed.

In conclusion, the modern rose plant with its big iron framers, efficient heating system, and economical working conditions, has a big handicap on the old fashioned plant where conditions are usually the reverse, so it behooves a grower who would keep up to date, and meet this competition, to remodel his plant and bring it in line with modern conditions. He can get some very good ideas along these lines by visiting some of these modern places and by consulting the trouble men of the greenhouse building concerns.

Also by all means give our young men a thorough commercial education. This, combined with the practical knowledge gained by experience, will equip them for the keener competition which they will have to face.

## CHARLES F. BOYLE MARRIED

A recent wedding, which has caused much interest because of the groom's prominence in the florist trade, was that of Charles F. Boyle, president of Thomas F. Galvin, Inc., of Boston and New York, to Miss Margaret E. Collins of Arlington, Mass. Miss Catherine A. Collins, sister of the bride, was maid of honor, and Joseph F. Donnelly of Somerville was best man. A wedding breakfast and reception followed at the bride's home, 17 Linwood street. After a wedding journey the couple will make their home in Brookline.

## NEW BOOKS

ENCYCLOPAEDIA OF PRACTICAL HORTICULTURE, published by Lowman & Hanford Co., Seattle, Wash. Price $16.85.

These four volumes will be found very useful by everyone engaged in outdoor occupations. While not designed especially for the florist, it has a department in which the principles of floriculture are discussed in an expert way. The book also deals with the practical cultivation of fruits and vegetables, as well as with agriculture in general. The encyclopaedia will be found very useful as a reference book, and is evidently intended for use in Agricultural Colleges and Experiment Stations as well.

# RAMBLING OBSERVATIONS OF A ROVING GARDENER

I have been interested in some seed packages just received from the Julius Roehrs Co., of Rutherford, N. J. These packets show much originality and should please and gratify the firm's customers, for they are both useful and ornamental, even after the seeds have been removed. The envelopes are printed in different dainty colors and carry in large plain type the name variety of the flower. When run through short sticks, and these sticks are also supplied by the concern, they form garden markers which are most attractive. Incidentally, directions for planting the seeds are given on the backs of the envelopes so that they are doubly useful. It was a happy thought on the part of the Roehrs people to put out these unique and unusual envelopes.

---

The more I think about the display of native orchids which Mr. A. C. Burrage staged at Horticultural Hall, in Boston, the more I am impressed with the remarkable character of that exhibition. Its conception was little less than an inspiration, and it was carried out with an attention to detail which has set a new pace for horticultural societies throughout the country.

It was, of course, the most unique show of the kind ever made in this or any other land. In fact, nobody else, I suppose, ever has thought of getting together such a collection of native orchids, at least on such a large scale. And surely the idea had never been conceived of bringing the woodlands, the bogs and the meadows into a hall so that the plants might be seen just as they grow under natural conditions. It was a big undertaking, and a costly one, no doubt, yet Mr. Burrage was well repaid, I am sure, by the record breaking attendance, and by the extreme interest and apreciation shown by those who went through the hall. The attendance itself was a big surprise, for in spite of the inclement weather the crowds were so big on Sunday that a new exit had to be cut through the woods in order that the people might pass out more easily. Really, the crowds were too big on that day to see the flowers to advantage.

The show was well advertised, and Mr. Burrage did a thoughtful act when he sent thousands of invitations to school children. The children came, too, with their teachers, and the pleasure which they found in the show was reflected in their eager faces and shining eyes.

It isn't necessary to mention in detail the different native orchids shown. Not only were they there by the hundreds, but they were remarkable for the size of the clumps and the number of the flowers borne. It must have taken weeks of patient search to find the plants in the first place, and after they had been located, they had to be carried to Beverly, where they were frozen and set away in cold frames until taken in to heat and forced for the show. Mr. Douglas Eccleston, the superintendent, and his assistants, had to figure more or less in the dark as to the length of time which would be required, and in a few cases the flowers were not ready in time. For the most part, though, the figuring proved exact. Perhaps the fact was not commonly realized, but here, flowering at

MR. A. C. BURRAGE

**Azalea Poukhanense at the Arnold Arboretum**

the same time, were plants that naturally opened their blooms over a season running all the way from April to September. It is not surprising that gold medals were awarded to Mr. Burrage and Mr. Eccleston.

If I am not mistaken, what Mr. Burrage did in this instance is only a forerunner of other big undertakings along somewhat similar lines. Mr. Burrage has become exceedingly enthusiastic in his efforts to preserve the wild flowers of New England, and I believe that future generations will owe him a great debt for his work along this line.

### EARLY BLOOMING AZALEAS

On April 23rd the first Azalea flowers in the Arboretum opened on the Korean Rhododendron yedoense var. poukhanense, better known as R. poukhanense, which last year was in bloom on the 10th of May. It is a very hardy shrub widely distributed in Korea from the neighborhood of Seoul southward, and grows generally in open pine-woods and on grass-covered slopes where it forms dense mats rarely more than three feet high, although in more shaded positions it is occasionally as much as six feet tall. Here in the Arboretum in full exposure to the sun it forms dense mat-like bushes from two to two and a half feet tall and three feet or more in diameter. This Azalea is perfectly hardy in the Arboretum where it first flowered in 1914. The flowers are clustered, with a rose or rosy purple corolla, and are more fragrant than those of any other Azalea in the Arboretum collection. The color of the flowers does not harmonize with that of other Azaleas which bloom at the same time, and the plants are therefore best kept away from other Azaleas. Azalea yodogava (Rhododendron yedoense), which in recent years has been sent in large numbers from Japanese nurseries to the United States and Europe, is a double-flowered form of the Korean Azalea.—Arnold Arboretum Bulletin.

Mastica is elastic and tenacious, admits of expansion and contraction. Putty becomes hard and brittle. Broken glass more easily removed without breaking of other glass than occur with hard putty. Last longer than putty. Easy to apply.

### CULTIVATING WILD FLOWERS

There are some of us who visit our gardens as a lady visits a florist's. Some friend is to lunch with her and she wishes a few flowers to decorate her table. There are others who wish a pretty effect of flowers in their gardens through the summer. There are still others who like to work and fuss among their plants as a mother works among her children in the nursery, watching their different traits and idiosyncrasies. To such as these the cultivation of plants brought in from the fields and woods has its special fascination.

We seem to do almost creative work among these plants for they change their character under our fostering care. It was a proud day for Hillcrest when its first award came from the Massachusetts Horticultural Society for exhibiting a little anemone nemorosa which in our garden soil had grown so that there was a pretty little rosette in the center of the white-petaled flower. Hepaticas, too, had responded to our care so that we have been able to force them into bloom in our cold frames, and this spring among the mauve and white hepaticas growing by our wood road is a beautiful rose-colored one. The little dicentra cucullaria grows larger in our garden than in the woods, and the dicentra formosa begins in early spring to flower and keeps in blossom through the summer.

Some plants are shy to bloom in strange places. The arbutus likes its own abiding place. Some sods of this which had been sent me from New Hampshire did well till this spring when there were few flowers among their leaves. We need to study the ways of the wild flowers to have success with them. For this reason we feel that many people will be interested to know of the opportunity they will have to question Mr. Kenneth W. Gillett in his talk on The Cultivation of Our Native Flowers on Saturday and Sunday afternoons, May twenty-eighth and twenty-ninth, at Horticultural Hall at three o'clock. Anyone familiar with the catalogues which Mr. Gillett and his father have been sending out from their Wild Flower Garden in Southwick, Massachusetts, will feel that Mr. Gillett will be able to answer the questions they want to ask him. For in this catalogue we are told what plants require dry soil and which do better when planted by a brook. He also tells us whether they need half shade or sunshine.

We hear much today about protecting our wild flowers. When we learn

many items will be out of the market just when you want them. So why not get our Bulletin right now—a postal card with business address will bring it—and you must be interested in the following:

APPLES, a general list—good kinds too.
PEARS, big quantity Bartlett. Also other varieties, 3 yr. old. Fine for retail trade.
DWARF PEARS too, at right prices.
PEACHES, take no back seat in growing this item. Lots of Elberta, Carman and J. H. Hale.
ORNAMENTAL TREES, Norway, Silver and Ash Leaf Maples, from 6 ft. up to 15 ft. high.
EVERGREENS, about cleaned out, except Arbor Vitae—a good quantity from 12 in. up to 6 ft.
CHERRIES, not long on—mostly sour varieties.
AMPELOPSIS VEITCHII, strong 2 yr. grade. Also Seedlings at very low prices.
ORNAMENTAL SHRUBS, you should see our list before you buy.
ROSES, Climbing and H. P., a long list of scarce kinds.

Please let us hear from you if you want SERVICE and GOOD STOCK this Spring.

### NATIONAL PUBLICITY CAMPAIGN

The Publicity Committee is at the present time concentrating its attention upon plans to continue the national advertising as soon as possible. The slogan "Say it with Flowers," as all know, became pretty well established through the first three years of our campaign, becoming an asset to the trade of very considerable worth. This asset should not be jeopardized, hence the committee's desire to resume magazine advertising at the earliest possible date.

The committee believes it due to the subscribers that the sums paid into the campaign fund be publicly recorded, therefore hereafter will furnish the trade papers regularly with lists of subscribers, with the amounts actually paid into the fund, instead of the amounts of subscriptions guaranteed. Such a list is now sent to the trade press, showing total receipts since January 1st last, amounting to $21,525. Bills are going out to subscribers who are delinquent in respect to their guarantees, and the committee urges that remittances be made to the secretary without delay. Nothing but the need of funds is holding the campaign back, and it is not believed that those who are in arrears want to hamper the work.

It might be pointed out that, although the sum mentioned as received since January 1st is rather large, it should be remembered that it had to be drawn upon to meet obligations incurred by the committee in connection with the last advertising, and also to clean up the contract made for billboards. The latter expense, however, forms an asset which will be realized upon to the full, as billboard sales work off the stock on hand. When all are disposed of these will be live advertising in force of inestimable value, and which has cost the campaign little or nothing.

Incidentally, it may be said that another effort is to be made right away to get personally in touch with prospective subscribers. J. Fred Ammann starts about May 8th on a trip to cover fifteen of the largest cities in the west, with the idea of forming in each allied florists' associations to cover district territory, which will engage in publicity work and turn in to the national campaign fund a liberal portion of the subscription collected,

for national publicity, using the remainder for local publicity. This plan has already been tried, and with success, associations already formed in Chicago, St. Louis, Buffalo, New York and Portland, Ore., contributing a percentage of their funds to the national movement.

### National Flower Show

The guarantee fund covering the Fifth National Flower Show, Cleveland, 1922, is nearly complete, only about $1000 more being required. The following are additional subscribers to the fund, which now amounts to $18,962:

| | |
|---|---|
| Previously reported | $16,297.00 |
| Elmer J. Weaver, Ronks, Pa. | 50.00 |
| Wm. L. Rock Flower Co., Kansas City, Mo. | 200.00 |
| N. B. & C. E. Stover, Terre Haute, Ind. | 100.00 |
| Jerry Brookins & Son, Orchard Park, N. Y. | 100.00 |
| Schloss Bros. Ribbons, Inc., New York City | 250.00 |
| Schiller The Florist, Chicago, Ill. | 500.00 |
| Hugh S. Will, Minneapolis, Minn. | 200.00 |
| Hammonds, Beacon, N. Y. | 150.00 |
| Feltons Jr. Flowers, Inc., Cleveland, Ohio | 50.00 |
| H. Plath, San Francisco, Cal. | 100.00 |
| B. Katzwinckel, Medota, Ill. | 10.00 |
| R. Witterstaetter, Cincinnati, Ohio | 100.00 |
| S. A. Anderson, Buffalo, N. Y. | 100.00 |
| Wm. N. Craig, Brookline, Mass. | 100.00 |
| Joseph Traudt, Canajoharie, N. Y. | 100.00 |
| Chas. Schwake & Co., Inc., New York City | 100.00 |
| Perez S. Burr, Freeport, Me. | 5.00 |
| Valentin Burgevin, Inc., Kingston, N. Y. | 100.00 |
| Hentz & Nash, Inc., New York City | 250.00 |
| J. F. Anderson, Short Hills, N. J. | 100.00 |

The secretary has prepared a floor plan covering the area set apart for the trade exhibits, and copies of it will be distributed very shortly. It must be borne in mind that the space rental, $1.75 per square foot, will include railing, background, and the official sign. It is the idea of the committee to have the exhibits at this show uniform in appearance to enhance the decorative effect of the show. At other shows the irregular appearance of the trade exhibits has greatly marred the beauty created by the competitive exhibits, resulting in criticism which should not be forthcoming at any show inaugurated by florists.

Considerable interest is already shown in the competition for the Grand Capital Prize, several entries already being promised. At the next meeting of the committee, regulations as to dimensions of exhibits will be decided upon, and opening and closing dates for entries fixed. It is expected that a meeting of the local executive committee will be held in Cleveland within the next two or three weeks, at which the chairman and secretary of the National Flower Show Committee will be present. Much important business will be transacted at this meet-

**Memorial Day.** All indications point to a successful Memorial Day trade. In spite of the fact that business conditions are badly upset the public continues to buy flowers with a persistency that sometimes surprises even the florists themselves. Perhaps the campaign of publicity which has been carried on for the past few years is bearing fruit to a greater extent than is commonly realize. Perhaps the revulsion from the war-time strain is still being felt. Whatever the cause, the demand for flowers remains remarkably good, and the florists are reaping the benefit. While stocks are more plentiful than a year ago on the whole, some growers find themselves with fewer plants than a year ago. For example, we were told only a few days ago by R. Vincent, Jr., and Sons that they have less stuff to offer just now than in any previous year at this time. In fact, they are entirely sold out of some varieties.

Memorial Day will probably see many more outdoor plants ready than is usually the case. The early season in some sections has brought them along several weeks ahead of the average date. Indeed, there seems to be a possibility in New England that the lilac will be gone by May 30, although the cool weather of the past week has held them back.

Mothers' Day trade was reasonably good, but varied greatly in different sections. In some cities this event has assumed considerable importance, while in other places it is allowed to pass almost unnoticed. Much depends upon the way in which it is advertised.

**Special Advertising.** Whether any special occasion like Mothers' Day or Memorial Day is to prove a success from the viewpoint of the flower merchant lies mostly with the trade itself. Of course a certain amount of business will be obtained without any special effort, but if these occasions are to prove as profitable as they can be made, there must be intelligent and concerted advertising on the part of producers and retailers alike. It will not do, either, for one branch of the trade to sit tight with the hope or expectation that some other branch will do all the work and meet all the expense, and yet let them slip in on the profits. If there is anything which demands cooperation all along the line it is in putting over a publicity campaign. It would seem that the Western cities have been more progressive along this line than those in the East, but the latter are gradually waking up. Providence, R. I., a city which contains a great number of growers and retail florists, but is sadly lacking in organization, is making the experiment this year of going into the papers on special occasions. If we are not mistaken, W. A. Bowers has been the leader in the movement. At any rate the trade was lined up for an excellent display in the photogravure section of the Providence Journal previous to Mothers' Day, and we understand that larger copy and with a different setting is to be used for Memorial Day. "Progressive Providence" is too good a slogan for the florists of that city to lose sight of. With organization and proper cooperation they can do much to stimulate their business.

After all, though, the practice of advertising only on special occasions is not a good one. As the growers are likely to point out, they can get rid of their stock on such occasions without much difficulty anyway. What they seek is a way to dispose of their stuff when the market is dull and a surplus accumulating. The answer is still advertising, but handled in a different way. There is no reason why a demand cannot be stimulated at any time, if the right methods are followed. And that is what the industry needs—methods which will cause people to buy when the market is normally dull, and yet without breaking the market to such an extent that difficulty will be found in getting reasonable prices later on.

**Coat Flowers.** Florists are happy to note the returning popularity of the boutonniere. Much has been made of Pres. Harding's alleged promise to wear a white carnation throughout his term of office. Whether he made any such promise or not, the newspaper reports will have a tendency to induce a freer use of buttonhole flowers. Across the water the Prince of Wales has revived the fashion of wearing flowers in the buttonhole, and if the florists' associations in both countries are alert enough to get paragraphs in reference to this matter into the society magazines and to have buttonhole flowers displayed attractively in the windows of the retail florists, there is no reason why the demand for carnations, roses, bachelor buttons, etc., on the part of men should not make rapid growth.

**Notes in Passing.** H. D. Schiller of Chicago is a florist who has learned how to collect his bills. He has worked out a scheme which seems to approach perfection and is to be congratulated. There are localities where a florist business has to be done almost entirely on the credit system. And those are the localities where collections are usually hardest. Yet if they can be made promptly, profits are sure to be good. Mr. Schiller's methods are worth studying.

We do not know anything about the Flower Lovers' Club of Santa Clara County, California, but it would seem to be such an organization as florists would like to see established in every community. According to a statement of the president of the club its objects are to promote the use of cut flowers, as well as potted plants, in hotel lobbies, public and private offices and in business show windows generally. The objects are most worthy, we must all admit. May more clubs of this sort be formed.

# "Montgomery's Priscilla"

That's the name of the new pink rose! The name will be "Priscilla" probably after the public has had it a while, but we have had to add the prefix to cover the rules of nomenclature.

In order to get someone who knows more about roses than we do to give an unbiased, honest opinion on the merits of this rose, we have placed 12 plants of it with each of the following rose growers:

E. G. HILL CO., Richmond, Ind.
DAILLEDOUZE BROS., Brooklyn, N. Y.
ALBERT H. AMLING CO., Maywood, Ill.
DUCKHAM-PIERSON CO., Madison, N. J.
ROWAYTON GREENHOUSES, Rowayton, Conn.
MILLER FLORAL CO., Farmington, Utah
WELLWORTH FARM GREENHOUSES, Downers Grove, Ill.
A. S. BURNS, JR., Spring Valley, N. Y.
ROBT. SIMPSON, Clifton, N. J.
CHAS. H. TOTTY CO., Madison, N. J.
NOE-RUZICKA CO., Madison, N. J.
WM. H. ELLIOTT CO., Madbury, N. H.
ANTHONY RUZICKA, Madison, N. J.
W. J. PILCHER, Kirkwood, Mo.
JOS. HEACOCK CO., Roeloffs, Pa.
WENDLAND & KEIMEL, Elmhurst, Ill.
JOY FLORAL CO., Nashville, Tenn.
ROBERTS ROSE CO., Denver, Colo.
GEO. C. WEILAND, Evanston, Ill.
LAKEVIEW ROSE GARDENS, Jamestown, N. Y.
BASSETT & WASHBURN, Hinsdale, Ill.
HARRY O. MAY, Summit, N. J.
F. R. PIERSON, Tarrytown, N. Y.
L. B. CODDINGTON, Murray Hill, N. J.
JOS. H. HILL CO., Richmond, Ind.
STEPHEN MORTENSEN, Southampton, Pa.

Ask them about it, if you will, at any time. They have our permission to tell the truth. We are going to let this rose sell itself! We shall be simply order takers.

A. N. PIERSON, Inc. Cromwell, Conn.

## BUSINESS CONDITIONS DISCUSSED

### Arthur Niessen Talks to the Lancaster County Florists' Association

At the last meeting of the Lancaster Co., Pa., Florists' Association, Arthur Niessen, of Philadelphia, was the speaker. He opened his remarks with "What's the matter with our business?" answering the question with "Nothing." He said in brief that we should be more than satisfied with our business when we stop to compare it with other lines, using as illustrations the large lines of leather, which had a surplus of 32,000,000, all of which had disappeared in 18 months; copper, with an income tax of between two and three hundred million, now none; farm products, the price of which has been cut in two.

"No such conditions exist in the florist's business," he continued, "as fortunately for us our stock is perishable and has to be disposed of as produced, leaving no surplus of high priced merchandise on our shelves to be disposed of at a loss.

"Our prices today are in a healthier condition than previous to the war, high enough to legitimately take care of the increased costs of production.

"In nearly all lines of business today there are men being laid off, shops working part time, while we are adding to our working forces and increasing, rather than decreasing, our production, and not decreasing the pay of our employees. This fact will go a long way to take us out of the 'non-essential class,' where we were relegated during the war.

"The increase in glass area for the past year has been low, only 5%, but idle greenhouses were again put into use and production increased. Every month of the past year, excepting February, showed an increase in business over the year preceding it in the Neissen establishment.

"Without any increase in the glass area which is not needed, increased production should be followed up by every grower and the waste places which are found in almost any establishment be made to produce good stock. Good stock always sells; it is the poorer grades of stock that keep the market price down in a wholesale way.

"Bulbs the past Easter were badly overdone owing to the fact that the bulb men loaded up everyone to full capacity, many men who never grew bulbs going into them heavily. Others with a market for 500 planted 50,000, the result naturally being a loss, where if the grower had consulted with his commission man this loss could have been averted. Side lines for specialists are not usually a good thing as they are often neglected and the result is a lot of poor stock that helps break the market.

"After producing stock the next thing is to sell it and the way to sell it is to advertise. Advertising without unity is of little value. The grower, who is at present supplying about 80% of the money used for this purpose, should have more of a voice in the spending of the money. When flowers are plentiful the public should be made aware of this fact, so that customers who got a very small lot of flowers at Easter for ten dollars would know that they could now get just as many or more for half to one-third of that amount. When flowers are scarce and higher priced, use facts in your advertising, telling the public the amount of coal, labor and care it takes to produce the flowers and the public will respond with their trade.

"Co-operation in selling is not possible as supply and demand will govern the market every day of the year. The store man and the street fakir are going to buy as cheaply as they can, and the grower who is wise will help with his money and his counsel in creating a market for his products, the same as the California orange men have done with their Sunkist oranges. Some years back Gardenias were coming into Philadelphia in quantity and the stores did not push their sales, so that in self-defense the commission men had to put them out to the street fakirs, with the result that Market and Chestnut streets were lined with Gardenias. In a few days the store men were clamoring for them to supply the demand from their better class of customers."

A rising vote of thanks was tendered Mr. Neissen for his very valuable talk.

### THE IRIS

**Some Present Favorites and the Future Prospects**

By Sidney B. Mitchell, California.

Should I be asked to make a selection of a dozen thoroughly good, yet not so very expensive, tall bearded irises, it would probably include Pallida dalmatica, still unsurpassed; Juniata, a taller, darker, and very graceful pallida; Mandraliscae or Violacea grandiflora for a darker blue; Iris King, all things considered, the best gold and brown; Prosper Laugier, a brighter squalens than Jacquesiana and an equally good grower; Jeanne d'Arc, the best lightly fringed plicata; Quaker Lady and Eldorado, two free-flowering blends, particularly attractive in association; Archeveque, a rich red bi-color very given to fall as well as spring blooming in California; Isoline, in spite of its shy blooming and its poor summer foliage; Caterina, a good grower with fine flowers here; and, least to be omitted, the giant Alcazar.

Among such later novelties as I have seen I have several favorites. Shekinah's pallida growth and fine pale lemon-yellow coloring are all that is claimed for it and establish a new standard for yellows. Avalon in its combination of fine size, shape, substance and color is not equalled and I am glad to be able to report as well that it is proving a fine grower here. This and Madame Durand are the best new irises I saw last season, but they do not compete, as the latter is a Ricardi hybrid, of very tall, branched growth, with huge flowers somewhat like a pale Eldorado, a striking and unusual color. Leverrier, also a Ricardi hybrid, of very tall, branched growth, with huge flowers somewhat like a pale for California, but are not likely to do well in sections where Caterina does not grow and flower well. This is also true of Lady Foster, which I much prefer to Crusader, and of the tall Kashmir White, which in California is far superior in every way to such albino variegatas as Innocenza, White Knight, or La Neige.—American Iris Society Bulletin.

### DEATH OF MRS. PERCY R. RIGBY

We regret to announce the death of Mrs. May Fort Rigby, wife of Percy B. Rigby, vice president of the S. S. Pennock Co., and manager of the New York office. Mr. Rigby has the sympathy of the trade in his loss.

## George Watson's Corner

"You in your small corner and me in mine."

"For he knew the world was round,
Ho! Ho!
And he knew it could be found,
Ho! Ho!
That geographic, haughty, hoary
Navigator gyratory—
Cristopher Colombo."

Something like the foregoing is the chorus of a lively little ditty we have often heard sung in convivial gatherings, and hearing them again recently, they suggested the following rambling paragraphs:

---

What happened twenty-five years ago is in some ways a little thing and yet, in many ways, often interesting. For instance, on a June day, 1893, we find the lineal descendant of Columbus (who discovered America) sitting in Philadelphia and telling the boys that Columbus was a farmer, and that, up to the present minute, his successor, also, was a farmer. At that time we

were all very much interested. But how many of the present generation get a chance to think of these fine glimpses of the past. For their benefit we will quote the Duke's remarks as he gave them to a gathering in Philadelphia on the occasion of his visit:—

"It gives me great pleasure and it is indeed an honor to the descendants of Columbus to meet here today such distinguished persons who so well represent the City of Brotherly Love that is one of the greatest centers of wealth, industry and commerce, of your wonderful country, and at the same time the cradle of its independence and of all the liberties of the American people. The kind welcome of the Farmers' Club has been very delightful to me, because I also am a farmer, doing my best to increase the wealth of my native land. You may rest assured that though the sad moment of leaving America approaches for me I have learned to admire you so much and highly that though I may leave, my heart will remain with you."

So, when we think of old Christopher, it is well to remember that he was not only a great navigator but a farmer also, and I have no doubt that if he were alive today he would be a florist also, and an enthusiast in the American Rose Society. J. Horace MacFarland would be after him right away and would treat him with much more consideration than old Queen Isabella did. And if one of Columbus' descendants comes along soon again there will be more than the Farmers' Club and men like A. J. Cassatt and George W. Childs and the rest of those farmers, to do him honor.

What was happening twenty-five years ago—well, say—we think we are live and progressive today; but they also were the lively bunch then, believe me! John Burton with his "American Belle"; Edwin Lonsdale with his "Helen Keller"; Tom Galvin with his "Lawson," and all the lesser lights following suit—believe me—it was

some live arena. Of course, that is all past history now but the point I want to make to the boys of the present day is—come on—now it's your turn—go them one better.

On the whole, I think the boys are doing it. They have marked the hole their fathers set, and, starting from that, I can see many noticeable advances in various parts of the country, and from many given directions, all of which lead to the upward and onward in the development of horticulture.

The rose men, especially, have been keeping themselves in the forefront and leading the floral procession in magnificent style. The grand exhibitions they have been giving us in recent years have been an incentive to the upward and onward, and of great value not only to the trade but to the general public. Their literature also has been of a high character and of great value. The latest edition of the Rose Annual (1921), which has just reached my desk, is the best yet—and that is saying a good deal for the previous editions for many years have been of a very high character. Those who wish a copy of the new book—it is a finely illustrated volume of 192 pages—should write at once to John C. Wister, secretary American Rose Society, 606 Finance Building, Philadelphia, for full particulars, before the edition gets exhausted.

There are splendid articles by experts from all over, numerous beautiful plates of roses and rose scenes, etc., and fine portraits of those two great old rose heroes—Gurney Hill and John Cook. If for nothing else than mementos of those two, the book is worth its weight in gold for all who know the men.

C. H. Macubbin is the grass expert at Dreers. When you want to find out any fine point about St. Augustine or any other little known native grass species from Maine to California, from the North Pole to the Equator, the archives are there ready to hand, the accumulation of a lifetime's experience. And all freely and cordially extended. When in doubt, see Mr. Macubbin. No matter if it is Palm Beach or Bar Harbor—you can have a good lawn in either, if you only use the right species. And, believe me, you don't learn all that in one day. It takes a lifetime.

Harris & Lever have purchased the Arthur L. Jones greenhouse at Tonawanda, New York, and will expand their business.

## IRIS PRICES IN AMERICA AND EUROPE

In the April number of The Flower Grower Mr. John C. Wister has an explanation of the difference in price between iris plants in this country and abroad. Mr. Wister says:

"It is true that prices in this country have always been relatively higher on account of the great cost of growing, chiefly due to the high prices paid unskilled nursery labor, but the discrepancy in prices is now particularly marked because foreign importations are practically cut off by Quarantine 37.

"As a member of the Committee opposed to the quarantine, I have repeatedly shown that the chief result of Quarantine 37 was that of a protective tariff to the growers, and it is for that reason alone that most nurserymen uphold the quarantine.

"In a statement dated February 25th, Dr. C. L. Marlatt, Chairman of the Federal Horticultural Board, denies all the charges brought by our Committee and states that only amateurs are opposed to Quarantine 37, and that all horticultural and nursery interests appreciate the need of this quarantine. He neglects to state they uphold it for reasons not at all connected with plant pests, but for the reason that they can charge higher prices to the public.

"It is true that the iris may be and is being brought in under special permit with more success than other classes of plants, which are more difficult to ship, but the quantities coming in are so small that prices will remain high for a long time.

"As to the varieties mentioned especially in your article, some of them, like Black Prince, Caterina and Crusader, will remain high in this country for a long time, because they are poor growers, and therefore the stock

multiplies slowly. Other varieties, like Lord of June, are increasing in price, notwithstanding the fact that they multiply rapidly, because the demand has been much more rapid than the increase in plants.

"This state of affairs will undoubtedly continue and be very harmful to the spread of gardening in this country. On the other hand, it must be remembered that unless the nurserymen can sell plants at a profit they will not continue to grow them."

## MARKET

This has been a growers' market and the growers have made the most of it. Mothers' Day demand was keen and top notch prices were charged. The public grumbled a little and some of the retailers complained, but, nevertheless, the demand cleaned up all the stock. In Boston carnations sold at .15. Sweet peas, although not very good, sold quickly at from $1 to $3 per hundred. Snap Dragons were plentiful but in good demand at from $1 to $2.50. Roses have sold from .08 up. A few Peach Blossom and Blushing Bride gladioli came into the market the past week. Lilies have been in good demand, not so much for the Mother's Day market, however, as for church use, especially in the Catholic churches, and the prices varied from $1.50 to $3.00, according to the demand on the special day.

With Mother's Day out of the way florists are looking confidently ahead to Memorial Day. The dark weather has been holding things back but a week of sunshine should have most of the stuff in good shape for the holiday.

**We Want More Shippers**

# "The More Expensive It Gets To Build A Greenhouse The Cheaper It Is To Build A Good One."

As a parting shot to one of Fritz Bahr's recent bits of philosophy in The Florist's Exchange were used the words of this advertisement's title. Haven't the pleasure of knowing Fritz, but he sure has the corn-fed brand of common sense.

When materials were low, it didn't amount to so much when a cheap house went to pieces and had to be replaced. But, with today's costs, it would mean a lot of money. But that isn't all—the present price of cypress is such that an all cypress house actually costs close to what one of our Half Iron Framers does.

Because of exactly the same reason, The Half Iron Frame costs but little less than The Full Iron Frame. So the man who puts his money into a poor construction pays a high price for the privilege of buying something of short life; when a little more added to the expenditure would give him a permanent house and a lasting investment.

The more expensive it gets to build a greenhouse, the cheaper it is to build a good one. You know we go anywhere for business, or to talk business.

## DEFENDS THE FLORISTS

### Elijah S. Gorney Explains the High Prices of Mothers' Day Flowers

In Boston as elsewhere the newspapers had much to say this year about the high prices charged for flowers on Mothers' Day. It remained for Elijah S. Gorney of Houghton Gorney to make a satisfactory explanation and defense. In a letter to the Boston Telegram he said:

"The grower tries his hardest to have a full crop for the special holidays, such as Christmas, Easter Mothers' Day and Memorial Day. The coming of the crop depends a good deal on the weather. If we have continuous dull weather, (as was the case of the 10 days previous to Mothers' Day) the crop does not materialize, resulting in a scarcity of flowers; and as the prices in our business are wholly regulated by supply and demand, naturally the prices are higher than when we have sunny bright weather.

"Furthermore, a grower that grows carnations or roses 10 months in the year cannot cut many more than his regular cut on any day regardless of holidays. Flowers grow, whereas other merchandise is manufactured. We cannot grow additional lots for special days.

"In order to satisfy the demand growers sometimes keep their flowers on the plants for a week previous to the holiday, and as these do not last very long after they are cut, they are sold to second and third-class florists, leaving all the best grades for the first-class stores.

"The above gives you part information from a grower's standpoint, and the following is the retailer's point of view. We paid from 16 to 20 cents each for carnations, buying them by the thousand. When you consider the overhead expenses of a retail establishment, do you consider 25 cents each (which was the price in our store) too much, considering the perishable nature of our business?

"The retailer makes less gross profit when flowers are high than when they are low, as we try not to discourage flower buying with unfair prices.

ELIJAH S. GORNEY."

Boston.

## NEWS NOTES

Florists at Waterbury, Conn., supplied all the gold star mothers in that city with flowers gratis on Mothers' Day. It was a graceful act and one which won much commendation. One paper suggested that in the future the city itself should honor its gold star mothers in this manner.

## THE TALK OF THE TRADE

I wonder how many florists have adopted the plan which I recently saw being worked out at the establishment of Myron Ford, in East Weymouth, Mass. Mr. Ford's greenhouse is near a cemetery, and he does a big Memorial Day business. Help isn't overabundant on this plant, though, and in former years he found it difficult, both for that reason and from lack of flowers to meet the eleventh hour orders for bouquets. Now he starts making up pans of growing plants several weeks before the date on which they will be needed. These pans are of several sizes, the small ones selling at $1.50 and the largest ones at $3.00. In some locations probably more could be obtained for them, but there is a profit at these prices. The plants used are whatever happens to be on hand, small begonias, heliotrope, palms, vinca, coleus, etc. These pots of plants look very attractive and sell readily. Many people prefer them to cut flowers, realizing that they will last much longer. Possibly the idea has been adopted by many other florists. In any event, it seems to be a good one for greenhouse men whose Memorial Day orders are heavy.

At Mr. Ford's place I also saw a splendid crop of snapdragons. At one time it seemed as though disease was going to make it impossible for florists to continue with this excellent plant, but there seems to have been little trouble experienced this season. Mr. Ford told me that his snaps were as clean as they ever had been. When well grown and in good variety, this is a flower which always makes ready sale, and is useful in many ways. One of the finest varieties on Mr. Ford's benches was the new Golden Pink, put out a year or two ago by Mr. G. S. Ramsburg, of Somersworth, N. H. This is a splendid variety, both as to color and length of stem, as well as general habit of growth. Ramsburg's Yellow on another bench near by was also making fine growth when I visited the house. The future of snapdragons seems to be as bright as it ever was.

When it comes to originality in advertising, most of us must take off our hats to Mrs. Sara Coombs Martin, manager of the Coombs Flower Shoppe, of New Haven, Ct. Mrs. Martin was associated with the Coombs Hartford store for fifteen years before her marriage, and in the few months that she has had charge of the New Haven store has developed a business sense which is characteristic of the Coombs family. In her advertising work she has the valuable co-operation of her husband, and almost weekly a new window setting is staged which might well be studied by any of the big city florists who think they know all about window dressing.

Mrs. Martin is quick to take advantage of every opportunity offered, and when she learned that a Mary Pickford film was to be shown in New Haven early in May, she evolved the plan of making a Mary Pickford window and selling the Mary Pickford Maybaskets. The window was handsomely decorated, and contained a table where a figure representing Mary was seated. Inside the store were a number of handsome girls with Mary Pickford costumes, who handled the baskets of flowers. The window made a hit at once, and a great many customers visited the store, buying not only baskets but other flowers as well.

Mrs. Martin has found it very advantageous to advertise and feature Saturday specials. She has greatly increased the popularity of the store and its sales in this manner, and yet without cheapening her goods or cutting prices. The Mary Pickford idea

A Typical Coombs Window

was simply characteristic of her methods.

Mary Pickford films are being shown all over the country, and there is no reason why other florists should not adopt or adapt the idea in their own towns.

---

Of course the Hartford reputation of the Coombs had already reached New Haven when the store of which Mrs. Martin is in charge was opened in November last, but the proprietors themselves were amazed at the end of the opening when they checked up and found that 10,000 visitors had viewed the attractive store and display and that 6,000 chrysanthemums had been given away at the opening.

One feature of the New Haven store which attracts the attention of visitors is the color scheme. It is decidedly original, being worked out in black, pink and gold, the woodwork being done in a pink that mellows into a most delightful old rose glow. The store abounds in arches and alcoves, and of course the old type of counters is entirely missing, the flowers being displayed on tables which are painted a jet black, and placed here and there about the main sales room or in the alcoves. Some one has remarked that this store of Coombs might well be called the Fifth Avenue Flower Shop of Connecticut, and the phrase is a happy one, for few Fifth Avenue stores are more attractive to the eye or more conveniently arranged for purchasers and salespeople alike.

---

Each year many of the buyers who have to go after geranium plants in 4-inch pots during May and June predict that they are going to have an easier market, but this year finds them facing a tougher proposition than even last. I believe that today that anywhere through the East geranium stock is very scarce. From all I can see 20 cents is a low price, and I do not think there is any doubt that there will be a possibility of moving a big quantity from now into the middle of June at most any figure. Thirty cents does not seem to be too much. That is, of course, for good 2½ and 4 inch stock of good varieties. It is particularly true that Ricard and Poitevine are short.

I wonder how long it is going to be before the growers will get busy and produce enough geranium stock to take care of the good trade that is going around begging for attention. Every one knows mighty well that when geraniums sold at $8, $10 and $12 a hundred there was no profit, but I believe that now a grower would not need to fear going into geraniums heavy in good varieties and putting his prices to where they belong to give him a good margin.

I know of an instance where a retail customer was offered 100 good 4-inch plants of mixed geraniums at 35 cents. There was another lot of 4½-inch, better stock it is true, but not a great deal better, but when these were offered at 50 cents it was the 50-cent stock that was taken up. It only goes to show that it is not so much a question of price as it is being able to get good stuff.

---

The early yellow chrysanthemum which W. R. Nicholson of Framingham, Mass., is offering the trade this year is without doubt a valuable variety for the commercial florist. There is nothing to look to as an early yellow excepting Golden Glow. Of course this sort can be had at any time from Aug. 1 to Oct. 1 and even later. But it is by no means an all-around satisfactory variety.

The grower never feels sure of how this variety is going to act with him from one year to another. It cannot be said that it is a poor sort or that it is not a money maker when well done, but it is sort of gambling with fate to go into it very heavy, as those few bad habits which it has are apt to return a small percentage of good bloom if everything does not go just right. For instance, a spell of dark and damp soft growing weather results in a lot of damped off flowers. The stem is inclined to show a bad, lanky neck and it is not the easiest thing in the world to get the foliage of dark color.

With Nicholson Yellow Frost a grower has a chance of bringing in his crop of yellow mums as early as the market is good. It is an easy one to grow and it is not necessary to say much more. I know of no real bad points about variety. And the color is a good golden yellow. This variety is being planted heavily by those growers who have been fortunate enough to know just how good it is. It is well worth trying.

---

W. A. Hastings is fortunate in having as fine a lot of Formosum lilies coming to him in the Boston Flower Exchange as one could ask to look at. DeVita's conservatories of Wakefield, Mass., are sending in regular shipment and they are fortunate, too, in having such fine stock at just this time. It is coming just right for Memorial Day and will move at a good figure. It has been selling for some little time past at prices ranging from 20 to 30 cents. I believe that Formosum lilies handled properly and brought in in steady quantities so that a grower can be depended upon would prove a profitable crop. Mr. DeVita has a plan of growing these lilies that I consider a very good one. They are planted right into the soil and thereby handled without the waste of room and extra labor that there would be if they were flowered in pots.

---

If there is any grower who has good, big Dracaena plants in about 5- or 6-in pots, I would not advise him to advertise them, because the office staff would suffer from writer's cramp, turning back and refusing orders. It would not be long before his stock would be taken up, regardless of how much he might have. They certainly are in heavy demand and no price seems to be high enough to scare the buyers. It is a case of get them at any price.

---

I find that plant growers in general are meeting with good results in forcing some of the greenhouse roses as pot plants. Such a variety in particular as Francis Scott Key is giving mighty good results. Ophelia and Double White Killarney are also good. The stock used is generally benched plants that have been forced through the winter for cut flower purposes, dried off and cut back on the benches, lifted about this time in the season, potted into 5-in. pots and carried through the summer in cold frames where they make a good ball of roots and good plump wood. This wood properly ripened in the Fall responds readily when it is time to force as a pot plant in flower.

---

A few days ago I had an opportunity to look over some thousands of the new dwarf seedling begonia, "Betty Farr." I was greatly impressed with the merits of this plant. While it has been considered most commonly as a plant for growing under glass, it seems to have all the merits required for a bedding plant. The plants are remarkably uniform in height, bear very profusely and continuously. The flowers are semi-double or double, deep cerise, and it seems to me that the plant should be of exceptional value for bedding in parks and cemeteries. The superintendents will lose an excellent opportunity if they do not acquire a stock of this begonia.

The plant was originated by Mrs. Farr of Stoneham, Mass., who for some years past has been sending an excellent stock of cut flowers to the Boston market. For some time she has been propagating this new begonia, and when she exhibited it at

the Horticultural Show in Boston, and at a meeting of the Gardeners' and Florists' Club, it attracted no little attention. People in the trade who have visited Mrs. Farr's place have been greatly impressed with the outlook for this plant. It seems ideal for potting, and, as I have said, for bedding out.

No one familiar with the florist trade who visits Plymouth, Mass., should think of coming away without calling on Mr. Charles T. Stevens, who has a store in the center of the city and greenhouses a short distance away Mr. Stevens is one of the best known florists in New England. In his early years he was a railroad man, but gradually picked up a big business in Mayflowers, in which Plymouth County formerly abounded. At one time he had as many as forty people picking flowers for him, and he sold thousands of bunches in Boston, dealing with men like Henry Penn and the Robinson Brothers, when they were just beginning their successful business careers.

After a while Mr. Stevens erected a greenhouse and became a regular florist. Now he has a pretty range of houses and grows a vast amount of stuff, being assisted most capably by his son, who is especially skilled in handling carnations. The young man says that the carnation which pays him best is Enchantress Supreme. At the same time he has grown other kinds, of course, and is making a start with both Laddies and Mr. Strout's Maine Sunshine. With the exception of roses, Mr. Stevens grows about every kind of stock which is needed for his trade. He makes a specialty of bulbs, making large importations every season and forcing them in a house reserved for that purpose and fitted up with a special heating apparatus.

One way in which Mr. Stevens turns into dollars bulbs which many florists waste is worth speaking of. On one side of the road beyond the greenhouse is a banking, and here are planted out all the hardy narcissi after they have finished blooming under glass. They thrive and multiply with almost no attention, and as a result great numbers of flowers which cost nothing to produce are obtained for the market. Mr. Stevens is a keen business man and overlooks no opportunity to make a dollar. At the same time he spends money freely when it will bring results, and because of his ever present smile and genial nature, he is welcomed wherever florists congregate.

## Men I Like To Meet

Julius Heurlin

Whenever and wherever you meet Julius Heurlin you are pretty sure to find him with a smile on his face. Perhaps that is one reason why the Massachusetts Nurserymen's Association made him president of that organization at its last meeting. At any rate, it helps to explain his popularity inside the trade and out.

For the past 17 or 18 years Mr. Heurlin has had a nursery in South Braintree, Mass., located not far from the Blue Hills, which have given it the name of Blue Hills Nursery. Before that Mr. Heurlin helped to establish a nursery at South Framingham, Mass., and before that again he had spent much time on large estates across the water, being for two years orchid grower for the Rothschilds.

He is a Swiss by birth, and has traveled over much of the world, making it a point to see all the important gardens, public and private, and the big flower shows which have happened in his way. He knows plants remarkably well, and talks about them equally well, but only when he has an appreciative listener, for one thing Mr. Heurlin never does is to force his views or opinions on anybody. Perhaps that is also one of the many reasons why he is the kind of man we all like to meet

Jeremiah J. Triggs has been appointed superintendent of parks at Providence, R. I., to succeed the late Frederick C. Green. Mr. Triggs was the choice of Mr. Green, and will carry on the work along the lines which Mr. Green instituted.

SUMMER COURSE IN HORTICULTURE

School of Horticulture for Women, Ambler, Penna., (18 miles from Philadelphia) offers an August Course in Floriculture, Vegetable Gardening, Fruit Growing and Canning and Preserving. Practical work out of doors forms a large part of the schedule. Teachers will be especially interested in this course. Circular upon application.

# ADVERTISING AND SELLING

While no one can doubt the value of newspaper and magazine advertising when properly constructed, neither can anyone familiar with the use of circulars overlook the benefit which can be derived from their use. The day of the simple white paper circular has passed, however. Enterprising florists are putting out literature of a character which commands attention, and unless other florists fall in line their communications are likely to find a short road to the waste basket. Yet there are still florists who think that all they need to do is jot down a few items, send them along to the printer, have them run off on bill heads and ship them along to their customers. It is true enough that some orders may be gained in this way, especially when a trade is well established, but in order to build up new business it is necessary to use literature of a kind that catches the eye as well as holds the mind.

I am led to make these observations from the fact that on my desk before me lies a circular just received from Randall's Flower Shop in Worcester, Mass. It is a 4-page circular which doubles on itself, making it about the size of a postcard, and allowing blank space on one side for the address. As it opens up one sees a very attractive garden gate in colors, with hollyhocks and other flowers edging a flagstone walk. Butterflies fill the air, and the page is turned with expectation as a result of the happy prelude.

We find the inside of the circular bordered with a conventionalized blue design, and the printed matter appearing under the title, "The Gateway." The circular then goes on to say:

"That those who have passed through may be honored on anniversary occasions—in reverent, thoughtful homage.

"That the one so loved and respected, at whose passing we pause, may be tendered the most eloquent tokens of affection.

"For these purposes this establishment was fundamentally created. So on days when there arise emotions which cannot be put into words, may we help with your memorial messages?

"Beautiful simplicity and absolute dependability feature our every effort."

"Say It With Flowers."

Then under the heading of suggestions are offered and described sprays, wreaths, vases and baskets, the price of each being given.

Altogether this is a very attractive piece of literature, and no matter what home it may go into, will certainly be given attention.

---

Another circular, less pretentious and yet effective, which I find on my desk, comes from August R. Baumer, the florist, of Louisville, Ky. It is a simple folder and devoted wholly to the possibilities of the Florists' Telegraph Delivery Association, a fact which was suggested by the telegraph instrument which appears at one side on the cover, and the vase of roses at the bottom. Three color printing is used, and the title of the pamphlet is "Send Flower Gifts by Mail." The circular may readily be slipped into an envelope in which letters or bills are mailed, and is pretty certain to reach people here and there who will be glad of the reminder. The public at large must be constantly informed of the possibilities of the F. T. D. service or they will soon forget that flower gifts can be made as readily by mail as from a local store. The service is described in the circular succinctly but convincingly in the following:

When you wish to remember someone in another city, avoid the perplexity of gift selection.

Send Flowers By Wire!

You can have flowers delivered in any city in the United States or Canada, and even in some foreign countries, in a few hours' time. Simply specify the amount you wish to send for flowers. We will then get in touch with our correspondent in the city you designate. Through a highly organized system employing the telegraph, telephone or fast mail, your floral gift will be speedily delivered to the person you wish to remember.

We are members of the Florists' Telegraph Delivery Association, an association having a bonded membership of nearly 1400 leading florists in over 850 cities and towns. Satisfactory flowers and delivery guaranteed by the collective reliability of its members.

---

Of course, it costs money to get out literature of this kind and the average florist could not afford an elaborate circular if he ordered only a few for his own use. The bigger men in the business often get out exclusive literature, but much the same effect can be obtained by purchasing the offerings of agencies which deal in supplies of this nature. The cost is very much less and the results very much worth while, if the literature conforms to the character and practice of the store, and if the service measures up to the claims presented.

By itself circular advertising is less valuable than that which has a wider constituency through other mediums, but it is of great value for supplementing newspaper and magazine advertising, and especially in presenting special offers to regular customers and to the list of people which the florist would like to have in his trade.

---

How many retail florists can tell the exact percentage of their overhead expenses? Probably not ten out of a hundred. Of course, they could make a shrewd guess, and probably a fair approximate answer. But they do not know certainly what the figures are and in many cases might be far afield. Anyhow, many a business has been wrecked as a result of failure to properly figure overhead charges, and in times like these it is essential to have an accurate cost finding system if you are doing a business of any size. A writer in the Seed World has outlined a simple cost system which might well be adapted by florists. He says:

"A rather large book is required to keep these records from day to day, for each item of overhead expense has its own particular space provided therein. Furthermore, you will want a book that provides space for recapitulation and totals not only at the end of each month but also at the end of each day. It is not necessary, of course, that you endeavor to figure out

your exact percentage of overhead daily—in fact, that would be virtually impossible—but, on the other hand, there is a vast amount of satisfaction in knowing just where your business stands from day to day, and that knowledge will ofttimes afford you an opportunity for profit. As to the percentage which represents the overhead, you should ascertain that figure exactly at the end of each month or as nearly exact as it is humanly possible to do so.

"The various items of expense entering into your overhead costs, we will say, include such things as rent, salaries to salespeople, salaries to office help and other help exclusive of salespeople, taxes, insurance, delivery costs, advertising, printing and stationery, etc. Minor items of expense that do not occur so often should be entered under a general miscellaneous head. It is best, too, to keep the salaries of salespeople separate from all other salaries, in order that you may know exactly what it costs you to sell in this regard. In time you may find that there are weak points here and there in the selling end, and with your cost system at hand the opportunity is afforded you to bolster up these weak points. At the same time you may find that you can eliminate or decrease certain items of cost having to do with delivery service, and overhead costs represented by salaries paid help exclusive of the salespeople.

"The book in which you keep your cost system should carry columns in which you can enter each separate item of overhead expense. That is, one column for rent, one for printing and stationery, one for advertising, etc. With such a record you will have totals at the end of each month that will enable you to tell at a glance just where your money is going. You will not merely have the entire total which represents your overhead expense, but you will have each cost separately classified.

"If you happen to own the building in which your store is located pay yourself a reasonable rental thereon, charging the same against the overhead. And never fail to include a reasonable interest on your investment as an overhead expense, nor the amount of income tax or federal taxes you may pay. These are undoubtedly costs of doing business, though many merchants do not include them in compiling their figures to ascertain the overhead. The government will not permit you to deduct federal taxes when you pay your income tax, but nevertheless in your own records you should enter that figure against the overhead."

BOSTON, MASS. Member F. T. D.

HENRY PENN'S MESSAGE

Everybody Sells Something or Loafs

MYSTERY OR MASTERY

Have you ever stopped to think that there is no MYSTERY in Success? It is not something intangible to be stumbled upon by the lucky few. It is based on law, not luck! It is the result of obedience to the laws that underlie business activity and human life! It comes from MASTERY of these laws, and their application to one's work! To know these laws and to apply them consciously and intelligently is sure to bring success whatever one's undertaking. MASTERY is the key-word, not MYSTERY! The change of one letter makes all the difference in the world.

EVERYBODY SELLS SOMETHING

Adjustment is the word of the hour. Business conditions are rapidly changing. Just a short time ago there were more buyers than there were goods. Now the opposite is true. There are more goods than buyers. Instead of a seller's market, we have a buyer's market. All business, or in other words, all human activity, in its last analysis is dependent upon salesmanship. The mechanic sells his skill, the teacher sells his knowledge, the merchant his merchandise, the bookkeeper his services. Are you dealing in ideas, merchandise or service? Your business success depends upon your ability to market your product, or, in other words, your success depends upon your salesmanship.

This message is taken from the Sheldon Science of Business of which I am a class member at Boston, and I think it contains meat for all florists.

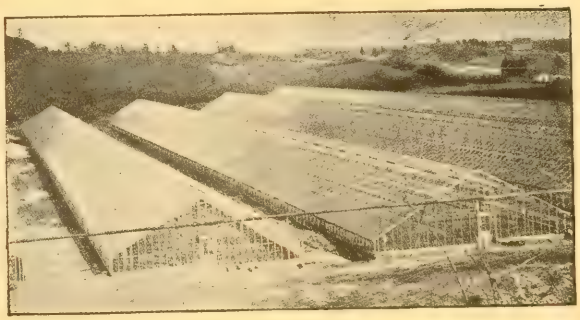
## BULB SALESMEN IN AMERICA.

Various reasons have been suggested as explaining the poor time bulb travelers have had in America. There is not much doubt that it is a case of the burnt child being afraid of the fire. Last year the American growers were so keen on capturing all the forcing bulbs both in Holland and Japan that they were persuaded to pay exorbitant prices. In some instances varieties were oversold even at those exorbitant prices, and some of the bulbs used to fill up were not O. K. When the flowers came along it was found that they couldn't realize enough to show profits, and having thus metaphorically burned their fingers the Americans are just shaking them instead of grasping at fresh cinders. Hence, we find the travelers are over here, swarming into the nurseries and fishing very diligently for the English trade. But recollections of last year's experience tend to make the British buyer hold his hand awhile. —Horticultural Trade Journal, England.



The King Construction Co., of North Tonawanda, N. Y., is building a new greenhouse in Greenport, N. Y., for Neibergall's Flower Shop.

## THE MARKET

Florists are wondering what effect on the market will be made this year by the tremendous number of Memorial Day wreaths offered. There never was a time when these wreaths appeared in such large numbers, and all kinds of stores are carrying them. The prices are relatively low, and there is a feeling that the sale of wreaths will cut seriously into the business of flower growers.

The market itself on Monday morning was fairly good. The two days of hot weather had not sent in flowers to the extent expected. Undoubtedly many growers are holding their stock, but the outlook is that there will be no over supply. The first native peonies came into the Boston market last Friday from J. A. Nelson of Framingham. Some pretty good sized shipments of southern peonies have been received from the Pennock Co., Philadelphia. Carnations are cleaning up at 4 cents. Sweet peas are very poor as a result of the hot weather. They are bringing what the grower can get. Calla lilies are selling at $2.50. Gladioli are bringing $1.50. There are some very good Valleys in the market at 6 cents. Stocks are in poor demand at 6 cents

### PECULIAR DOGWOOD INJURY

**White Scales Discolored by Unexplained Dirty Red-Brown Streaks**

It is seldom that Cornus florida has bloomed so profusely in New England, but on many of the trees this spring in the neighborhood of Boston the white scales are discolored by dirty red-brown streaks which make the trees seen from a short distance appear pink. The cause of this discoloration is not evident, although it may have been caused by the cold of Easter Monday following several days of unseasonably hot weather. At that time, however, the inflorescence-buds of Cornus florida had scarcely begun to swell. Whatever the cause of the injury its occurrence this year, when there is an unusual bloom, is doubly unfortunate, for the Flowering Dogwood often loses its flower-buds entirely in New England as we are close to the northern limit of the range of distribution of this tree, which further south flowers more profusely and develops larger bud-scales.

Forms of this tree with the scales which surround the flower-clusters varying in color from light to dark red (var. rubra) occasionally occur in southern woods, and some of these forms have been propagated by nurserymen and are popular garden plants, esecially in the neighborhood of Philadelphia, where there are many specimens of the "Red-flowered Dogwood." Several plants of this variety are now blooming by the shores of Jamaica Pond in Boston where they are flowering more abundantly than usual, for the flower-buds of this variety appear to be less hardy than those of the typical form. This is unfortunate, for when the red and white-flowered trees are planted together in masses they produce when in flower a brilliant effect.

There is a form of Cornus florida with pendulous branches, and another on which the flowers are called double from the presence of an inner row of white inflorescence-scales. These abnormal forms, however, have little to recommend them to the lovers of handsome trees.

Cornus florida is as handsome in the autumn as it is in the spring, for the upper surface of the leaves turns bright red, the lower surface retaining its pale summer tint, and the abundant clusters of scarlet lustrous fruits are conspicuous and beautiful. Not less beautiful in autumn are two trees with bright yellow fruit which have recently been found, one near Oyster Bay, Long Island, and the other in North Carolina.

### PAEONIES

It is a far cry from the little wild nigger-head paeony, native among the mountains of California, to the beautiful hybrids of our gardens. Yet the tuft of feathery leaves of the little paeony brownii were very pleasing as we saw them growing near San Diego and in the lovely Ojai Valley.

The decorative quality of the paeony has long been appreciated by artists, especially by the Japanese, who have often used it in the exquisite colored carvings of their temples.

On the eighteenth and nineteenth of June there will be a fine display of this beautiful flower at Horticultural Hall, Boston. For this year the American Paeony Society is to combine with the Massachusetts Horticultural Society in exhibiting this flower. A year ago the paeony growers were considering how they could grow and exhibit their blossoms so as to have the best effect from them. Since then there have been two wonderfully set shows in Horticultural Hall, the Roses and Native Orchids, both of which flowers the paeony excels in decorative effects, as it is larger than the rose and has more beautiful leaves than the orchid.

Many of us have grown the tree or mountain paeonies in our gardens, also an old time pink one and a damask red, but there are many new varieties in the lovely single Japanese blooms with a mass of yellow stamens in their centre, and the new beautiful double ones which we will here have an opportunity to see.

With the cultivation of the paeony we all wish to become more familiar, so we are glad that we shall have an opportunity at this free exhibition to gain information from the experience of Mr. Bertrand H. Farr, who is coming from Wyomissing, Pennsylvania, to give us the benefit of his experience in growing this lovely flower. His talk on the cultivation of the paeony will be at three o'clock on Saturday and Sunday afternoons, June eighteenth and nineteenth. Free talks on the cultivation of the paeony.

## MAKING NEW SWEET PEAS

### How the Principles of Mendel's Law Are Applied

From what we know of the history of various strains of the sweet pea one thing stands out clearly. The new character does not arise from a pre-existing variety by any process of gradual selection, conscious or otherwise. It turns up suddenly complete in itself, and hereafter it can be associated by crossing with other existing characters to produce a gamut of new varieties. How this comes about is described in popular terms by Mr. Cuthbertson in his excellent little book, "Sweet Peas and Antirrhinums."

The illustration he uses is the attempt to get a large scarlet variety which would produce four bloom sprays in abundance. The question would be asked, "Which is the brightest scarlet?" Well, whatever was selected, one of these would be one of the parents, while the other would be a vigorous-growing variety which produced large flowers on four bloom sprays every time. This would be adopted as the female parent, and in the early bud stage some flowers would require to be emasculated by removing all the anthers before they had dehisced, i. e., burst and shed their pollen.

These flowers must be carefully marked, and the next day, or the following one, pollen must be brought from the other parent, the right scarlet one, and applied to the stigma of the female. The marked flowers should then follow their normal process and ripen pods of seed which must be carefully saved and kept in separate packets till sowing time.

The seeds are sown and treated in the ordinary way, special strong culture not being advisable for such plants. They ought, however, to be planted where they can have room to grow as distinct plants and not get intertwined with any others.

"It is here that one of the most wonderful and interesting things happen," Mr. Cuthbertson says. On the flowers produced by these plants no dependence at all can be placed. Students of Mendel's law will understand why this is. The seeds of the plants produced in this, the first or F1 generation, must be carefully saved and carefully kept separate and labeled. Next sowing time they, or a part of them, must be sown and planted at least a foot apart—18 inches is better—in the lines. In this generation, called F2, new forms will arise, and it is possible the large scarlet, giving plenty of "fours," which was the object in view when setting out, may appear.

If it does it must be carefully marked and the seed saved for sowing again next season to see if it is fixed and will breed true to the improved type. Of course, it may or it may not. If it does not, some other selection may give something of promise, and the process of growing to prove must be carried on the following season. It will be seen from this, adds the author, that the process of raising is a prolonged one, and after the new variety has proved to be fixed, a stock must be worked up for sale, which may take two or three years.

# RAMBLING OBSERVATIONS OF A ROVING GARDENER

I was much interested to learn from Mr. Julius Heurlin, of the Blue Hills Nursery, the other day, that there has been an unusual demand this year for flowering crabapples, flowering cherries and hawthorns. Apparently garden makers are beginning to appreciate the value of these plants, and are using them to a greater extent than ever before. This is well, for they certainly are worthy wider planting, and I am glad to note that the nurserymen are finding a growing demand.

As yet it isn't possible to obtain these trees in great variety, but it is the better known kinds, like Parkmani, spectabilis and Bechtel's crab which are most in demand. Mr. Heurlin is growing one very remarkable crabapple that ought in future years to have a big sale. It is called Neidwitzskyaha, and probably will have to be given some name more easily pronounced before its popularity is assured. This plant is all red. I mean by that that it has red flowers, red fruit and red bark. Even the roots, if you cut into them, are found to be red. I understand that D. Hill, of Dundee, Ill., is stocking up with these plants, believing that they will have a large sale.

---

The Blue Hills Nursery specializes on evergreens. All visitors to the various shows held the past year in Horticultural Hall, Boston, are familiar with this fact, because Mr. Heurlin has shown some of his fine specimens and repeatedly received prizes. He has whole blocks of coniferas which are hardly to be surpassed anywhere. At the same time he grows a number of perennials, and has in his fields the whole set of Astilbe Arendsi. He also has some fine plants of Trollius, including a number of seedlings of his own which will eventually come on the market, and which will, I think, make a great hit. I have never seen some of them surpassed in color, the orange variety being especially fine. Some of these Globe flowers have a surprisingly long season, Eleanor, for example, a seedling from Europaeus, blooming every month in the summer except August. This is a lemon colored variety, with large blooms on long stems. An unnamed seedling which attracts attention immediately is almost red, and will be a decided addition to the varieties of Trollius on the market when it comes into commerce.

---

It is pleasant to find that some of the nurserymen, like several of the seedsmen, are getting away from the old fashioned type of catalogue. I have just had occasion to look over one for the present season issued by the Elm City Nursery Co., of New Haven, Conn., and have been much gratified at its handsome appearance, excellent illustrations and convenient arrangement. It is different from most catalogues, both in shape and lay-out, as well as in its tapestry-like covering with conventionalized floral design.

Considerable attention is paid, and, I think, justly, to home landscapes, community landscapes, and industrial landscapes. Illustrations show churches and factories which have been given an unusual and delightful setting by appropriate landscape planting. It would seem as though this was a branch of the business which might well be emphasized.

The whole book avoids the appearance of trying to crowd a lot of mate-

Azalea Vaysei at the Arnold Arboretum

rial into a very small space. The type is large. There is plenty of space between the lines, and one finds pleasure in looking through the pages, even though he may not be in need of anything offered.

And finally there is an excellent feature in the way of suggestions for special plantings of all kinds, including even evergreens for the seashore, and deciduous shrubs for poor soil. Catalogues of this kind are likely to be kept on the library table within easy reach instead of being filed away on a shelf or dumped into the waste basket.

While the little catalogue of Alt F. Clark, of Netcong, N. J., is much more modest and entirely different in character, it shows a lot of originality, and will be appreciated, I think, by dahlia growers everywhere. It is called "The Abridged Dictionary of the Dahlia," and contains practically all the dahlias which have become standard. A classification has been worked out so cleverly that anyone can understand it at a glance, and the different varieties are arranged alphabetically. Also there is a list of dahlias under color heads, and Mr. Clark has made a neat adaptation from some of the florists in putting a line at the bottom of the cover page, "Dahlia Phone, Netcong 145."

Horticulturists who have an opportunity to visit the new greenhouses of Pierre S. DuPont, at Wilmington, Del., are to be congratulated. I believe these greenhouses are not yet completed, but when done they will form one of the most attractive show places of the kind in the world, with thirteen acres under glass and devoted largely to the propagation of new species of different plants.

The present greenhouse range is remarkably complete, including an orangery and a grapery, as well as houses for growing melons, figs and peaches. In the new range practically every kind of hothouse grape is to be grown, I am told, and, if I am correctly informed, 40 orange trees from California are to be planted in the orange house.

The northern part of the structure is to be designed for a theatre and assembly room, with marble floors and a seating capacity of 650. There is to be no partition between the theatre and the orangery, the growing trees forming a background for assemblies within the building. It is doubtful if anywhere else in the world does such a mammoth private plant exist.

## AMERICAN AZALEAS

The American Azaleas begin to bloom about two weeks later than the earliest Asiatic species, and of the sixteen species only seven with several varieties are hardy in New England. These in the order of their flowering are Rhododendron canadense, the Rhodora, R. Vaseyi, R. roseum, R. nudiflorum, R. arborescens, R. calendulaceum, and R. viscosum. The other species are confined to the extreme southern states; with one species endemic in Florida, another in Alabama, one in the Arkansas-Texas region, and one in California. It is interesting that eight species, one-half of all the species which have been found in America, grow in the state of Georgia, which contains a larger number of species of these plants than any other region of equal extent. Plants of all the American species are in the Arboretum nurseries or have been raised here with the exception of Rhododendron alabamense of which seeds have not yet been collected; and some of the southern species, although not for

northern gardens, like R. prunifolium with crimson flowers, the scarlet flowered R. speciosum and the yellow flowered R. austrinum, may be expected to become popular garden plants wherever they find a suitable climate.

The handsomest of the species hardy at the north, and when in flower one of the most beautiful shrubs of the North American flora, is the Appalachian R. calendulaceum with its yellow or flame-colored flowers which do not open until the leaves are nearly fully grown. Another species of the southern Appalachian Mountains, R. Vaseyi, with pure pink flowers which have already opened has proved a good garden plant at the north.

Of the species, however, with rose-colored or pink flowers R. roseum is even a handsomer plant than R. Vaseyi. Although first distinguished and named in France as early as 1812, it has always been confused in this country with other species until quite recent years, and has never received the attention which it deserves. It is a shrub from three to fifteen feet tall with rose-colored flowers which open after the leaves begin to unfold, and are more fragrant even than those of R. viscosum. This Azalea is common in southern New England and southward to Virginia; it grows in western New York, northeastern Ohio, southeastern Illinois and the adjacent part of Missouri, that is in regions of limestone soil, and the fact that it can grow in lime makes it possible to cultivate it in parts of the country where other Rhododendrons cannot grow. There is a group of these plants on the right hand side of the Meadow Road in front of the Lindens.

—Arnold Arboretum Bulletin.

A newspaper item dated at Sayville, N. Y., says that men representing florists in the cities have been out into the country districts buying up all the available lilacs possible, paying remarkably good prices for them.

## S. A. F. & O. H. Department

### National Flower Show

Prints of the floor plan showing the areas available in the big Municipal Building in Cleveland for trade exhibits at the forthcoming National Flower Show will be ready for mailing very shortly. Prospective exhibitors are advised to give early consideration to the matter of making their exhibits, so as to be in readiness to make reservations on receipt of plans, for only by acting promptly can the best locations be assured.

Full details concerning the Grand Capital Prize of $5,000, offered for the best development of a garden, will be forthcoming in a short while. Even with an indefinite knowledge of conditions, great interest is already being taken in this feature of the Show, which will be the most important and grandest ever attempted at an exhibition in this country, or, indeed, anywhere. Never before was so large a prize offered. Several other large prizes offered should be equally attractive to those able to compete for them. George Bate, of 227 High avenue, Cleveland, is chairman of the committee appointed to secure out of town exhibits, and is particularly anxious to get into communication with any grower who can exhibit either in the private or commercial classes. It is not at all too early to commence preparations for exhibits in many of the classes, in fact, they should be commenced now. As S. A. F. President Roland stated at a recent meeting in Cleveland, no private estate or growing establishment is too small to undertake some kind of exhibit, and small as well as large exhibits are cordially welcomed. If a large number of these small exhibits are forthcoming, there can be no question as to the success of the Show. Bear this in mind, Mr. Grower, and do what you can to swell the list of exhibits.

### The Washington Convention

Additional exhibitors in the Trade Exhibition are the following: Ever Ready Flower Pot Cover Co., Buffalo, N. Y.; L. C. Stroh & Sons, Batavia, N. Y.; Macaw Bros., Norwood, Del. Co., Pa.

The President and Secretary of the Society will be in Washington on June 2, and will have a meeting with Adolph Gude, Z. D. Blackistone and David Grillbotizer, the local advisory committee, at which will be discussed the arrangements now being made for the Trade Exhibition, which at this time

bids fair to break all previous exhibition records in point of size and comprehensiveness. If any prospective exhibitor desires any further or special information in regard to the Exhibition he should communicate with the Secretary at once, so that, if necessary, the matter may be taken up at the meeting mentioned.

**Membership Statistics**

President Roland is of the opinion that the Society should be in possession of statistics covering the business of each and all of our members, for publication in the Society's annual report. Such information would be of great value when the Society is called upon to make trade representations before legislative bodies. In addition to stating our membership figures could be given covering what our membership represented in the way of glass operated, invested interests, and so forth. With the idea of collecting this information, the Secretary will prepare and shortly mail to each member a questionnaire, which should be completed and returned for the compilation process. It will be interesting to our members to know how many retail florists, growers, private growers and gardeners, and others representing branches of allied trades are comprised in our membership, and how many grow the whole or part of the products which they sell. It is not thought that even a guess could be hazarded as to the number of square feet of glass operated by S. A. F. members.

It would also, in the opinion of our President, be desirable to publish in the annual report all statistical information it is possible to secure in the direction of horticultural industry and practice in this country. Much data of this kind is obtainable through the departmental research of the Government Bureaus at Washington and the Secretary will endeavor to assemble all the information available at the proper time.

JOHN YOUNG,
Secretary.

## SAYS WOMEN MAKE BEST SEED TESTERS

Man has to step back for women in the branch of agriculture, seed testing and analysis, according to Secretary of Agriculture Shaw, of Ohio. Ever since Ohio's pure seed law went into effect two years ago women have been employed almost exclusively, whenever possible. Men either are incapable or unwilling to do the close eye work required in testing and analyzing seeds, according to Mr. Shaw.

When the law was about to become effective, he wrote to the United States department of agriculture for applicants for laboratory chief. The department recommended several women in its employ. Mr. Shaw wrote back to say that he preferred a man to do the work. "No, you don't," was the reply. "You want women analysts by all means. It's only once in a great while that you find a man that's any good for the job."

So Shaw employed Mrs. Mary Penny, recommended by the federal department. She has been in charge of the work ever since, with three assistants.

**Plant Poisoning** It is an interesting case which is to come up in a Massachusetts court, where a woman has sued a concern of florists for $10,000 damages as a result of being poisoned as she claims by a primrose plant which she had bought for decorating her house. The woman contends that the plant proved to be a poisonous species, as a result of which she became seriously ill. Incidentally her husband wants $5,000 more for the loss of her services during this illness, together with his distress of mind.

Not a few florists have had complaints from customers who have suffered irritation from handling Primula obconica, but we never knew of a case taken to court before. It is a well-known fact, of course, that this plant has properties which are somewhat poisonous in their effects on some people, although the great majority of people can handle them with impunity. It is a fact equally well known that some people will naturally make considerable fuss about anything of this kind, even though the poisoning may not be of a serious nature. That being true, probably it would be wise for florists to exercise a certain amount of care in their sales of this primrose. A few sales may be lost if customers are told that the plant sometimes causes an irritation of the skin, and that, if anything of this sort develops, it is best to wear gloves when caring for it. But in the end the precaution may save legal expenses and possibly an adverse verdict.

**Protecting New Plants** When Mr. F. J. Chittendon addressed the Council of the Chamber of Horticulture in England not long ago on a scheme for protecting the raisers of new plants, he brought out a number of knotty points which will give growers food for thought. We do not know what would happen in England if the right of a purchaser to propagate what he has purchased should be questioned, but we feel pretty certain that any such ruling in this country would meet with a mighty protest. Of course, any man can keep his novelties to himself and enjoy them all he likes on his own premises if he sees fit to do so. But if on the contrary he sells them, it is pretty certain that buyers will strike a few cuttings without feeling at all conscience stricken. Isn't it quite likely, too, that while some propagator was nursing along a particularly fascinating novelty without offering the public any plants, some other grower might get out something so near like it as to catch the cream of the trade and spoil the sale for the other man when he was ready with his stock? A writer in one of the English papers has the following comment:

"Why not take in another idea and protect the buyer against the man who foists something upon him as a novelty which is really only a renamed plant or something so closely resembling an old favorite that only a label can tell the difference? When somebody's Dahlia Sunshine is exactly like some other body's Sunray, let somebody be committed to the penal servitude; or when Jack Spud sells his Potato Earthlifter and it proves to be only Tam Samson's Molehill, hang Jack Spud. You would soon find that instead of clamoring for protection of novelties raisers of new things would be slipping them into their neighbors' gardens after dark lest they, too, should be found guilty of some dire crime, and instead of paying high prices for novelties we should become antiquarians seeking out the varieties that Noah grew in his back garden when he had brought the Ark to anchor just outside the Firth of Forth."

**The Washington Garden** Congress is still considering the fate of the Botanic Garden in Washington. Congressman Langley, of Kentucky, is advocating a plan for the enlargement of the existing garden or for its removal to East Potomac Park. It this the best solution of the problem? In the minds of many people who have studied the question carefully it is not. Washington ought to have a botanic garden which will be as complete and as well designed as any in the world, and horticultural authorities all over the country are pretty well agreed upon this matter. At the last session Senator Brandegee, of Connecticut, introduced a bill which unfortunately got lost in the mass of accumulated business, but which ought to be introduced again this season. It was a broad-gauged bill which met widespread approval. It called for the removal of the garden to Mt. Hamilton, where it would have a site recommended by the Commissioner of Fine Arts, and although two miles from the capitol, yet readily accessible. Here there are elevations varying from sea level to 230 feet above the sea, with 32 varieties of soil and every opportunity for development. At its best the original garden could be enlarged to contain only 20 acres, while all the famous gardens in the world contain at least 125 acres, and many of them go up to 2,000 acres. East Potomac Park again is simply a flat piece of ground which is rapidly being made into a pleasure park. Here and its present location can be little more than a flat garden. At Mt. Hamilton, with plenty of opportunity for expansion, it could become the great scientific institution which it ought to be, without losing any of its appeal to the eye. All kinds of plants, including trees and shrubs from foreign lands, could be grown here, and trials and experiments without number carried on. If the United States is to have any such garden at all, it ought to at least approach in size and service that of other countries.

# "Montgomery's Priscilla"

That's the name of the new pink rose! The name will be "Priscilla" probably after the public has had it a while, but we have had to add the prefix to cover the rules of nomenclature.

In order to get someone who knows more about roses than we do to give an unbiased, honest opinion on the merits of this rose, we have placed 12 plants of it with each of the following rose growers:

E. G. HILL CO., Richmond, Ind.
DAILLEDOUZE BROS., Brooklyn, N. Y.
ALBERT H. AMLING CO., Maywood, Ill.
DUCKHAM-PIERSON CO., Madison, N. J.
ROWAYTON GREENHOUSES, Rowayton, Conn.
MILLER FLORAL CO., Farmington, Utah
WELLWORTH FARM GREENHOUSES, Downers Grove, Ill.
A. S. BURNS, JR., Spring Valley, N. Y.
ROBT. SIMPSON, Clifton, N. J.
CHAS. H. TOTTY CO., Madison, N. J.
NOE-RUZICKA CO., Madison, N. J.
WM. H. ELLIOTT CO., Madbury, N. H.
ANTHONY RUZICKA, Madison, N. J.
W. J. PILCHER, Kirkwood, Mo.
JOS. HEACOCK CO., Roeloffs, Pa.
WENDLAND & KEIMEL, Elmhurst, Ill.
JOY FLORAL CO., Nashville, Tenn.
ROBERTS ROSE CO., Denver, Colo.
GEO. C. WEILAND, Evanston, Ill.
LAKEVIEW ROSE GARDENS, Jamestown, N. Y.
BASSETT & WASHBURN, Hinsdale, Ill.
HARRY O. MAY, Summit, N. J.
F. R. PIERSON, Tarrytown, N. Y.
L. B. GODDINGTON, Murray Hill, N. J.
JOS. H. HILL CO., Richmond, Ind.
STEPHEN MORTENSEN, Southampton, Pa.

Ask them about it, if you will, at any time. They have our permission to tell the truth. We are going to let this rose sell itself! We shall be simply order takers.

A. N. PIERSON, Inc. Cromwell, Conn.

## COMMITTEE ON GRIEVANCES

### A New Department of Wholesale Grass Seed Dealers' Association.

At the meeting of the Wholesale Grass Seed Dealers' Association in Chicago on January 25, 1921, the Committee on Grievances was created, consisting of seven members of the Association, the Association Counsel being denominated as Chairman. This Committee has been duly organized.

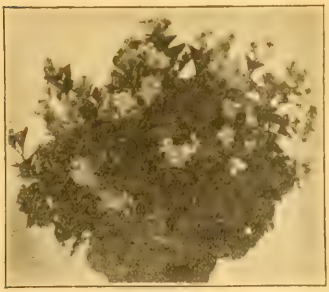
The principal duties of the committee are to investigate and, so far as possible, to attempt to eliminate fraud or misrepresentation of quality in the sale of agricultural seeds, whether the offences complained of are by members of the Wholesale Grass Seed Dealers' Association or by non-members.

The methods of carrying on the work of this committee have been carefully thought out, after negotiations with various Government agencies, and may be briefly summarized as follows:

(1) In case of mistake or unintentional misrepresentation of quality, correction by private agreement with the seedsmen.
(2) Report of offender to members of the Association.
(3) Expulsion of member from Association.
(4) Presentment of complaint to the Federal Trade Commission.
(5) Prosecution under Federal or State Seed Laws.
(6) Prosecution under Postal Laws.
(7) Criminal prosecution for common fraud.

Any Government official, seedsman, purchaser of seeds or other interested party, whether of the United States or of foreign countries, having a bona fide complaint against a seed grower or seed merchant dealing in agricultural seeds and resident in the United States, may file complaint with the Chairman of the Committee, and such complaint will be fairly, fully and promptly acted upon by said Committee without cost. The services of the Committee are not perfunctorily offered. The value of the Committee's services largely depends on the interest of those having and reporting bona fide complaints.

CURTIS NYE SMITH,
Chairman and Counsel,
Committee on Grievances.



73 Tremont St.,
Boston, Mass.

## TO BE BURIED IN WENHAM

### The Body of B. Hammond Tracy, Jr., Being Brought Home

The body of B. Hammond Tracy, Jr., who was drowned off the coast of Brittany, France, May 5, is being brought home for burial, by Paul Dodin, his very dear friend and fellow student. The young men were graduates of Harvard, Class of 1920, and both were awarded fellowships for French universities, and they have been inseparable companions during the year. Mr. Tracy had just been awarded a renewal of the American Ambulance Fellowship which would have entitled him to a second year's study in France. The funeral services will be held in the Congregational Church at Wenham, Thursday, June 2.

The Chas. C. Hart Seed Co. of Wethersfield, Conn., is to erect a new three-story building as an addition to its plant.

## George Watson's Corner

"You in your small corner and me in mine."

"Carry me back to old Virginia." That is the song that Peter Penn Watson, an old time Southern gentleman, asks to hear the Kilby Street men sing in their patriotic hoorah on the 16th inst. He loves that song and we love him for loving it. No matter what we feel about Napoleon and George Washington and Fritz and the blawsted English and Scotch—we Sinn Feiners are always willing to join in on "Carry Me Back to Old Virginia."

The old strains carry us back, no matter how busy we are in 1921 affairs. Where can you get in the jazz music of today anything like the sentiment of "carry me back to Old Virginia." It can't be done. They say the only music the monkeys in the circus will dance to is the jazz stuff. I like to see and laugh at the monkeys in Barnum's Hoora every year but excuse me from that level. Let's have "Auld Lang Syne" once!

Well, all right, after we've had "Auld Lang Syne" twice—then "Bide a Wee" and "Bairnies Cuddle Doon," we can have once more "Carry Me Back to Old Virginia," just to please Peter Penn Watson.

This has about as much to do with horticulture as the Monkey Slipper has to do with the orchid—the glory of the Orient—and yet, they are akin and very human to all of us who dig below the surface and trace the human soul in its search for the ideal and beautiful.

J. M. Bridgeford, Managing Director of the Watkins & Simpson Company, of London, England, arrived on the SS. Aquitania, May 21st. He proceeded to California on a crop inspection tour, and will visit the trade in the East later.

M. J. Callahan is to be congratulated on his fine new flower store at 39th and Market streets. It is a three-story building, with a fine show window and entrance on the ground floor. The latest modern improvements for attracting the passerby are all there, and none of the high toned downtown establishments make a much better showing than this West Philadelphia institution. "Joe," as the boys call him, is a real up-to-date boy and a credit to his old training ground on Chestnut street. Our call the other day was unexpected and found him knee deep in business, but still able to take care of a little more.

flower shows that took place in Philadelphia and other cities were always well represented by a showing of his best specimens. He seldom appeared personally at gatherings, but was well represented by his next of kin, Louis Burk, who used to say "Alfred puts up the money: I gather in the glory." But, of course, that was only Louis' joke. He put up his money, too, and was one of the workers in addition.

Robert Craig, Sr., paid us a pleasant visit on his recent return from Porto Rico. His six months' sojourn down there seems to have agreed with him. He looks fine, and has a good stock of new jokes.

George W. Kerr of the W. Atlee Burpee Company left on a crop inspection tour to the far West on the 20th inst. Mrs. W. Atlee Burpee, Sr., and her son, David Burpee, president of the Burpee Company, also left on the same date for a tour to California. They expect to be gone four or five weeks.

There will be a lively debate at the next meeting of the Florist's Club. Tom Edison does not think much of the college boys. So Ed Ferncroft has in his usual up-to-date style got a professor from State College to tell the college side of the story. Robert Craig, Sr., will follow and open the discussion from the business man's standpoint. Don't forget to be there. First Tuesday of June. You want to hear both sides. Live subject all right.

## NASSAU COUNTY (N. Y.) HORTICULTURAL SOCIETY

At the regular monthly meeting of the Nassau County Horticultural Society at Glen Cove, L. I., C. Gandenherger was elected to active membership. President Noonan appointed James Halloway, John Everett and Samuel Trepano to judge the monthly exhibits and their awards were as follows: Twelve pink Darwin Tulips, 1st, Frank O. Johnson; 3 heads of lettuce. 1st, William Allen; vase of outdoor flowing shrub, 1st, Frank O. Johnson; collection of lilacs exhibited by Frank O. Johnson, thanks of the society; pot of Brasso Cattlya, exhibited by Frank O. Johnson, honorable mention. One petition for active membership was received at this meeting. The chairman of the executive committee read the schedule of the Rose Show to be held early in June. Mr. Wallace of Carter's Seed Co. was present and spoke on the lawn and garden contest being conducted in this city. Mr. Popp of Scheiper's was with us and gave a very interesting talk on gladiolus and the different methods of growing them. Exhibits for June 8th meeting will be 12 H. T. Roses, mixed; 12 H. P. Roses, mixed; 25 Sweet Peas, mixed. William Popp special for assistant gardeners, best decorated basket. C. Wallace special, best 6 varieties of vegetables.

ARTHUR COOK,
Cor. Sec.

## EXHIBITION AND LECTURE

The May exhibition of the Massachusetts Horticultural Society will be held at Horticultural Hall, Boston, Saturday and Sunday, May 28 and 29. Interesting features of this exhibition will be the displays of miniature rock gardens filled with wild plants and flowers and the exhibits of native plants.

Prizes are offered, also, for hardy flowering shrubs, irises, tulips, narcissi, and other seasonable flowering plants. The first exhibits of vegetables for the season will be made.

The following additions to the printed Schedule of Prizes are offered by Miss Marian R. Case, of Weston:

Columbines—Native wild species (Aquilegia canadensis)
- Six speciments, one prize, $3.00

Long-spurred species
- A. chrysantha, yellow, six specimens, one prize, 3.00
- A. cærulea, blue and white, six specimens, one prize, 3.00
- Any other colors or hybrids, six specimens, one prize, 3.00

Lupines—Any variety, native or cultivated. Three prizes, $3, $2, $1

Mr. Kenneth W. Gillett of Southwick, Mass., will give information on the cultivation of wild flowers and will lecture both afternoons at three o'clock.

## DAMAGE BY FROST

Frost within the past week has done much damage in New England. At the nursery of R. & J. Farquhar Co nearly all of the thousands of Lilium Regale plants were killed back to the ground. This lily seems to have suffered bady in many gardens, too, whereas the Sargent lily and most of the other kinds were not harmed. Lilacs were damaged to a considerable extent and many other shrubs show the effects of the frost.

## SPECIAL RATES TO WASHINGTON

Many of the railroads are to offer special rates for the S. A. F. Convention in Washington, Aug. 16-18. In some cases the round trip tickets will be at the rate of one and one-half fare. No reduction will be made by the New England roads, although through tickets allowing the reduction on other roads will be sold. In all cases it will be necessary to show identification tickets.

Mr. George Walter Dawson, son of the late Jackson Dawson, of the Arnold Arboretum, has just been awarded the degree of Fine Arts by the University of Pennsylvania, where he is now an instructor. He was one of the five men throughout the United States to whom this honor was given.

## GARDENER'S AND FLORIST'S CLUB OF BOSTON

At the last meeting of the Gardener's and Florist's Club of Boston, W. H. Judd, the president, gave a very interesting talk on new shrubs and trees, dealing especially with those to be found in the Arnold Arboretum.

Resolutions were adopted on the death of the late F. C. Green of Providence, R. I.

It was voted to have a ladies' night at the June meeting, and to hold the annual picnic at Cunningham Park, Milton, about July 24.

The exhibits were numerous and included the following:

Heliotrope and Spiraea, W. W. Edgar Co.; Tomatoes, Victory and Sterling Castle, W. N. Craig; Long Spurred Columbine, James Methven; Trollius in variety, James Heurlin; Flowering Shrubs, Arnold Arboretum; Lily of the Valley, Leuthy and Co.; Native Orchids, Frederick Cave; Primulas and Double Blue Centaureas, W. H. Golby; Sweet Peas, Tulips and Indoor Grown Potatoes, James Donald.

Aylward's Flower Store in Woburn, Mass., is being greatly improved, especially by the addition of new and much larger windows.

Frederick W. Rupp, a well known florist of Lawrenceburg, Ind., recently suffered a broken leg when his driving horse ran away.

This is the kind of stock that has built our business. It will help build yours too.

# PEONIES

DO YOU KNOW that we have grown Peonies at Cherry Hill for over FIFTY years?

That the late THOMAS C. THURLOW was one of the first to INTRODUCE the BEST of the EUROPEAN VARIETIES in NEW ENGLAND?

That we have REPEATEDLY TAKEN the HIGHEST HONORS that BOTH the MASSACHUSETTS HORTICULTURAL SOCIETY and the AMERICAN PEONY SOCIETY CAN BESTOW?

That we have one of the FINEST COLLECTIONS of PEONIES that may be found in the ENTIRE WORLD?

That WE HAVE MORE of the RARE INTRODUCTIONS in PEONIES than may be found in any SINGLE PLANTING either in this COUNTRY or ABROAD?

That a VISIT to OUR NURSERIES during MID-JUNE WILL AMPLY PROVE the above STATEMENT?

COME and see THERESE, LADY ALEXANDRA DUFF, KELWAY'S GLORIOUS, LA FRANCE, LE CYGNE, MME. GAUDICHAU, MILTON HILL, PHILIP RIVOIRE, RAOUL DESSERT, MONT BLANC, ROSA BONHEUR, SARAH BERNHARDT, SOLANGE, TOURANGELLE, MRS. C. S. MINOT, many of the SHAYLOR and BRAND VARIETIES and DOZENS of OTHERS all in their WONDROUS BEAUTY.

Then we have in addition the FAMOUS COLLECTION of THURLOW SEEDLINGS among which may be found some that will RIVAL even the BEST EVER PRODUCED.

COME and SEE a GLORIOUS SIGHT not to be found elsewhere.

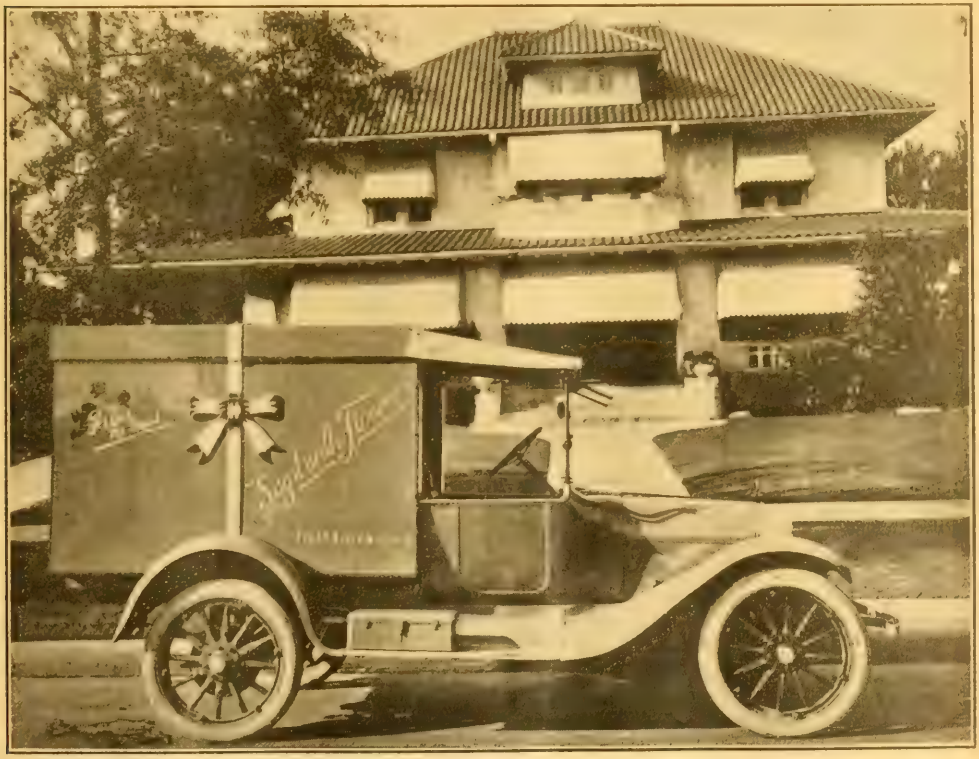
Vol. XXXIII JUNE 10, 1921 No. 11



## THE TALK OF THE TRADE

The European corn borer is making a lot of extra work for florists in New England. The officials in charge of quarantine measures are increasingly vigilant in enforcing the ruling that during June and July no gladioli, dahlias, hollyhocks, zinnias, cosmos, asters, or chrysanthemums shall be shipped without inspection. The express companies early in the month notified wholesale florists that they could not accept any of the flowers named without a certificate of inspection. This means that they must be examined at the store. It would seem as though examination at the grower's premises would be sufficient, and that the grower's plant would be the proper place for making such an examination.

However, the ruling holds good, and inspectors have to be called when glads, which are the only flowers in the list being shipped at the present time, are sent out. It makes no difference whether the flowers are grown under glass or in the open. In fact, one of the inspectors is quoted as saying that the corn borer had been found in several instances in flowers grown under glass.

---

I predicted several years ago that Lilium regale, sometimes called Lilium myriophyllum, would develop into a florist's flower. Already this prediction is being fulfilled, for some remarkably handsome blooms of this remarkable lily are being received by Welch Bros., in Boston. They come from John Marshall, of Providence, who has quite a large block of them. It is too early as yet to tell just how they will sell, but there is every reason to believe that the public will take to them with avidity, not only for their beauty but also for their fragrance, which is exceedingly sweet without being overpowering. A few flowers in a retail store should have considerable advertising value. If displayed in the open their perfume would undoubtedly extend to the farthest corner of the room, and a perfume, if agreeable, is a surprisingly important factor in increasing sales. I hope that Mr. Marshall's venture

This Delivery Car Is An Excellent Advertising Medium

with the Regal lily will prove successful and profitable, for if it does, other growers will certainly follow in his footsteps.

---

Theodore Outerbridge, of Sunnylands, Bermuda, who has been visiting the trade in New England, is very emphatic in declaring that Bermuda lily bulbs are again being grown in their old-time form. He says that the bulbs which he is now growing are entirely free from disease, and are very free blooming. Florists securing ten to twelve flowers from one bulb would find it quite a contrast with the bulbs which they have been getting from Japan. It may be that the Bermuda trade will never regain its old-time importance. Yet it is quite possible, on the other hand, that Bermuda bulbs will eventually be sought in much larger numbers than at present by growers who want the highest quality without much consideration to price. In any event, Mr. Outerbridge painted the outlook for the industry in Bermuda in bright colors.

---

After spending an hour in the Henry Robinson's establishment in Winthrop Square, Boston, I understood how it is that the Robinson Bros. have such a large hold on the retail trade of the east as they possess. Mr. Robinson seemed to recognize everybody who went into the store the minute they stepped inside the door. Almost invariably he was able to call them by name, and usually could refer to some member of their family, to their business, or to some previous conversation.

It's a great thing to have a memory like this. It gets a man a long way in his business dealings, for after all is said and done, the personal equation is oftentimes the most important factor. Almost every man likes to be called by his first name under such circumstances, and to feel that the man or woman from whom he is buying is interested in him sufficiently as an individual to remember his face, his tastes and his habits. We cannot all be blessed in this way, which is one reason, perhaps, why some of us stay at the bottom of the ladder, while others climb to the top.

---

The Gude brothers, of Washington, have been figuring prominently and pleasantly in the public prints. At a recent meeting of the Grand Commandery, Knights Templars, of the District of Columbia, Mr. Adolph Gude, vice president of the S. A. F., was unanimously elected Grand Commander. Mr. Gude is very much of a Mason. He is already a Past Commander, Past High Priest, Past Grand High Priest, Past Patron of the Eastern Star, Past Grand Patron of the Eastern Star, and Past Potentate of Almas Temple. That certainly is going some.

Mr. William Gude, Washington representative of the S. A. F., has recently been honored by the president of the United States, who appointed him a member of the Rent Commission. On a recent occasion when the Humane Society held a big parade, the Gude Bros. showed a float which was 30 feet long and 8 feet wide, and carried a pergola covered with climbing roses, American Beauties, and palms. The float was drawn by six horses, and had as a passenger the president's dog, Laddie Boy. Needless to say this float created much favorable comment.

---

Max Schling, who is always doing something new and novel, now offers a free course in floral arrangement to last from June 22 to July 2 inclusive. Said Mr. Schling the other day: "I propose to give at least five or six hours a day entirely to this work while this course is on. Perhaps more time will be given if the conditions require it. We propose to go through the whole line of work, including the making of bridal decorations, individual gifts, the preparation of funeral work, etc. We shall start with the wiring up of single flowers and proceed to the final touches of the finished piece." An opportunity like this is likely to be taken advantage of by a great many people who for various reasons are interested in it.

---

When Fisher the florist of New London, Ct., found himself confronted with the problem of catering to more people than his store would readily accommodate, he hit upon the novel plan of making an open air garden. The plan was rapidly put into execution and featured particularly for Memorial Day, although kept open all through the bedding season. A garden was laid out in a semi-formal fashion, among the points of interest being the handsome tree fuchsias. Trained box was used for giving character to the beds which contained geraniums, cannas, marigolds and a general line of bedding stock.

The beauty of the garden soon became noised abroad and many people who were not regular customers came to look at it. In many instances they were so pleased with the garden itself and the store that they purchased either plants or cut flowers. In this way the proprietor and his clerks were brought into contact with many new people. Inasmuch as sales were made directly from the various beds, it was necessary to keep replenishing the latter, which caused considerable work. This, however, had its advantageous side, because on each day the display was somewhat different. Mr. Fisher seems to have hit upon a happy advertising scheme, and it certainly was one which brought him considerable new business, besides accomplishing its original purpose of relieving store congestion.

---

Sentimentally speaking there is a close connection between birds and flowers. Whether or not this connection can be carried into a flower store with profit to the owner is a question which florists in different parts of the country are considering. The experiment is being tried by Caplan, the Florist, in Boston, in quite a large way. Mr. Caplan at his store on Massachusetts Ave., has a large number of birds in attractive cages interspersed with his flowers. Birds and flowers make an attractive window to which many people are drawn and the sales so far have been good.

Mr. Caplan is a thorough business man, though, and is not keeping birds in his store simply because he is fond of them. If they do not make a profit for him or if they interfere with his already prosperous florist business, they will go out. Many other florists are watching Mr. Caplan to see what his ultimate decision will be. While talking with me the other day he said he had not determined to his own satisfaction just what he would do. If the bird feature is retained the ceiling will be arched and the cages hung in such a way as to make a charming decorative feature. It is partly a question of whether the demand continues and how big the losses are.

"Some birds will die," said Mr. Caplan, "in spite of all I can do. Now when flowers begin to go bad they can be used in some way, but a dying bird is useless. Then there is the watering and feeding and the cleaning, all of which require considerable time and labor. So, you see, there are many things for the florist to consider before he stocks up with birds. I am just stating these points for the benefit of other florists who are interested in the subject, and not to discourage anybody. The birds may prove a good investment. I am not quite certain yet."

Whether or not it pays to keep a large number of birds in stock, and Mr. Caplan has had sixty at one

time, no one can question the advertising value of song birds when used in a small way or the decorative value of artistic bird cages. Many florists have already learned that this is true.

---

Florists are often judged not so much by the company they keep as by the kind of delivery vehicles they maintain. It is not easy to overrate the advertising value of good delivery service. To a large extent the business will succeed or fail on that service. Kerr, the Florist, of Houston, Texas, appreciates this fact, and also realizes that an unusual delivery car will attract attention and keep his name before the public. Accordingly he had a car body constructed to resemble a huge flower box. A huge ribbon passes around it, and on the sides in large letters is the slogan, "Say It With Flowers." An old saying might be rephrased to read "Originality is the life of trade."

---

It is interesting to find that the carnation Laddie is proving almost as popular in England as it has in this country, largely through the efforts of Mr. Englemann, who was greatly impressed with it upon the occasion of his visit to this country a year or so ago. Mr. E. H. Jenkins writes in one of the English papers about Laddie as follows:

"Already Laddie has taken two Awards of Merit—that of the Royal Horticultural Society on November 30th last when shown by Mr. Englemann, Saffron Walden, and that of the British Carnation Society when shown by Messrs. Low and Co. on December 1st, when out of a possible 100 it gained eighty-one points. Had flowers equal in size, color and freshness to those shown by Mr. Englemann before the Royal Horticultural Society the previous day been staged it would doubtless have gained a few points more, though the number given augurs well for merit, and particularly so this year when frost and fog had been rife and more severe than usual prior to the dates named. To the Committee of the Royal Horticultural Society Mr. Englemann sent up a magnificent vase of some five or six dozen blooms, each a replica of the other as regards size, color and freshness, the whole of them perfectly poised and supported on rigid 2½ feet long stems, as convincing a lot as could be conceived."

---

## AMERICAN SEED TRADE ASSOCIATION

The 39th Annual Convention of the Association has been called to meet at St. Louis, Mo., Wednesday, Thursday and Friday, June 22, 23 and 24, 1921, in the Banquet Room, 17th floor, Hotel Statler, the first session beginning at 10.00 o'clock a. m.

The St. Louis Committee on Arrangements requests that special notice be given of the first annual 18-hole blind bogy golf tournament of the seed trade, at the Kirkwood Country Club, Tuesday afternoon, June 21, preceding the convention. Everyone is urged to enter whether he plays or not. There will be a cup for first prize donated by the local seedsmen and probably consolation prizes as an additional incentive.

The Southern Seedsmen's Association is planning to meet with us after adjourning their convention earlier in the week.

Yours respectfully,
C. E. Kendel, Secretary.

## AMERICAN PEONY SOCIETY

When the eighteenth annual exhibition of the American Peony Society is held at Horticultural Hall, Boston, in co-operation with the Massachusetts Horticultural Society, an unusually fine display is looked for. Saturday and Sunday, June 18 and 19, have been fixed as the dates of the exhibit. The local committee consists of A. H. Fewkes, Winthrop H. Thurlow and Harry A. Norton. The judges of the exhibits will be as follows:

**Open Classes**

Harry A. Norton, Ayers Cliff, Quebec, Can.; Bertrand H. Farr, Wyomissing, Penn.; A. H. Scott, Front and Market Sts., Chester, Penn.

**Amateur Classes**

Prof. A. P. Saunders, Clinton, N. Y.; James Boyd, Haverford, Penn.; R. T. Brown, Queens, Long Island, N.Y.

**Ready Now**

**The Nursery Manual**

By L. H. Bailey

An indispensable book for every nurseryman. Complete direction for propagating every kind of nursery stock, with many illustrations. Copies sent from the office of HORTICULTURE upon receipt of price. $3.25.

SUMMER COURSE IN HORTICULTURE

School of Horticulture for Women, Ambler, Penna., (18 miles from Philadelphia) offers an August Course in Floriculture, Vegetable Gardening, Fruit Growing and Canning and Preserving. Practical work out of doors forms a large part of the schedule. Teachers will be especially interested in this course. Circular upon application.

ELIZABETH LEIGHTON LEE, Director.

## HYBRID RHODODENDRONS.

It is to the hybrids and not to the species of Rhododendrons that our gardens are most indebted. The history of many of these hybrids is obscure, and the records of their breeding have been so badly kept that it seems practically impossible to obtain the information about them needed to continue intelligently the breeding of Rhododendrons with the view of obtaining hardier races for New England gardens.

The plants which have been imported from Europe in the last seventy years in numbers running up into the hundreds of thousands are practically all the so-called Catawbiense Hybrids. These hybrids were obtained in the first place apparently by crossing Rhododendron catawbiense with R. ponticum, a Caucasian species not hardy here, and with R. maximum. Later the red-flowered Himalayan R. arboreum was crossed either with R. catawbiense directly or with its hybrids. Probably other Indian species were used in these crosses, which appear further to have been more or less crossed among themselves. Several hundreds of these hybrids have received names, but only a comparatively small number have proved hardy in this country, those in which R. catawbiense and R. maximum preponderate being naturally the hardiest, although a few of the hybrids with red flowers showing the influence of R. arboreum are hardy here.

Some of the Rhododendrons which have proved hardy here are evidently hybrids of the pale yellow-flowered Rhododendron caucasicum, a shrub which grows at high altitudes on the mountains of the Caucasus and of Asia Minor. These hybrids, or those of them which have been successfully grown in the Arboretum, are low shrubs with compact clusters of pink, white or red flowers which open from two to three weeks earlier than those of the Catawbiense Hybrids.

There is much confusion in regard to the history of many of these plants and their breeding. The most satisfactory of them here is called Boule de Neige. Judging by the name, it was raised in France or Belgium. Only the name appears in the most elaborate work on Rhododendrons which has been published, and nothing now appears to be known about its breeding. Boule de Neige has white flowers faintly tinged with pink when they first open, and is one of the best Rhododendrons which can be planted in New England.

In England several hybrids of Rhododendron Smirnowii have been raised. Some of these which originated at Kew have been tried in the Arboretum, but without much success. Of more promise are a number of plants raised at Holm Lea by Charles Sander by crossing R. Smirnowii with a Catawbiense Hybrid. They have now flowered in the open ground for several years and appear perfectly hardy. The flowers are large, in large compact clusters and vary from clear pink to deep rose color. The leaves are longer than those of either parent, but are without a trace of the felt which covers the lower side of the leaves of R. Smirnowii. We have here perhaps an early-flowering race which may add greatly to the possibilities of Rhododendron cultivation in this country.

A hybrid to which the name R. Holmleanum will be given raised by Charles Sander at Holm Lea by crossing the Chinese R. discolor, which is closely related to R. Fortunei, with a Catawbiense Hybrid has flowered under glass for two years and will flower this year in the open ground in the Arboretum where it has not been injured by the past mild winter. This hybrid has pale pink flowers in large compact trusses, and if it does not prove permanently hardy here it will be a useful plant for the conservatory.—*Arnold Arboretum Bulletin.*

## THE MARKET.

The market is quiet but not so dull on the whole as might be expected. Good stock sells reasonably well, but there is none too much of it, as weather conditions are affecting the output. This is especially true of carnations, which are becoming pretty small. The price on carnations has naturally taken a big drop. They sell from 1½ to 3 cents. Roses are rather better, especially whites. Prices run from 3 cents up. There are plenty of peonies, which are very even in quality. Prices run from 75 cents a dozen up. Some very good sweet peas are coming in, although there are still plenty of poor ones. Prices are from $1 to $3 a hundred. There are enough gladioli to met the demand at from $1 to $1.50.

# ADVERTISING AND SELLING

I can't remember any previous Memorial Day when so much newspaper advertising has been done by florists. This, too, is apart from the advertising of artificial wreaths which was undertaken by stores not essentially flower shops. It is interesting to find that some of the most extensive advertising was done in the smaller towns.

One piece of copy which impressed me greatly was that of E. W. Pearson, a florist of Newburyport, Mass. Mr. Pearson used an entire page in the Newburyport Daily News, and the way his copy was presented does much credit to him and to the printer who set it up. The design, while bold and vigorous, was very effective. No attempt was made to crowd a lot of matter into the space, as a result of which large type could be used. The words "Memorial Day" in big letters appeared across the top of the page. Under that came a paragraph which expressed the sentiment of the occasion, but was more or less perfunctory.

What caught the eye immediately was a box extending across the page. Two dollars on one side and three dollars on the other appeared in figures almost two inches high, while between them were the words, "A Large Stock of Rustic Baskets Filled with Plants." It was these baskets which Mr. Pearson featured, and I can think of no more emphatic way of bringing them to the attention of the public than was used in this advertisement. In smaller boxes further down the page artificial wreaths and cut flowers with the prices were advertised. It was a striking piece of advertising, and Mr. Pearson is to be congratulated upon it.

---

In Providence the plan of co-operative advertising was adopted, W. A. Bowers, Johnson Bros., T. J. Johnson & Co., The Colonial Flower Shoppe, and the Westminster Greenhouses uniting in an excellent piece of copy with military decorations. In many of the other larger cities this same policy was followed. It is a question, though, whether this kind of advertising pays best. It seems to obliterate to a large extent the individuality of each florist, and to that extent may undo much which has been accomplished in the building up of a unique advertising campaign. In some instances it may be very valuable, but there are some florists who will serve their own interests best if they go it alone.

One interesting variation of the co-operative advertising plan was found at Worcester, Mass., where the Gazette published the Memorial Day program in a double column down the center of the page, with the advertisements of four prominent florists grouped on each side. This was rather an unusual plan, and a good one, at least from the florists' point of view, as no one could read the program without seeing the florists' announcements.

---

Sometimes an advertisement "gets over" by its boldness and brevity. In other instances where smaller space must be used, more is often accomplished by adopting an intimate conversational style with one's message. It seems to me that C. N. Pond, of Brattleboro, Vt., put his copy in excellent language. It reads as follows:

"Just call around at our Canal Street Greenhouses (formerly the Allen Greenhouses) and have your pick from the best lot you ever saw. Geraniums—no limit this year. Nice, large, beautiful plants. Order your cemetery work early. We have the largest assortment of plants, for that line of work, of anyone in Southern Vermont. Quality cannot be beaten. Stop and look around a bit before you buy. We will have a large assortment of Cut Flowers for Memorial Day, better than ever before. All will be strictly fresh."

---

I wonder how many florists keep track of the weddings in their towns. If a list of the dates should be kept it would offer some excellent prospects for business. Suppose that just before the anniversary of a wedding the husband should receive a polite note from the florist reminding him of the occasion and suggesting a gift of flowers for his wife. It is safe to say that the responses would be numerous and that permanent customers would be obtained in this way. Quite possible there are florists following this or a similar plan. It is simply thrown out as a suggestion worth considering.

## BOSTON NEWS NOTES.

Dr. Walter Van Fleet, the famous rose hybridizer, has been a recent Boston visitor, spending some time in the Arnold Arboretum.

The store at 16 Tremont Street, Boston, has been leased by Samuel Marksman for a florist's store.

Early in July the Rosary, now located in Copley Square, will move to 749 Boylston Street, just above the Lenox Hotel, but on the opposite side. Here they will have commodious quarters, and the store is now being made ready for their occupancy. This concern has a very large business in the automobile trade.

Erick Anderson, of Woburn, has taken over the Waban Rose Conservatories, recently sold at auction. Mr. Anderson is a skillful grower and well known in the trade.

Plans are being laid for the annual picnic of the Gardeners' and Florists' Club, of Boston, to be held at Cunningham Park, Newton, July 21. These events are always largely attended and very enjoyable.

Del Carthright, formerly of the Waban Nurseries, has gone with his father, Elijah Carthright, at Natick, Mass.

# AMERICAN ROSE SOCIETY

## Meeting of the Executive Committee—Visit to Washington Rose Gardens

On the afternoon of June 1, the Executive Committee of The American Rose Society, with some especially invited guests, visited the rose garden of Dr. Walter Van Fleet, at Bell, Md., to inspect the many new and beautiful rose hybrids, which are to be disseminated through the offices of the American Rose Society and its nurserymen members.

The chief interest centered in the rose W. C. 134, which is to be officially christened "Mary Wallace" at the Portland Rose Festival in June and which is to be disseminated in the Fall of 1922 and Spring of 1923. Of great interest also were W. H. T. 237, W. S. 18 and a large number of others which were covered with blossoms despite the unfavorable season and which it is hoped may be disseminated in the future under similar arrangements.

A meeting of the executive committee of the American Rose Society was held at 1214 F street, Washington, D. C., on the evening of June 1st.

Plans for the propagation and dissemination of the rose "Mary Wallace" (Van Fleet W. C. 124) were perfected and announcements have been sent to all nurserymen who are believed to be interested in participating in the propagation of this rose under the conditions drawn up by the U. S. Department of Agriculture and the American Rose Society. Chief among such conditions are propagation in time to allow dissemination in Fall of 1922 and Spring of 1923, and the selling of the resulting plants at $2.00 each, paying to the American Rose Society a royalty on each plant sold during the first selling year. Any rose growing member who issues a retail catalogue and who has not received the official announcement and blank contract may secure these by writing the secretary's office at once. A deposit of $50.00 is required with each contract as an evidence of good faith. Applications should be sent at once and will not be accepted after July 1st.

There was a long discussion on the policy of the Society in regard to the registration of roses having names either identical or similar to roses previously introduced; and it was voted that the executive committee should have authority to refuse registration in such cases.

Over 100 members of the American Rose Society assembled at Gude's Flower Store at 9 a. m., June 2nd, for the all day Rose Pilgrimage. The party went by automobiles to the Arlington Test Garden, where many beautiful roses were seen in bloom. Here Dr. Ball, assistant Secretary of Agriculture, made an address, telling of the many sided work of the Department of Agriculture, speaking in detail about the Rose Test Garden and Dr. Van Fleet's work at Bell, Md.

The party then proceeded to Twin Oaks to see Mrs. Bell's charming rose garden and thence via Rock Creek Park to the Walter Reed Hospital, where, through the courtesy of Col. Glennin, a luncheon was served.

After the luncheon the annual meeting was held.

President Pyle at the beginning of the meeting, expressed the thanks of the society to Col. Glennin and Prof. Lumsden, for their kindness in inviting the members of the society to visit the Walter Reed Hospital.

The first business to be brought up was the election of officers and Mr. Gude at once moved the re-election of all officers and directors whose terms expired. This was seconded and immediately carried.

The officers thus re-elected for one (1) year were: president, Robert Pyle; vice-president, F. L. Atkins; treasurer, C. H. Totty; secretary, John C. Wister.

The directors thus re-elected for three years were John H. Dunlop, Wallace R. Pierson, Robert Simpson.

President Pyle then spoke for a few moments about the proposed Washington Rose Show Garden and the Portland rose trip which is scheduled for June, 1922. He then called upon Prof. Corbett, who spoke about Dr. Van Fleet's work at Bell, Md., and upon Secretary Wister, who spoke of the work of the Secretary's office, and about the dissemination of the "Mary Wallace" rose. Dr. Shoemaker then told of the work of the Tacoma Horticultural Society, and Miss Harrison expressed the wish that the American Rose Society should come to Washington again next year. Mr. McFarland spoke very briefly about the American Rose Annual, and then Mr. Gude closed the meeting with a tribute to the work of the Walter Reed Hospital.

It was by this time after three o'clock and the rest of the afternoon was spent in inspection of the buildings and grounds of the Hospital under the guidance of Col. Glennin and Prof. Lumsden.

The thanks of the American Rose Society are due to Mr. Gude and his local committee who planned the itinerary of the day's trip, and who made the day such a successful one.

John C. Wister, Secretary.
606 Finance Building,
Philadelphia, Pa.

## FERN SHOW IN BOSTON

### Planned for September—A Bulb Exhibit Next Spring

It has been the policy of the Massachusetts Horticultural Society the last two years to hold a big show each spring. The Orchid Show and the Rose Show have proved the value of this policy, which is to be continued next spring when a mammoth bulb exhibition will be held. An appropriation of $6,000.00 for this exhibit has been made and the show will be held some time in March. The schedule calls for gardens of 300 square feet for private growers and 500 square feet for commercial gardeners.

The trustees have also voted an appropriation of $3,000.00 for an exhibition of ferns to be held in Horticultural Hall, Sept. 25 of this year. This will be a show of an unusual nature, and one certain to attract a great amount of interest. The classes will include Orchids, Bromeliads, and Cacti. Altogether 52 classes are provided for and a preliminary schedule is soon to be issued.

## SWEET PEA FROM A MUMMY

William Patterson, a prominent florist of Wollaston, Mass., has figured in the Boston papers the past week on account of the so-called sweet pea flowered in his greenhouse and claimed to have been produced from a seed buried with an Egyptian mummy nearly 4,000 years ago. Mr. Patterson said he got the seed from Chester I. Campbell, American Treasurer of the Egyptian Exploration Corporation. Mr. Campbell says that, according to the story told him, it was one of six recovered in the ruins of a temple 70 miles from Cairo, and that it was found clutched in the hand of a mummy. The flower is a very handsome blue, and in many ways resembles a regulation sweet pea bloom.

WHEN WRITING TO ADVERTISERS PLEASE MENTION HORTICULTURE

## AMERICAN NURSERYMEN'S ASSOCIATION

The annual meeting of the American Association of Nurserymen will be held in Chicago at the Congress Hotel, June 23-24. All the meetings will be held in the Florentine room on the second floor, and many important matters are expected to come up for discussion. An extensive program has been prepared. It includes addresses by the Secretary of Agriculture, Hon. Henry C. Wallace, Dr. C. L. Marlatt, Chairman of the Federal Horticultural Board, who will talk on "The Situation as to Future Imports of Fruit Tree Seedlings," and L. B. Scott, whose subject will be "The Growing of Fruit Tree Seedlings in America."

At an executive session there will be a discussion on "How Market Development Funds should be used to produce greatest results." The objective of this discussion is a plan of publicity the coming year, when it should be started and how it should be signed, the approximate amount of money to be spent, etc. There will be a discussion also on the question of the association trade mark, "Trustworthy Trees and Plants." At this convention it probably will be decided whether the trade mark is to be continued or dropped, and how it is to be featured if continued. These are only a few of the very important matters to be brought up at this convention.

## BOSTON SHOW WELL ATTENDED.

The show at Horticultural Hall, Boston, last Saturday and Sunday was very well attended. It was rather late for irises but some good specimens were shown. The peonies came in fairly well, but the feature of the show was the exhibit of seedling azaleas from T. D. Hatfield, Wellesley. They were very fine and made a splendid impression. The prizes awarded were as follows:

### FLOWERS

**H. H. Hunnewell Fund No. 3.** Rhododendrons, 12 varieties: 1st, T. C. Thurlow Sons Co.; 2d, Faulkner Farm. Rhodendrons, 6 varieties, 1st, Faulkner Farm; 2d, T. C. Thurlow Sons Co. Azaleas, 12 hardy varieties, 1st, Faulkner Farm.

**American Iris Society Prizes.** Display of any variety of Iris arranged for effect; amateurs only: 1st, Hillcrest Gardens. Silver Vase, Iristhorpe. (Mrs. Homer Gage). Irises, 24 vases, not less than 12 varieties: 1st, Miss Grace Sturtevant. (Bronze Medal.)

**Prizes offered by Mr. and Mrs. Edwin F. Greene.** 12 Vases of Irises, not less than 6 varieties: 1st, Mrs. C. W. Willis; 2d, Iristhorpe. Hardy Herbaceous Flowers, 1st, Faulkner Farm.

**Gratuities.** T. C. Thurlow Sons Co., display of Rhododendrons, Iris and Azaleas. Faulkner Farm, Collection of Azaleas and Rhododendrons. Miss Cornelia Warren, Collection of cut Poppies. J. K. Alexander, Collection of Iris. Iristhorpe, Collection of Iris.

**First-Class Certificate of Merit.** Miss Grace Sturtevant, Seedling White Iris; Iris Parisiane X Mesopotamia. Arnold Arboretum, Rhododendron Holmleaense. (Discolor X Catawbiense.)

**Honorable Mention.** E. M. Dunphe, seedling Iris, "Francis Bennett." Miss Grace Sturtevant, Collection of Iris; T. C. Thurlow Sons Co., Collection of Seedling Peonies; H. H. Richardson, Anisostichus Caprolatus. Arnold Arboretum, Rhododendron Anneliesae.

**Vote of Thanks.** Walter Hunnewell, Collection of Cut Hybrid Rhododendrons.

### VEGETABLES

**Prizes offered by Mr. and Mrs. Edwin F. Greene.** Lettuce, 1st, Warren H. Heustis; 2d, O. M. Scott; Mushrooms: 2d, Hillcrest Gardens; Radishes: 1st, Hillcrest Gardens; Spinach: 1st, Hillcrest Gardens; Collection of Vegetables: 1st, Wm. McKay Donald; 2d, Hillcrest Gardens.

**Honorable Mention.** Hillcrest Gardens for Strawberries: Senator Dunlap, Premier and Wilfred Wheeler.

## WALTER REED HOSPITAL GARDEN

An exceedingly interesting and valuable pamphlet comes from the agricultural section of the Walter Reed General Hospital at Washington, D. C. It is in effect a hand list of trees and shrubs, both native and exotic, that are to be found at the hospital, which has a remarkable garden and arboretum. As a valuable appendix there is a list of native and migratory birds frequenting the grounds. The pamphlet was prepared by David Lumsden, instructor in agriculture, and is expected to stimulate an interest among the officers, nurses, patients and men in the beauties of nature as they are found close to the hospital. The hand book will also indicate to visitors the location of the various groups.

The book has been prepared with unusual care, and the scientific names are those adopted by the American Joint Committee on Horticultural Nomenclature. In looking through the publication one is surprised at the extent and variety of the shrubs contained in the hospital grounds. Among them will be found many which are considered rare. With its elaborate indexes and the precise although condensed description of each shrub, the book would seem to be of more than usual helpfulness to amateurs for whom it is presumably most especially intended.

## NEWS NOTES.

Snell & Read are building an addition 45x100 to their greenhouse at Little Falls, N. Y.

The Quality Flower Shop of Passaic, N. J., has been purchased by Tunis Van Goor and De Waal Malefyt.

George Weaver & Sons, of Wilkesbarre, Pa., have purchased the Dewey Park greenhouse from the Harry Carnell estate. This house contains 25,000 square feet.

The Boston Telegram recently published a sensational article to the effect that many hundred dollars' worth of rhododendrons have been stolen from public grounds and transferred to private estates. It was stated at the Park & Recreation Department that there is absolutely no truth in this report and no grounds whatever on which to base such allegations.

George Sims has been elected manager of the Flushing, N. Y., branch of Trepel's florist store.

# RAMBLING OBSERVATIONS OF A ROVING GARDENER

Mr. A. C. Burrage, president of the American Orchid Society, is continually surprising flower lovers by his exhibits, which are of a nature never before seen in this or any other country. At a recent show in Horticultural Hall, Boston, the display consisted of an Odontoglossum collection of most unique and unusual character. The beautiful and showy Odontoglossums, from the eastern slopes of the Andes mountains of South America, have commonly been considered almost impossible of cultivation in the United States, owing to the extreme heat of the summers and the dryness of the atmosphere. They would grow well in the moister climate of England, but seldom survive long after being brought here.

Finally, however, all the conditions needed for making these wonderfully beautiful flowers thrive have been met at Orchidvale, Beverly Farms. Here in a unique greenhouse devoted to Odontoglossoms, Masdevallias and Cockliodes, an atmosphere has been created artificially which is very similar to that where these orchids grow naturally.

The house was designed to reproduce, so far as possible, the exact conditions under which the plants grow wild; that is, to furnish them with the shade, the cool air laden with moisture, and the constant circulation of air around the plants. The house itself is sixty-four feet long, fourteen feet wide and sixteen feet from the bottom to the ridge-pole. It is made of concrete, and nearly all of it except the glass roof is below the ground. The lower part of the house is made into a tank filled with water, largely with rain water gathered from the roof. The floor of each of the two benches and a separate shelf under them are covered with the porous rock known as tufa stone, which slowly gives up by evaporation the water which is sprinkled over it.

Outside of the house are small cement-lined wells, several feet deep, which convey the air into the lower part of the house just over the cold water, and at the top of the house on each side of the eaves there is a double row of ventilators running the entire length of the house, one on each side of the ridge-pole. Twelve inches above the roof are horizontal wooden roller shades and twelve inches above these another roll of wooden shades running vertically. Along the top of the ridge-pole is

Odontoglossum Rossii Majus

*New Haven - - Conn.*

a perforated metal pipe through which cold water is sprinkled over the roof in extremely hot weather.

On dull, dark days both sets of shades are rolled up and the light allowed to go directly through the glass to the plants, whereas on hot days both sets of shades are pulled down, the roof sprinkled with cold water from the pipe, and the air brought underground and cooled by passing over the water and circulated among the plants by an electric fan at the end of the house.

The protection thus afforded the plants, which is so much more effective than has heretofore been used either in this country or any other, is the cause of the extraordinary growth of the plant bulbs and the exquisite beauty of their flowers.

The house contains some 2000 Odontoglossum species and hybrids, large and small, young and old, among them many of the finest known and winners of high-class certificates and medals in European exhibitions.

---

Visitors to the Arnold Arboretum in Jamaica Plain, Mass., are much pleased with a new map which has just been prepared. This map, while less detailed than the one used in the Guide, is easier to study. It shows clearly the gates which are nearest to the different groups and with its aid one may motor from one gate to the other and thus see nearly all of the big displays with but little walking. The lilacs, for example, are shown to be near the Forest Hills gate. The azaleas and laurel are close to the South Street gate, the conifers near the Walter Street gate, the viburnums a short distance within the Center Street gate and the crabapples on Peters Hill only a short distance from the Bussey Street gate. The location of the Chinese plants, the hawthorns, the crabapples and the like are clearly indicated. A copy of this map under glass has been posted on each gate, a convenience which is greatly appreciated by strangers.

---

The lectures being held at Horticultural Hall, Boston, in connection with this season's shows are attracting much attention. These lectures are being held both Saturday and Sunday afternoons, and relate to the flowers or plants most in evidence in the exhibition hall. On May 28 and 29, Kenneth W. Gillette, of Southwick, Mass., talked on "Our Native Wild Flowers." Last Saturday Mr. T. D. Hatfield discussed rhododendrons and azaleas, a subject upon which he is remarkably well informed.

These lectures which have been made possible through the generosity of Marian Roby Case, prove beyond a doubt that visitors to the shows are glad to learn about the cultural directions required to grow successfully the different plants shown. The smaller shows, while not attracting big crowds, yet bring in a great many people who are really interested in flower growing, and sometimes individual exhibits at these smaller shows are remarkably good.

The Odontoglossums shown by Mr. Burrage on May 28 and 29 made a show all in themselves, and on the same date H. F. Chase, of Methuen, Mass., exhibited a vase of Lord June iris which aroused the greatest enthusiasm among iris lovers present. Plants of this iris have been shown before, I believe, by Mr. Chase, but never, perhaps, have specimens as good as the vase shown at this exhibit been seen anywhere.

### National Publicity Campaign

The time when the Publicity Committee will make the contracts for the next series of advertisements in the national magazines is fast approaching. The funds at present available to cover these contracts and settle outstanding liabilities are not large, in fact, do not permit of what the committee feel would be a proper effort to revive the slogan "Say it with Flowers" after the dormant period now happily ending. The first of this advertising should reach 12,000,000 or more people, just as some of our former advertising did. As anyone conversant with magazine advertising knows, this means an expenditure of several thousand dollars. All florists who have not yet subscribed to the Campaign Fund are urged to send in their subscriptions now, thus enabling the Committee to carry out their plans to the full.

Subscriptions received for 1921 amount to $25,188.60. The following are subscriptions of record since our last report:

| | |
|---|---|
| B. F. Barr, Lancaster, Pa. | $30.00 |
| Chas. M. Keanz, Great Falls, Mont. | 10.00 |
| The El Paso Carnation Co., El Paso, Ill. | 10.00 |
| Wm. R. Gibson, Berkley, Calif. | 10.00 |
| J. W. Dudley Sons Co., Parkersburg, W. Va. | 100.00 |
| Wright's Flower Shop, Los Angeles, Calif. | 25.00 |
| Mrs. Amos McCulloch, Clarksville, Texas | 10.00 |
| L. C. Hecock Floral Co., Elyria, Ohio | 50.00 |
| Furrow & Co., Guthrie, Okla. | 15.00 |
| Hirzel Bros., Toledo, Ohio | 10.00 |
| Chas. Eble, New Orleans, La. | 10.00 |
| J. F. Wilcox & Sons, Inc., Council Bluffs, Iowa | 200.00 |
| B. M. Joseph, San Francisco, Calif. | 35.00 |
| J. Gammage & Sons, Ltd., London, Ont., Canada | 25.00 |
| A. Washburn & Sons, Bloomington, Ill. | 100.00 |
| Louis Sprankle, Huron, Ohio | 7.50 |
| Siebrecht Floral Co., Winona, Minn. | 20.00 |
| Texas State Florists Assn., Ft. Worth, Texas | 50.00 |
| London Nurseries, Baltimore, Md. | 10.00 |
| | $727.50 |
| Previously reported | 24,461.10 |
| | $25,188.60 |

Now is a good time to locate positions for the slogan billboards. Quite a number of these billboards are still on hand, and immediate shipments of them can be made at the regular price, $50 each. One of these boards on your property, Mr. Florist, would mean a lot of publicity for you, and also for our industry. The price represents the actual cost, and a low cost at that.

The Secretary has just received a letter, dated at Seattle, from J. F. Ammann, now in the West on a tour in the interests of the Campaign, in which he states that his party is meeting with splendid success wherever they go. In each city so far visited an allied trade organization has been formed, and this means permanent aid in our publicity work.

### The Washington Convention

President Roland and the Secretary were in Washington on Wednesday, June 1, when they met with the advisory committee on the Trade Exhibition, Z. D. Blackistone, David Grillbrotzer, and Adolph E. Gude, the latter acting for his father, Vice President Adolph Gude, who was unavoidably absent from the city. It was found that all details in the arrangements for the exhibition were being worked out smoothly, and preparations were up to date in every respect. A visit was made to the convention hall, where it was found that plenty of space would be available to accommodate all applicants for space. President Roland was glad to be assured on this point, as he had been a little in doubt as to the hall's capacity.

Additions to the list of exhibitors are constant, and the prospects are that the entire area as laid off on the official plan will be taken up before

### The Convention Program

The official program for the Convention is now in course of preparation, and will be completed for mailing to members at least thirty days before the opening date of the convention. Some interesting addresses have already been arranged for, including one by F. J. Giblin of Utica, N. Y., on "Greenhouse Heating Up to Date," one by L. D. Fernald of the New York Post, on "Publicity for Florists," and one by Prof. L. C. Corbett, of the Bureau of Plant Industry, U. S. Department of Agriculture, Washington, D. C., on "The Production of Florists' Stock with Reference to Quarantine Order No. 37."

Although the list of guarantors for the show was completed some time ago, the following additional subscriptions have been received, making the total $20,632.00:

| | |
|---|---|
| Whitthuhn's Flower Shop, Cleveland, O. | $100.00 |
| A. Washburn Sons, Bloomington, Ill. | 100.00 |
| Pittsburgh Cut Flower Co., Pittsburgh, Pa. | 200.00 |

### Department of Plant Registration

Public notice is hereby given that the following new plants have been submitted for registration by the Society:

By Henry J. Doll, Wanskuck Greenhouses, Providence, R. I.—Geranium, Mrs. Henry J. Doll. A seedling, parentage unknown. Plant a strong grower, free and early bloomer. Zone in leaf very distinct. Height of plant about 18 in. Color of flower glowing scarlet; size 2 in. in diameter. Flowers single, 40 to 50 to a cluster, 5 petals to a flower.

By E. H. Kunze, Newton, Kans.—Geranium, E. H. Kunze, 1917 seedling, parentage unknown. Strong grower, of medium height, very compact. Foliage bright green, heavy from bottom up. Flowers brilliant rose pink, shading to white center; immense trusses of double florets, many larger than a silver dollar, each carrying from 11 to 17 petals. Prolific bloomer, flower stalks forming at every or every other joint, quite often two from one joint at the same time. A 4 in. pot plant has been seen to have 11 flower stalks in full bloom and heavy bud at once.

Any person objecting to either of these registrations, or to the use of either proposed name, is requested to communicate with the Secretary at once. Failing to receive objections, registration will be made three weeks from this date.

John Young, Secretary.

**On the Inside.** The election of the Society of American Florists and Ornamental Horticulturists to the Chamber of Commerce of the United States is worthy of more than passing comment. It is a long step forward, and should mean much to the future of the society. And in the appointment of Mr. John K. M. L. Farquhar of Boston by President Thomas Roland as National Councillor, there is full assurance that the interests of the society will be carefully and intelligently looked after. It will be Mr. Farquhar's place to serve as a connecting link between the great organization of florists and the National Chamber at Washington. It is an excellent arrangement altogether. The Chamber of Commerce holds an exalted postion at the capital, and the views presented through its committees are always listened to by legislators with appreciative attention. The fact is realized that behind this organization are many of the country's most influential men. Because of his wide knowledge of horticultural matters of every nature Mr. Farquhar will be able to present to the Chamber matters of vital importance to the florists of America in a most convincing manner.

**More Quarantines.** It seems quite likely that Mr. Farquhar in his capacity of National Councillor will speedily have an opportunity to take up with the Chamber of Commerce at Washington matters of the greatest importance to florists throughout the country. Quarantines continue to multiply, and unless they are modified or abated in some way, a big financial loss will follow.

Consider some of the latest instances. Formerly cuttings of Ficus elastica were imported from Belgium. Under press of circumstances the business went to Louisiana, and it was expected that heavy shipments would be made from the vicinity of New Orleans in May and June. What happened? Why, just as the first shipments were ready a quarantine was clamped down on the two producing communities by reason of the camphor scale. How long will this quarantine last? No definite announcement on this point was made, but doubtless long enough to spoil the season's crop of cuttings, estimated at over 100,000.

Take also the matter of palm seeds from Oceania. There is a ruling of some month's duration that such seeds must be fumigated for twenty-four hours by carbon bisulphide. Recent shipments of Kentia seeds from Australia were received under permit, with a health and sterilization certificate attached to each case, yet the officials ruled that the seeds must be fumigated and this was done. It is feared, however, that this fumigation will greatly reduce the germination, besides adding to the delivered cost of the seeds.

We understand that a Belgian delegation is now in this country seeking modification of quarantine No. 37 and will lay their case before the United States Department of Agriculture. They seek a modification only as the regulations apply to greenhouse grown plants. If we are not mistaken, another delegation is soon to come from Holland.

Altogether there is evidence that a crisis is not far distant. The fact is recognized that many importers and growers in this country are in favor of a more or less general embargo. Their position is to be respected, and their arguments considered. What is fair to them is also fair to those opposing an embargo of any kind. The point is that the industry needs to have the whole situation clarified and put upon a straight business basis, so that everybody will know just what to expect for a long time ahead and just how to map out a course of conduct.

**Wreaths To Burn.** Whatever one may think of artificial wreaths for Memorial Day use, there is no question about the fact that far too many of them were put on the market this year. They were sold in dry goods stores, at notion counters, and on the streets. They brought into direct competition with florists concerns which ordinarily are engaged in an entirely different line of trade. Many of them were sold so cheaply by hucksters that buyers were given the impression of overcharging on the part of florists. In some instances wagons loaded with wreaths were hauled to cemetery entrances and the wreaths sold for what they would bring. It is true that most reputable florists sold artificial wreaths, many of which were exceedingly well done. There is going to be a demoralization of Memorial Day trade, however, if conditions which prevailed this year are duplicated in the years to come.

## EVER GET TO THINKING OVER YOUR HARD LUCK?

When Abraham Lincoln was a young man he ran for the Legislature in Illinois, and was badly swamped. He next entered business, failed, and spent seventeen years of his life paying up the debts of a worthless partner.

He was in love with a beautiful young woman to whom he became engaged—then she died.

Later he married a woman who was a constant burden to him.

Entering politics again, he ran for Congress, and again was badly defeated.

He then tried to get an appointment to the United States land office, but failed.

It was only after all this that success began to come to him.—Commercial News.

# "Montgomery's Priscilla"

That's the name of the new pink rose! The name will be "Priscilla" probably after the public has had it a while, but we have had to add the prefix to cover the rules of nomenclature.

In order to get someone who knows more about roses than we do to give an unbiased, honest opinion on the merits of this rose, we have placed 12 plants of it with each of the following rose growers:

E. G. HILL CO., Richmond, Ind.
DAILLEDOUZE BROS., Brooklyn, N. Y.
ALBERT H. AMLING CO., Maywood, Ill.
DUCKHAM-PIERSON CO., Madison, N. J.
ROWAYTON GREENHOUSES, Rowayton, Conn.
MILLER FLORAL CO., Farmington, Utah
WELLWORTH FARM GREENHOUSES, Downers Grove, Ill.
A. S. BURNS, JR., Spring Valley, N. Y.
ROBT. SIMPSON, Clifton, N. J.
CHAS. H. TOTTY CO., Madison, N. J.
NOE-RUZICKA CO., Madison, N. J.
WM. H. ELLIOTT CO., Madbury, N. H.
ANTHONY RUZICKA, Madison, N. J.
W. J. PILCHER, Kirkwood, Mo.
JOS. HEACOCK CO., Roeloffs, Pa.
WENDLAND & KEIMEL, Elmhurst, Ill.
JOY FLORAL CO., Nashville, Tenn.
ROBERTS ROSE CO., Denver, Colo.
GEO. C. WEILAND, Evanston, Ill.
LAKEVIEW ROSE GARDENS, Jamestown, N. Y.
BASSETT & WASHBURN, Hinsdale, Ill.
HARRY O. MAY, Summit, N. J.
F. R. PIERSON, Tarrytown, N. Y.
L. B. CODDINGTON, Murray Hill, N. J.
JOS. H. HILL CO., Richmond, Ind.
STEPHEN MORTENSEN, Southampton, Pa.

Ask them about it, if you will, at any time. They have our permission to tell the truth. We are going to let this rose sell itself! We shall be simply order takers.

A. N. PIERSON, Inc. Cromwell, Conn.

## STRAWBERRIES.

Strawberries!
Ripe Strawberries!
Who'll buy my strawberries?
Who'll buy?

The old street calls of London are now collected in volumes of historic interest to put upon our shelves, but never was there a time when there were more varieties of delicious strawberries than today. As I look over the beds at Hillcrest and see the old Marshall berry growing with the Wildwood, Big Joe, the Bushel Basket, Mr. Graton's delicious Saint Martin, Dreer's New Prolific, and various others, I feel that it is hard to choose the best from among them. The many prizes which Hillcrest has won for its exhibitions of strawberries bring us letters asking for our choicest varieties and for information about growing them. With the Wilfrid Wheeler No. 7 berry, we have for two years won prizes, as it has ripened early, been good in form and color with a delicious taste.

We are therefore glad that Mr. Wilfrid Wheeler who hybridized this berry, and who has been known as the Strawberry King, is to speak at Horticultural Hall on June twenty-fifth and twenty-sixth, at three o'clock in the afternoon, on the cultivation of the strawberry. A free lecture on Saturday and Sunday afternoons at three o'clock.

There is a general call at this exhibition for out-of-door roses, and two prizes of thirty and twenty dollars offered "For the Most Artistic Decoration of Roses with rose foliage, to fill space not exceeding fifty square feet." We hope that this display of hardy roses will compare in beauty with the gardens of greenhouse grown roses exhibited in April.

There are silver and bronze medals offered for the best displays of hardy herbaceous flowers. Prizes of thirty and twenty dollars offered for achimenes, and smaller prizes for Sweet Williams, Perennial Larkspurs, and Campanalas.

We also hope that the classes for vegetables will be well filled. Beans, beets, cabbages, carrots, cucumbers, lettuce, peas and tomatoes are called for.

At all these exhibitions new and unusual flowers and vegetables are cordially received.

M. R. CASE.

Hillcrest Gardens,
May, 1921.

NEW DWARF SEEDLING BEGONIA

**BETTY FARR**

The neatest dwarf (6-7in.) everblooming **Begonia** with semi-double or double deep-cerise colored flowers.

Makes an ideal plant for bedding out or as a pot plant. Blooming from two inch pot up without intermission. Fine for basket work in all sizes. A plant the ladies go crazy over.

**Rooted Cuttings, $15.00 per 100**

**BETTY FARR, Stoneham, Mass.**

When ordering, please mention Horticulture

## THE RIGHT TO STORE RAFFIA

An interesting case has been on trial in New York, where the authorities have attempted to prevent McHutchison & Co. from storing raffia in their own building in excess of five tons, basing their action on a city ordinance which prohibits the storage of straw, paper, excelsior and inflammable animal or vegetable fibres in the form of scraps and clippings. As McHutchison & Co. usually carry in stock from 40 to 120 tons, they naturally contested the order vigorously, several notable nurserymen and seedsmen testifying for them. Decision is expected to be rendered June 13.

George Bate, receiver of the Smith Fetters Co. of Cleveland, Ohio, has informed the creditors that an offer of $2,000.00 has been made for the furniture, fixtures and merchandise, and believes that this offer should be accepted to liquidate the company as soon as possible.

# George Watson's Corner

"You in your small corner and me in mine."

According to Samuel A. Pennock there is a Yellow Druschki in Germany—not introduced as yet, but so far looks very promising. It is named Reinard Badeker, has large heavy buds, and stems two feet long. Mr. Pennock also thinks well of Claudius Pernet, which is another Yellow in the Druschki class.

To the boys behind the seed counter—a word of good advice from an old timer. Don't go to the horse show or the ball game on Memorial Day. Take a walk through Fairmount Park instead. The wonderful things you will see there, in trees and flowers and greenery, will be an inspiration to you; and what you learn will be of life-long advantage. Let it be a walk, mind you—not a ride, and stop and look and investigate everything you see as you go along. It may be the dactylis glonerata or the poa annua, the noble peony, or the beautiful rose, the little maple or the giant elm, the lovely orchid or the skunk cabbage; but whatever you see will be interesting and exhilarating, and will warm the hearts of your customers, if they have a minute to spare after getting their order filled, and the chances are you'll book another order for something neither of you thought of until that minute. Don't forget that!

"Holidays make me sick." That is the way the average wholesaler talks. He is worried to death getting ready for them and, when they are passed, he is wrung to a frazzle for days and days explaining other people's mistakes in the rush! Christmas, Easter, Memorial and Thanksgiving were awful enough. Then that Jarvis woman had to ring in Mothers' Day on them. Now I hear there's another one on tap:—"International Memorial Day"—November 11th. The poor old wholesaler—he has my sympathy. But, as good American scouts, let us all shout for July 4th. That day don't bother us!

### FLOWERS ADORN GOWNS

In London flowers are being much used as decorations for evening gowns. Many women are wearing them on either one or both shoulders. Trails of blossoms sometimes are used as supports to hold the blossoms over the shoulders and sometimes as a girdle.—Boston Record.

## MRS. CORA BELLE THOMPSON

The trade lost a valued and influential member early in May, when Mrs. Cora Belle Thompson, president of the C. B. Thompson Co., of Louisville, Ky., passed away. Mrs. Thompson was a skilled florist and an able business woman. She was connected with the Kentucky florist industry for nearly forty years. She was a member of the Society of American Florists, the Florists' Telegraph Delivery, and the Kentucky Society of Florists. Moreover she was not a member in name only, but took a deep interest in the affairs of these organizations, attending many of their conventions and taking part in their deliberations. The popularity of Mrs. Thompson was shown at Cave Hill Cemetery, where she was buried, for the number of friends and acquaintances around the grave was the largest that had attended a burial in that cemetery for many years. The commitment services of the Episcopal Church and of the Order of the Eastern Star were used. Surviving Mrs. Thompson are one son, Edward, who is connected with the firm, one brother, a granddaughter and several nieces and nephews, including Joseph L. Able, secretary and treasurer of the C. B. Thompson Co., Mrs. Nellie Able, one of the principal designers, and Miss Mary Schleeter, also connected with the firm for a number of years.

## A Smile or Two

### As She Liked

"Is Mr. Smith in?" inquired the visitor of the new clerk.

"No, ma'am."

"Can I wait for him?" asked the lady.

"Yes, ma'am, you can wait for him if you like," answered the clerk, "but he's been dead for a month."

### Having a Look

"I'm through with that fellow Bliffkins for good."

"You don't tell me. Why?"

"Last evening while we were passing his house he asked me if I'd like to come down in his cellar and have a look at his new furnace."

"And then?"

"It was a new furnace."

### But Not the University

Mrs. Edwin was showing Selma, the new Swedish maid, "the ropes." "This," she said, "is my son's room. He is in Yale."

"Ya?" Selma's face lit up with sympathetic understanding. "My brudder ban there, too."

"Is that so? What year?"

"Ach, he ban got no year, da yudge yust say, you Axel, sixty days in yail."

### Why He Came Late

Young John was late in attending Sunday school that particular Sunday and the minister inquired the cause.

"I was going fishing, but my father wouldn't let me," announced the lad.

"That's the right kind of a father to have. Did he tell you the reason why you should not go fishing on the Sabbath?"

"Yes, sir," replied John; "there wasn't bait enough for two."

### He Needs An Electrician

"I've been reading an article on electricity, William," said his wife, as she laid down the technical magazine, "and it appears that before long we shall get pretty near everything we want by just touching a button."

"It will not pay here!" said friend husband. "You will never be able to get anything that way."

"Why not, William?"

"Because nothing would ever make you touch a button. Look at my shirt."

## JAMES F. M. FARQUHAR

In the death of James F. M. Farquhar the horticultural world loses a very able, prominent and popular member. Although Mr. Farquhar had been in ill health for eight years, his work in and around Boston in former days is still well remembered. He staged some of the finest exhibits for his firm ever seen in this country. He was original, forceful and resourceful, and whatever he undertook was sure to be a success.

## RENTING BOUQUETS

This paragraph appears in a New York paper:

"That young woman that just passed by the shop rents a bouquet from me almost every day," said the florist.

"Rents a bouquet?" queried the customer.

"Yes, she hires a bunch of flowers for an hour or so nearly every day during the week," continued the florist. "You see, when she is having a man caller she seems to think that it will make an impression on him if she has a bouquet delivered while he is present. After he departs she returns the bouquet to me and I sell it. I only charge her a small amount for rental."

## NEWS NOTES

Mr. A. H. Wagland, the florist, of Lawrence, Mass., is putting up a new Stearns greenhouse 200 feet long. This house will be used for carnations. Mr. Wagland grows a large proportion of his own stock. The Wagland establishment is one of the most interesting and progressive in northern New England.

Fellman, the florist, recently opened a new flower shop at New London, Ct. The store is a handsome one, decorated in black and gold, and well equipped with up-to-date facilities.

James S. Garner and James H. Hay are to put up a new greenhouse at Lebanon, Ind., and expect to have it ready within the next sixty days.

## THE MUCH ABUSED CLIQUE

What is the clique? 'Tis the body of men
Who attend every meeting—not just now and then;
Who don't miss a meeting unless they are sick—
These are the men that the grouch calls "The Clique."

Who don't make a farce of that sacred word "brother";
Who believe in the motto to "help one another";
Who never resort to a dishonest trick—
These are the men that some call "The Clique."

The men who are seldom behind in their dues;
And who from the meetings do not carry news;
Who attend to their duties and visit the sick—
These are the men that the crank calls "The Clique."

But there are some people who always finds fault;
And most of this kind are not worth their salt;
They like to start trouble, but seldom will stick—
They like to put all the work on "The Clique."

## Principles and Practice of Pruning

By M. G. KAINS

Few practices in the handling of plants, especially fruit bearing plants, attract so much interest as do those of pruning. The accumulation of new knowledge has become very considerable, especially in the last decade, but it is necessarily so scattered that very few growers have access to it, hence the demand for a book as this, which shall present the really important features of these investigations as well as set forth the fundamental principles based upon the laws of plant growth. This volume is lavishly illustrated mainly by actual photographs of specimens which show good and bad practices.

After a few pages of introduction the author discusses Plant Physiology as related to pruning. A chapter takes up the Philosophy of Pruning, itself, a very interesting subject. Then follows a classification and clear discussion of Buds, very fully illustrated from life. How Wounds Heal is an exceedingly interesting chapter, as are also those on Prevention and Repair of Mechanical Injuries, Pruning Nursery Stock, Young Trees, Mature Trees and Odd Methods of Pruning and Training, Rejuvenating Neglected Trees and Practical Tree Surgery. There are 400 pages in all.

Price $2.50

## Plant Propagation, Greenhouse and Nursery Practice

By M. G. KAINS

We have had many inquiries from time to time for a reliable and up-to-date book on plant propagation, but were always at a loss to find any publication that we could recommend. The subject has been dealt with in fragmentary manner only in books that have come to our notice. So it is well that this new work has been issued, especially as it is both comprehensive and practical, and it should meet with a ready sale among plantsmen, nurserymen and gardeners. There are nineteen chapters covering in detail topics of germination and longevity of seeds, propagating by buds, layering, cuttings, grafting, etc., fruit tree stocks, scions, etc., and there are eight pages of condensed cultural instructions in tabulated form, covering annuals and perennials from seed, woody plants, evergreens, vines, bulbs and tubers, greenhouse and house plants, ferns, palms, water plants, orchids and cacti. The illustrations are numerous, comprising 213 figures and halftone plates. There are 322 pages well bound and on heavy paper, teeming with helpful information. It is a book which no cultivator can afford to do without. It is worth many times its price. Copies can be supplied from the office of HORTICULTURE at publisher's price, $2.25.

HORTICULTURE PUBLISHING CO.
739 Boylston Street Boston, Mass.

*Every Reader of "Horticulture" Needs*

## DR. L. H. BAILEY'S
# Standard Cyclopedia of Horticulture

Six large quarto volumes. More than 3,600 pages. 24 full page exquisite color plates. 96 beautiful full page halftones. More than 4,000 text engravings. 500 Collaborators. Approximately 4,000 genera, 20,000 species and 40,000 plant names.

IMPORTANT NEW FEATURES

**KEY TO IDENTIFICATION OF PLANTS.** This is a device to enable one to find the name of a plant. The name thus found is quickly referred to under its alphabetical location, where full information will be found in regard to it.

**SYNOPSIS OF PLANT KINGDOM.** This is one of the most important features of the new edition. It constitutes a general running account of the classes, orders, and groups of plants, with a brief sketch or characterization of 215 of the leading families comprising those that yield practically all the cultivated plants. These family descriptions give the botanical characters; the number of genera and species and the ranges; a list of the important genera; brief statements in regard to the useful plants; and diagrammatic illustrations.

**ILLUSTRATIONS.** There are 24 colored plates; 96 full page half-tones; and more than 4,000 engravings which serve as guides in the text.

**THE GLOSSARY.** This is an analysis of all technical terms that are used in the work and in similar works. It comprises botanical and horticultural terms with brief definitions.

**TRANSLATION AND PRONUNCIATION OF LATIN NAMES.** In Volume I is inserted a list of between 2,000 and 3,000 Latin words used as species—names of plants, giving the English equivalent or translation and the pronunciation.

**CLASS ARTICLES.** Special effort has been made to secure the best cultural advices for the plants requiring peculiar or particular handling. Here are some of the titles of these articles; Ants; Autumn Gardening; Bedding; Diseases; Drainage; Floral Designs; Formal Gardening; Hotbeds and Coldframes; Insects; Landscape Gardening; Lawn Planting; Orchards; Rock Gardening; Subtropical Gardening; Tools and Implements; Village Improvements; Window Boxes, etc.

**GENERAL INDEX.** The final volume contains a complete index to the entire work, enabling the reader to locate volume and page of any subject he has in mind.

WE ARE MAKING A SPECIAL CASH PRICE FOR THE COMPLETE SET OF $41.00

# PEONIES

## with an ancestry

Did it ever occur to you that PEONIES which had been PROPAGATED FROM a SELECTION of the STRONGEST and MOST VIGOROUS PLANTS OBTAINABLE WERE far SUPERIOR to THOSE which had been GROWN in a HAPHAZARD WAY and many times from plants that were of inferior quality?

The CHERRY HILL STRAIN is the RESULT of over FIFTY YEARS EXPERIENCE in GROWING and PROPAGATING from the BEST and MOST VIGOROUS PLANTS to be OBTAINED in THIS COUNTRY or ABROAD.

THIS, beyond question, HAS GIVEN us a STOCK that is of SUPERIOR MERIT, which fact can be honestly testified to by the many thousands who visited our gardens during the flowering season which has just passed.

YOU can MAKE NO MISTAKE IN getting the CHERRY HILL STRAIN OF PEONIES.

NOW is the time to place your orders for early fall delivery.

Vol. XXXIII JUNE 25, 1921 No. 12

## THE TALK OF THE TRADE

Hydrangea Trophee has made a lot of friends, and stock offered of this variety is quickly taken up. I mention a few growers whom I happen to think of at just this minute who grow this variety in large quantities and think very much of it. Such men as A. L. Miller, Jamaica, Long Island; Carl Hagenburger, Mentor, Ohio, and J. F. Edgar, Waltham, Mass., who are authorities on French Hydrangea, class this sort as one of the best.

There is another variety which is not so well known, but which, I understand, is exceptionally good. This is Demota. It has large double pink flowers and an excellent habit of growth, but stock is limited at this time.

Conditions through the east are very much against field grown carnation plants, and unless we have rain soon the plants will be badly hurt with spider; and aside from that they will average very small. A grower who is able to get his house cleaned out and planted early, even if he has to put in small plants, is the one who will gain this season. And this trouble with field grown stock is going to work out again to the point where the supply will be limited because it will be necessary in so many cases to use two or three plants instead of one. Anyone being obliged to buy field grown stock in the coming season had better get an early start or the stock may be used up.

It is now known definitely that Freesia Purity will be in short supply for the coming season. In most cases the advance orders have about taken up the stocks which had been reserved. This, of course, applies more to the larger sizes than to the small. It is more or less of a puzzle to know how the hundreds of thousands of Freesias are used up, but year after year the sale is increased, and it is certainly one of the most popular flowers offered in the retail stores.

Of course, it has many uses, and fortunately the price on bulbs has been kept down to a point where it is possible to handle them at a profit

Several weeks ago a meeting was held by the principal American importers of French Bulbs to discuss and give their opinions as to the prevailing conditions. After considerable discussion it was decided to cable the French exporters requesting them to so reduce their prices as to meet our present conditions. Up to the present writing I have not learned that a satisfactory reply has been received from the French exporters, but I am strongly of the opinion that they will be obliged to come down off their high horse. There is no question that large quantities of Paper-whites can be sold, and will continue to be handled by the growers so long as they can do so and make a profit, but if prices on Paper-white narcissi go up above those of the past two or three years, there will be nothing in it, and the very best thing in the world, to my mind, to do is to cut out the orders. It's doubtful if it is costing any more to grow Paper-whites in France this season than the past two seasons, and so far as I am able to understand, no real sound reason can be found for this contemplated boost in price which France is trying to push onto the American buyers.

Display Staged by T. C. Thurlow's Sons, Inc., at the Boston Peony Show

I know quite a number of growers of Paper-whites who handled them in large quantities in the past who have either cut them out altogether or who have cut down to only a few cases, just enough for a little local retail work.

Paul E. Richwagon, of Needham, Mass., is building a model range of glass. A. T. Stearns Co. is supplying the new material, and quite a bit of the iron work and piping is being taken from the old range across the street, which is being torn down. The town of Needham has taken the property where the old greenhouse stood to be used as a Memorial Park for Needham's sons who went overseas in the world war. Mr. Richwagon will have a palm house and display house, and two or three houses running off from the new office, for carnations and miscellaneous stuff. The arrangement of the houses is well carried out, and he will have besides a very nicely arranged store, ample room as a work room for making up and grading, storage room for boxes, wire frames and all of the things connected with the retail trade, and further back there is a nicely arranged potting shed and boiler room. The new plant is located right on the main street, and there should be a very good trade calling for stock at retail.

Another who has joined the building ranks is A. J. Cartwright, in Wellesley, Mass. Mr. Cartwright in years past has been in the market, but has now started in as a grower, with the best wishes of all his friends. He will handle carnations largely, with a few miscellaneous lines such as delphiniums, snapdragons and calendulas.

Mr. George Buxton, of Nashua, N. H., is putting on the market this year the new geranium Mrs. George E. Buxton. I have seen this variety several times at different seasons of the year and it appears to me as a good one. It has a fine habit of growth, strong and vigorous, not too lanky and woody, and seems to be an easy one to handle. It carries large, double flowers, and the color is a very pleasing, lively rose pink. Stock of this sort will be ready in the early fall, and I don't think that there is much doubt about this geranium being found to be a good commercial sort, both as a potting plant and as a variety for bedding out. It has been tried out sufficiently to prove what it can do.

The florist from most any other part of the country visiting New York is at first struck with wonder at the different kinds of common wild flowers offered in the wholesale market, such as the common white daisy and meadow rue. A few weeks ago one would see great quantities of these two in particular for sale, and I sometimes have wondered if much of this stock was actually sold, but I find upon investigation that a lot of it is sold. In fact, we know very well it wouldn't be offered very often if there was no sale for it. The common vegetable asparagus is used for greens, and I have seen small bunches of about six flowers of geranium without any foliage at all, tied up in bundles and offered. But thinking this over I can see where a lot of good can be done even with such flowers. The multitude from New York's sections who can never get out into the country have no idea how common these flowers are, and they are attractive to them as well as the more strictly commercial flowers. And many times through these cheap offerings the future flower buyer is educated and got into the habit of wanting flowers.

For the first time in many years Taunton, Mass., has a well equipped and attractive flower store in the center of the town. Mr. Victor Olson, well known as a grower, is responsible for the new store, where he is doing an excellent business. In addition to flowers, he has recently been offering some excellent hothouse tomatoes, of the Comet variety. These tomatoes were grown in a new King house which was finished a little too late for carnations and so was utilized in a profitable way for tomato growing. I think that many florists often find it advantageous to grow a vegetable crop before they stock their houses with flowers. At one time Mr. Thomas Roland, of Nahant, produced a big crop of tomatoes in one of his long houses. Eventually this new house of Mr. Olson is to be used wholly for carnations, which he will grow in variety. He plans to meet practically all of his own needs except for roses. Indeed, he sometimes has a surplus to sell, as is the case now with Bonnafon chrysanthemums.

I am glad to find that a number of growers are realizing the possibility of making good money in the growing of geraniums. Mr. E. W. Pearson, of Newburyport, is among the latest growers to take up this line of work. He is getting together a large stock and will be in a position in a few months hence to put it on the market. The demand for geraniums never seems to be met, and year after year a shortage is reported. This fact alone ought to be sufficient inducement to stimulate their production in greater quantities.

## THE DUTCH BULB CROP

The following, written by a member of a well known Holland firm, is doubtless an accurate report on bulb conditions in Holland:

"The early spring and the general fine weather made the expectations of a first-class crop become almost a certainty. Then, however, the dry weather set in. For weeks we have not had any rain of importance, and if this does not come soon bulbs may turn out to be much smaller than last year. The outlook for the present is as follows:—

"Hyacinths are generally good, although in a great number of fields they show signs of suffering from drought.

"A lot of early tulips have suffered very much and there will be harvested a smaller bulb than last year. Darwins are generally looking better.

"Crocus are dying off quickly and only a medium crop may be expected.

"On the lower laying fields a good crop of narcissi is expected, whereas in other districts only a medium crop will be harvested.

"Anemone and Ranunculus suffered from dry weather and the same may be said of the greater part of the miscellaneous bulbs."

## LADIES' SOCIETY OF AMERICAN FLORISTS

The President of the Ladies' Society of American Florists, Mrs. George Asmus, has made the following appointments for the convention, which will be held in Washington, August 15th, 1921:

Auditor, Mrs. C. C. Pollworth, Milwaukee, Wis.; Introduction Committee: Mrs. Z. D. Blackistone, Mrs. George H. Cooke, Mrs. C. Schellhorn, Miss Amelia Gude, and Miss Louise Gude.

MRS. ALBERT M. HERR, Secy.

## FIFTY THOUSAND ROSE PLANTS SHIPPED

News dispatches announce the shipment of 50,000 rose plants from the establishment of Joseph Hill Co., Richmond, Ind., to Amling Bros., Santa Ana, Cal. An entire refrigerator express car was used, and the varieties included Premier, Columbia and Mme. Butterfly. The plants, it was stated, are to be used for propagation purposes.

## AMERICAN PEONY SOCIETY

### A. H. Fewkes Elected President at the Annual Meeting in Boston

The annual meeting of the American Peony Society was held at Horticultural Hall, Saturday evening, with an attendance of about 85. It was preceded by an excellent banquet at which Pres. Bonnewitz called upon several prominent peony growers for remarks. Mr. Bonnewitz is an ideal toastmaster, a ready speaker, and is possessed of a splendid voice. He spoke very enthusiastically of the Peony Society's future, and then called upon Mr. R. T. Brown, of Queens, N. Y. In his remarks Mr. Brown paid high tribute to James Wheeler, manager of the Boston show, calling him one of the best show managers in the country.

Mr. Wm. Peterson, the well known peony grower of Chicago, was introduced by Mr. Bonnewitz as the biggest man in the peony business, the allusion being to his massive build. Mr. Peterson acknowledged the remark by saying that not long ago someone had inquired if he was above the timber line. He caused another laugh by his description of the excellent banquet served. He said that there used to be a sign in one of the western national parks which read: "Meals, 50 cents. Square meals, 75 cents. Carriages for the Royal Gorge, $1.00." Mr. Peterson spoke of a recent visit to a show in Minneapolis of the northwestern peony and iris society, and said that according to reports he had heard Lemoine's disease could be successfully overcome by lifting the plants and allowing them to remain on the surface of the ground for a week. He urged the growers to soft pedal on new varieties and hoped that while elimination was going on at the bottom there wouldn't be too much addition at the top.

Mr. John Wister, of Philadelphia, spoke in praise of single tree peonies. He said that Mr. Farr was grafting them on herbaceous roots in August and getting good results. Mr. George N. Smith, of Wellesley, discussed his experience in the business and received a warm welcome. Mr. Smith was in better humor than he might have been perhaps the next day, as on Sunday morning a fire did considerable damage to a new Nash car in which he had expected to convey some of the visitors to well equipped peony gardens around Boston.

Mr. James Boyd, of Philadelphia, spoke about the difficulty in finding suitable labels. He said he was now using an embossed label which worked very well, but that he liked the labels he had seen at Cherry Hill Nurseries, which consisted of pieces of zinc painted white and then written on.

Treasurer A. H. Scott reported 408 members and a good balance in the treasury. Prof. A. P. Saunders, the secretary, gave his report. He said that there was a need of more seedling Japanese varieties as the public in general desired them very much. He regretted the lack of exhibits of the amateur growers, and said that some way would be found if possible to correct this lack. He also proposed the holding of two shows each season, one in the north and one in the south. This matter was discussed to some extent and then left to the directors.

Mr. W. E. Saunders, of London, Ont., then extended a cordial invitation to the society to hold its next convention in that city, and after some discussion it was so voted.

The election of officers was then taken up, with a result as follows:

Pres., A. H. Fewkes, Newton Highlands, Mass.

Vice President, Harry A. Norton, Ayers Cliff, Quebec.

Secretary, Prof. A. P. Saunders, Clinton, N. Y.

Treasurer, A. H. Scott, Chester, Pa

Director, A. M. Brand, Faribault, Minn.

## COMMERCIAL GROWERS MEET

A meeting of the Commercial Peony Growers' Association was held in Boston last Saturday night, and a number of important matters taken up. Among other things given attention was the question of standardizing prices to some extent. As conditions are now, a certain variety may be listed by one grower at $5 and by another at $25. It is proposed to have each grower submit a price list to all other members of the association each year. With the lists before them the different growers will be able to meet on more or less common ground and equalize prices to a much greater extent than at present. The question of weeding out inferior varieties is also being considered by this association. The president of the Commercial Peony Growers' Association is Bertrand H. Farr, of Wyomissing, Pa., the secretary, Winthrop H. Thurlow, and the treasurer, A. M. Brand.

It is announced that Alb. N. Volz, of the Volz Floral Co., New Britain, Conn., is planning a new office and store on West Main street.

### S. S. PENNOCK IN EUROPE

#### An Interesting Description of Conditions as They Exist in Germany

Mr. S. S. Pennock, of Philadelphia, is now actively engaged in the mission of the American Friends' Relief Service committee in Germany. In a recent letter Mr. Pennock said that he had been invited to act as judge at the Rose Show at Bagatelle Gardens, Paris, June 15.

In describing conditions in Germany he says:

"Upon entering Germany, one is confronted not with how poor things look but how well and prosperous everything seems on every hand. This, of course, is one's first impression, as only the better parts of the cities are visited, the better hotels, the better stores, the busier parts of the towns, the better people, presenting as it does, the very best side of Germany's condition. A survey of the surface means very little and not till one gets down to the lower walks in life and the poorer sections of the towns and cities, does the realization come to him of how much is needed the feeding which is now being carried on for the undernourished school children, little children and mothers.

"In the industrial cities the conditions are worse than in other towns. Not only is this so in the larger cities but in the smaller industrial towns as well. The industrial centers have a large percentage of foreigners who are not nearly as sanitary in their habits and home life as the Germans, which accounts in a large measure for the poorer and under-nourished condition of these centers. The food situation, according to all information, seems to be less acute than it was, excepting the milk situation, which is not at all encouraging. When milk is to be had, it is too thin and not as nourishing as it should be.

"The clothing situation has been very serious and is becoming still more so, as all old clothing is wearing out and to buy new is next to impossible, owing to everything's being so high, not only ready made clothing but the raw material as well, so they are in many cases just existing as to clothing; many of the children are without underclothing. In one school 75 per cent of the children had no underclothing and it was bitterly cold. The teacher said the women of the town would be glad to make clothes for the 'kiddies' but it was impossible to purchase owing to high prices of raw material to be made up. It would make the townspeople feel that they were doing their share towards relieving the situation, make them a party to the relief, a share in the work would make far better conditions in the community.

"The question has often been asked in America, why don't the German government do something to help conditions with its poor. The German government and its people are helping and very materially helping. The government is supplying 42 per cent of the food-stuffs, eliminating custom charges, paying all costs of warehousing, shipping transportation, insurance, looking after the cooking and distribution of the food, in fact, all the handling; thus more than 50 per cent is contributed by the German government.

"Many expressions of gratitude and approval of the work as carried on are heard. In the Essen district, District 1, which is the largest in population of the eight districts of Germany and almost entirely an industrial district, are received letters of all descriptions, some pathetic, some amusing, some entirely of gratitude, some from the children, some from the workers and some from the German officials, often very interesting and illuminating photographs."

### THE MARKET

The market during the past week has been surprisingly good. No doubt this has been due in a large measure to many weddings and to graduation exercises. A big slump is looked for during the week to come. Roses, which have been especially in demand, have been excellent in quality, considering the season. Prices for 9's have been from 3 cents up except for whites, which have brought 10 cents or more. Carnations are very poor and small. They sell from 2 to 4 cents. Peonies are out of the market. Gypsophila is in good supply at 50 cents a bunch. Sweet peas are not very good. They are bringing from $2.00 to $4.00 a hundred. There are plenty of delphiniums at $1.00 a bunch. Snapdragons are plentiful, poor and cheap. On the whole the market has cleaned up well, but at only average prices. With roses, for example, the extra large ones have not worked up into much more money than those which were small.

Mr James Singer, well known to most members of the Gardeners' and Florists' Club of Boston, dropped dead in an office in Lynn, Tuesday, June 21.

Mr. John Farquhar, of Boston, lectured Wednesday at Summit, N. J.

# ADVERTISING AND SELLING

Isn't it possible to increase the honeymoon trade at this season of the year? Many advertisers are doing special advertising, and that of course helps. Henry Penn, of Boston, has struck rather an original note in having a famous actress pose for a picture which illustrates a beautiful wedding bouquet. After all, it is mostly a matter of setting the facts before the public in such a way that the public will have its interest aroused.

How about using a honeymoon card? By such a means it may be possible to start newly married couples trading at your store. It is a fact without dispute, I think, that business friendships made during the honeymoon are likely to be lasting. The honeymoon card might read something like this: "As our concrete wish for your happiness through life we are sending you this card, entitling you to 5 per cent discount on all flowers in our store selected within thirty days from date" (the date being that of the wedding). You might have a typewritten letter prepared to go with each card congratulating the happy couple and suggesting that they use your store in remembering their friends, especially those who, like themselves, are just embarking on the matrimonial sea.

Here is another idea in this connection. It is easy enough to get the names of the married couples from the county clerk. Why not have the dates arranged by a filing system, and just before the anniversary of each wedding day, drop a brief note to the husband suggesting that he purchase a bouquet of flowers as a remembrance. Possibly you could offer a 5 per cent reduction on this occasion, also calling attention to the fact that you are doing this regularly each year. In this way there are live possibilities of building up a feeling of friendship between the prospective buyer and the store which is likely to become remunerative in the long run.

## SOWING SWEET PEA SEED.

By William Gray

It is a well-known fact that, if conditions are favorable, Sweet Peas sown in the fall give much earlier and finer bloom than those sown in the open in the spring, but few localities are favored with climatic conditions suitable for fall sowings in the open to winter successfully and the practice is a hit or miss even with the most expert growers. Spring sowing to the open has been the general practice followed, and this also has its faults inasmuch as it does not allow sufficient time for the young plants to become thoroughly established before warm weather sets in and in consequence inferior blooms are the result.

The pot method, however, overcomes all these uncertainties, the seed being sown either in the fall or during January or February and wintered in coldframes or cool greenhouse. If sown in the fall it is best to sow not later than October so that the young plants may become established in the pots before the short days of year arrive; later sowings will be inclined to weakness owing to the absence of the sunny conditions necessary to build up vigor in plant life, and much better results will be had by waiting until the middle of January when, under the influence of longer days with increasing sunlight, strong, vigorous plants can be grown.

The seed may be sown directly in the pots, one seed to each pot or several according to the size of the pots, or the seed may be sown in pans or flats and afterwards transplanted to the pots. If the highest culture is aimed at it is preferable to grow a single plant in each pot, plants grown from fall sowings being carried up to the end of January in 3 or 3½-inch pots, and then given a shift into 5 or 6-inch pots which will carry them through nicely until planting time in the open ground. On shifting, stick short brush in the pots to keep the plants upright. January and February sowings can be carried through in 3 or 3½-inch pots until planting time in the open ground.

Plants from fall sowings will bloom earlier and be at their best over a much longer period than January sowings, for the advantage gained lies in the earlier start which brings them into bloom the end of May, being at their best throughout June, a period more suitable to the Sweet Pea. January and February sowings come into bloom about the middle of June, being at their best at the end of the same month and early July, after which, owing to hot weather conditions, stems shorten up and flowers get smaller quickly.

No one, not even the amateur grower, need feel that the growing of the plants is a difficult operation. Fine plants can be grown in a well-protected coldframe in a sheltered position on the south side of a house or other structure that will break the cold winds. A 3 by 6-foot sash will cover sufficient plants to plant a considerable length of row, and will give a wealth of bloom for exhibiting or house decoration.

Local florists could find ready sale for plants grown from January sown seed, once their customers tried them out and were delighted with the results from planting plants instead of seed in their gardens.—American Sweet Pea Bulletin.

# PEONY SHOW AT BOSTON

## An Important Event with the American Peony Society Co-operating.

While the flowers would have been in better condition if the show had been held a week earlier, the peony exhibit in Boston, Saturday and Sunday, was still a decided success, and attended by a large number of people. It was a joint exhibition of the American Peony Society and the Massachusetts Horticultural Society. Without doubt the exhibits would have been larger if the weather had not forced the flowers too rapidly. As it was, several classes were vacant, and the blooms as a whole were smaller than at many previous shows. Nevertheless, some remarkably fine flowers were displayed, and the public was impressed with the keeping qualities of the peony.

Undoubtedly the feature of the show was the exhibit of the Cherry Hill Nurseries, West Newbury, Mass. In fact, the show would have been a disappointment, from a decorative point of view at least, if this concern had not offered to stage an unusual display, both as to size and excellence. This display entirely filled the small hall, and was splendidly set off by a bank of cedar trees set against all four walls. The blooms were shown in tall wicker baskets, setting them off delightfully, and in the center of the room was a great bank of American laurel. In this display were many of the famous Cherry Hill seedlings, as well as other and better-known varieties. As was to be expected, the American Peony Society gave the Cherry Hill Nurseries a special vote of thanks for the work they did in making the show a success.

Another exhibit which attracted considerable attention was that made by Harry A. Norton, of Boston and Ayers Cliff, Quebec. Mr. Norton has about 450 varieties on his estate and from them he made a large collection which he brought to the show in a parlor car. Considering the lateness of the season and the way in which the flowers had to be handled, they were in remarkably good condition. The size and coloring of the blooms won much praise. Mr. Norton, who has seldom shown before, established himself as an exhibitor to be reckoned with. As a novelty Mr. Norton showed a bloom of La Lorraine Tree peony, the first ever shown in Boston. This peony, a French production, is a beautiful yellow.

One exhibit which greatly interested visitors contained Japanese single peonies in great number. This was an exhibit of the Cherry Hill Nurseries. Among the varieties which attracted special admiration was the Dragon, the Mikado, Eduard VII, White Lady, Tokyo and Isani Gidui.

Partly due to the fact that the annual meeting of the American Peony Society was held in connection with the show, the number of visitors from different points was unusually large. Included in the list were the following:

### List of Visitors

L. R. Bonnewitz, Van Wert, Ohio; James Boyd, Haverford, Pa.; A. P. Saunders, Clinton, N. Y.; Leonard Barron, Garden City, N. Y.; A. M. Brand, Faribault, Minn.; A. F. Faulkner, New York; W. O. Roy, Montreal, Canada; Harry A. Norton, Ayers Cliff, Quebec, Canada; Bertrand H. Farr, Wyomissing, Pa.; A. H. Scott, Chester, Pa.; R. T. Brown, Queens, N. Y.; Joseph J. Lane, New York; Dr. J. D. Smith, Dayton, Ohio; W. E. Saunders, London, Ontario, Canada; Wm. A. Peterson, Chicago, Ill.; Geo. H. Peterson, Fairlawn, N. J.; John C. Wister, Philadelphia, Pa.; James Pillow, Cold Spring-on-Hudson, N. Y.; Thomas A. Havemeyer, New York; Mrs. W. Crawford, Laporte, Ind.; Mrs. A. R. Springer, Topeka, Kansas.

J. T. Butterworth, of Framingham, had an exhibit of orchids which made a very deep impression upon visitors. The exhibit consisted entirely of Miltonias, which were arranged against a background of evergreens. The flowers were beautifully grown and beautifully staged. They were a striking feature of the show. The Butterworths have made a high reputation for themselves by the orchid exhibits shown by them in Horticultural Hall.

Another exhibit of note was made by Julius Heurlin. It consisted of a collection of seedlings of Iris Laevigatus. Visitors spent much time studying this collection, and Mr. Heurlin well deserved the prizes awarded him by the Horticultural Cociety.

Mr. Bertrand Farr, the famous peony grower of Wyomissing, Pa., lectured on peonies both Saturday and Sunday afternoons. Mr. Farr's great reputation was sufficient as a matter of course to win him a large and appreciative audience. Mr. Farr is always among the most sought-for men at these gatherings.

### The Awards

The awards of the American Peony Society were as follows:

Collection of more than 100 varieties, double, one bloom of each. First, T. C. Thurlow's Sons, Inc. The varieties shown included Pres. Wilson, soft rose pink; La Perle, bluish white in center, darker towards the edge; Milton Hill, delicate flesh color, of exquisite form; La France, soft pink; Marquis C. Lagergren, brilliant cherry red.

Collection of ten double varieties, three blooms of each. First, H. A. Norton with Le Cygne; Reine Hortense; Adolphe Rousseau; Mrs. Geo. Bunyard; Frances Willard; James Kelway; Felix Crousse; Martha Bulloch; Venus; Monsieur Jules Elie.

Twenty blooms, double, named, white and cream. First, T. C. Thurlow's Sons, with Madame Jules Dessert.

Twenty blooms, double, named, dark pink, one variety. First, E. E. Randall, with Madame Geissler. Second, T. C. Thurlow's Sons, with Sarah Bernhardt.

Six specimen blooms, double, named, any variety. First, T. C. Thurlow's Sons, with Solange.

Twenty blooms, double, named, red or crimson, one variety. T. C. Thurlow's Sons, with Eugene Bigot.

One specimen bloom, double, any variety. First, H. A. Norton, with Festiva Maxima. Second, T. C. Thurlow's Sons, with Avalanche.

Collection of not more than 50 named varieties, double, one bloom of each. Silver Medal and $25.00 awarded to F. T. Donahue. His exhibit included Kelway's Glorious; Raoul Dessert; Phillipe Rivoire; Le Cygne; Beranger; Jeanne Gaudichau; Walter Faxon; La Lorraine; Kelway's Queen; Solange and Tourangelle.

Twelve blooms, two varieties, double, named, six of each. First, H. A. Norton, with Festiva Maxima and Therese.

Best six blooms, double, named, light pink, any variety. First, H. A. Norton, with Therese. Second, R. A. Morse, with Grandiflora.

Best six blooms, double, named, red or crimson, any variety. First, H. A Norton, with Felix Crousse.

### Massachusetts Horticultural Society Awards

John Allen French Fund. Collection of 20 varieties of double Herbaceous Peonies: First, T. C. Thurlow's Sons Company.

Collection of 12 varieties of double Herbaceous Peonies (Non-commercial Growers only): Second, R. C. Morse.

Collection of 6 blooms of pink Peonies (Non-commercial Growers only): First, E. E. Randall; second, Wilton B. Fay.

Collection of 6 blooms of white peonies (Non-commercial Growers only): First, E. E. Randall; second, Wilton B. Fay.

Appleton Gold Medal: J. T. Butterworth, for Decorative Display of Miltonias.

Honorable Mention: Rachel A. Butterworth, for decorative display of cut orchids: Blue Hill Nursery, for collection of seedlings of Iris laevigatus.

Gratuity: Blue Hill Nursery, for collection of seedlings of Iris laevigatus, $10.00.

## HYBRID PHILADELPHUS

More beautiful than the species are some of the hybrid Syringas. The first of these to attract attention was raised in France before 1870 by a Monsieur Billard and is sometimes called "Sourvenir de Billard," although the correct name for it is Philadelphus insigniis. This hybrid is one of the handsomest of the tall growing Syringas; it has large, snow-white flowers in long clusters, and its value is increased by the fact that it is the last of the whole group to flower.

The largest Syringa in our northern gardens, where plants thirty feet high and correspondingly broad are sometimes found, appears to be a hybrid between P. coronarius and some unrecognized species. To this plant, whose history is unknown, the name of Philadelphus maximus has been given. Another hybrid called Philadelphus splendens appeared in the Arboretum several years ago and is supposed to be a hybrid between two American species, P. inodorus and P. pubescens. It is a large and shapely shrub with pure white, only slightly fragrant flowers an inch and three-quarters in diameter and borne in erect clusters. This hybrid is a free-flowering plant and when the flowers are open it is the showiest plant in the Syringa Group.

These early hybrids are the result of natural cross fertilization, and the systematic breeding in the genus dates from the time that Lemoine first crossed the Rocky Mountain P. microphyllus with P. coronarius and produced a plant to which he gave the name of P. Lemoinei. Lemoine then crossed his P. Lemoinei with P. insignis and produced a race to which the general name of P. polyanthus has now been given. Well known forms of this plant are "Gerbe de Neige" and "Parvillion Blanc." To another race of the Lemoine hybrids the name of Philadelphus cymosus has been given. This race was obtained by crossing P. Lemoinei and P. pubescens or some related species. "Conquete" is considered the type of this group. Other well known plants which are said to belong here are "Mer de Glace," "Norma," "Nuee Blanche," "Rosace," "Voie Lactee" and "Perle Blanche." Another race of hybrids with double racemose flowers raised by Lemoine and of doubtful origin is called P. virginalis. The type of this group is Lemoine's "Virginal." Other plants referred to it are "Argentina," "Glacier," and "Bouquet Blanc."—*Arnold Arboretum Bulletin.*

## Hotel Rates in Washington

Mr. Elmer E. Mayberry, Chairman of the Committee on Rates for the S. A. F. Convention in Washington, August 10-18, announces the following Hotel Rates:

| Hotel | S. Room | S. Room & Bath | D. Room | D. Room & Bath |
|---|---|---|---|---|
| RALEIGH | $3.00 to $4.00 | $4.00 to $7.00 | $4.00 to $6.00 | $5.00 to $10.00 |
| POWHATAN | $2.50 to $3.00 | $4.00 to $7.00 | | |
| NATIONAL | $2.00 to $2.50 | $3.50 to $4.00 | $3.00 to $4.00 | $5.00 to $6.00 |
| NEW EBBITT | $2.50 | $3.50 to $4.00 | $2.00 each | $3.00 each |
| FRANKLIN | $2.50 to $3.00 | $3.00 to $4.00 | $4.00 | $5.00 to $7.00 |
| CONTINENTAL | $2.00 to $3.00 | $3.50 to $4.00 | $3.00 to $4.00 | $5.00 to $6.00 |
| METROPOLITAN | $2.00 to $3.00 | $3.00 to $3.50 | | |
| HARRINGTON | $3.00 | $3.50 to $4.50 | $4.00 | $5.00 to $7.00 |
| ST. JAMES | $1.00 to $2.50 | $2.50 to $4.00 | | |
| WILLARD | $3.00 up | $5.00 up | $5.00 up | $7.00 up |
| WARDMAN | | $5.00 | | $8.00 |
| CAIRO | $2.00 to $2.50 | $2.50 up | $3.00 to $4.00 | $4.00 to $5.00 |
| SHOREHAM | | $3.50 to $5.00 | | $5.00 to $7.00 |
| WASHINGTON | | $4.00 to $6.00 | | $7.00 to $8.00 |
| ARLINGTON | | $4.00 | | $6.00 |

## MR. McCARTHY'S CREDITORS MEET

On Thursday of last week some sixty creditors of N. F. McCarthy, the well known wholesale florist of Boston, with nurseries and greenhouses at Montrose, Mass., held a meeting to consider his assets and liabilities. The meeting was called at the request of Mr. McCarthy himself, and the statement submitted showed that his troubles were due wholly to lack of working capital. It was made plain that he was absolutely solvent if the business were allowed to proceed. After general discussion the creditors appointed a committee consisting of W. H. Elliott, Thomas Roland, William Hannan, J. M. Cohen and Clarence Blakely to investigate the assets and liabilities more fully and report at an adjourned meeting.

Sanford's Floral Hall, at Norwalk, Conn., run for many years by R. G Hanford, has been sold to South Norwalk florists.

James Hayes, Jr., has opened a very attractive new store at Topeka, Kans.

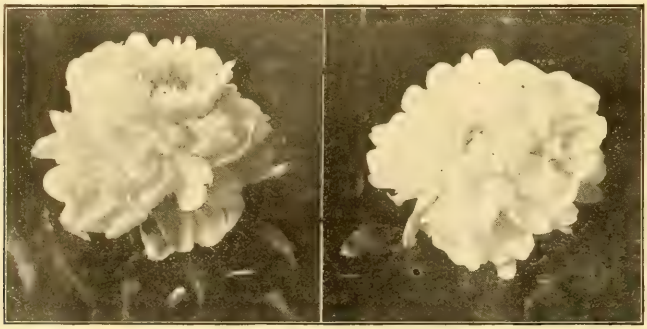
# RAMBLING OBSERVATIONS OF A ROVING GARDENER

It was a remarkable exhibit of peonies which the Cherry Hill Nurseries made at Horticultural Hall, Boston, Saturday and Sunday, and it was an unusual piece of enterprise which made this exhibit possible. Unexpected weather conditions were all against the peony growers. A week before the show was scheduled to open the flowers began to wane. Yet the Thurlow boys and Mr. D. C. Stranger, manager of the Cherry Hill Nurseries, had promised a record breaking exhibit. One entire room had been given over to them. What was to be done? The answer was found in an experience of the company at the time of the great show in Detroit. At that time a refrigerator car loaded with blooms was sent from West Newbury to the Michigan city and arrived in perfect condition. Forthwith a refrigerator car was ordered out from Boston and iced. The peonies for the Boston show were placed in it, thousands of them, and the car shifted to a siding. This was Tuesday before the show. Last Friday the car was unloaded at the hall and most of the night spent in setting up the exhibits, in order that it might be ready for the judges Saturday mornng. It was a remarkable piece of work and one in which, to a large measure, the success of the show was due.



---

Of course the cut for the Boston show by no means exhausted the supply of peonies at the West Newbury farm. I happened to be at the show in New Bedford on Wednesday of last week and found a big display of Cherry Hill blooms on exhibit there. They had been brought over the road in an automobile by G. C. Thurlow, who was on hand to stage them. And for the past month hundreds of people have been driving out to West Newbury to see the flowers. This feature of the business has become so important that a big tent has been erected in the nursery, where peony blooms in great variety are displayed. It makes quite a little show in itself and is appreciated by people who do not feel like tramping through the fields. There are 6 acres of peonies at the Cherry Hill Nurseries, which means an extended walk if one views them all. One feature of the lay-out at Cherry Hill always attracts the admiring attention of visitors. There are evergreen hedges everywhere, and such hedges as can be found in few other places. Some of them were planted years ago and now tower high into the air. All have a purpose, acting as shelters and windbreaks, but they are quite as aesthetic as they are utilitarian.

The peony fields at Cherry Hill are separated into several distinct plantings. Among others there are three trial gardens, where practically the same varieties are grown. As it happens the soil conditions in each garden are different, offering an opportunity to learn the behavior of the plants under varying circumstances. An effort has been made to obtain plants of the same variety from many different sources and to grow them together. In several instances this plan has revealed the fact that some of the plants were not true to name. Nothing is used to propagate from until the plant has been seen in flower and not then unless it proves to be a flower of quality. According to Mr. Stranger there is a very great difference in strains of the same peony. It may be weak or it may be strong, depending upon how it has been bred and grown. At the Thurlow establishment a distinct strain to be known as the Cherry Hill strain of peonies is being developed. The company is staking its reputation and its future upon it, and to make good the members of the firm are watching every plant in their fields with the closest scrutiny.

---

This nursery at West Newbury is an old one. The farm itself has been in the Thurlow family for 10 generations. The father of the Thurlow boys began collecting peonies 50 years ago. In the seedling plot there are varieties which were sown 20 years ago. And these seedlings, by the way, are among the most interesting flowers on the place. Not a few of them are bound to be grown far and wide. The first variety offered, "Cherry Hill," a magnificent red, has already been widely disseminated. Another new peony, President Wilson, promises well. Offered first at $25, the demand soon became so great that the price had to be doubled to keep the stock from being exhausted. Still another variety, but one not named as yet, I believe, has the merit of blooming extremely late. It is found in good condition even after Solange has dropped its petals, and Solange has long been considered among the latest of all. In the seedling garden at Cherry Hill less than a hundred varieties are to be found, but they have been selected from 300,000 seedlings, which indi-

cates that they must be pretty good. Probably about 50 of these seedlings will eventually be put on the market. Many of them bear only numbers now, but experts who have visited the nursery believe that in this list are some of the finest kinds ever put out.

---

The First National Bank, of St. Paul, ought to be held up as a shining example of service which such an institution can do for the benefit of flower lovers. This bank, which is a very large one, conducts a series of flower shows throughout the summer, the exhibitors being amateurs of St. Paul and Minneapolis. The peony show held a week or two ago was largely attended, and according to Mr. William A. Peterson, the prominent peony grower of Chicago, who happened to be present, the exhibit compared favorably with those shown anywhere else. The bank has a very large lobby where the flowers are staged, and at this peony show the room was made unusually decorative by the use of cornucopias filled with blooms of various kinds and placed at intervals here and there. The judge was A. M. Brand, of Faribault, Minn., perhaps the most famous peony grower in the west.

There are banks in the east which maintain agricultural departments and do much for the farmers, but I know of none which has made an appeal like this to flower growers and flower lovers. It would seem as though the example of this St. Paul institution might be emulated by banks in other sections.

---

When all is said and done, there is no doubt of the fact that peonies grow remarkably well in the soil of Minnesota and surrounding states. Perhaps that is one reason why this particular flower is so high in favor with amateurs. No fertilizers of any kind are required and it is a well known fact that the flowers of the west are famous for their size. In many sections the land used was formerly covered with forests, and the ground is filled with humus resulting from the decay of leaves over a period of centuries. Even commercial growers do not need to use fertilizer in soil of this kind.

---

I was interested to find Eremurus growing in Mr. Heurlin's nursery at Braintree, Mass., with all the freedom of the common yucca, although many gardeners find this stately and imposing perennial rather difficult to handle. Mr. Heurlin says that in his opinion these plants are often coddled too much. In his nursery they are planted where they get some protection from trees, but otherwise receive very little attention. Possibly Eremuri need shifting to new ground occasionally, for I know that in some private gardens much difficulty is found in growing them. They are very impressive plants, though, and would seem worthy of wider planting, especially in large gardens where there is plenty of room for their development. They look best against a background of trees or tall foliage

### WESTCHESTER AND FAIRFIELD, CONN., HORTICULTURAL SOCIETY.

The most important show of the year will be held by the Society, in New Rochelle, N. Y., on Sept. 21-22. This show will be held for the benefit of the New Rochelle Hospital. Practically every estate owner throughout the county has pledged his support and all the prominent ladies are taking an active part to make it a success. The main schedule will be a regular encyclopedia and well worth keeping for future reference.

Mrs. De Lancey Kane of New Rochelle is president of the committee, Mr. J. H. Troy of New Rochelle, manager of the show, and Mr. Oscar E. Addor of Larchmont, secretary. For space in schedule and preliminary schedule, address the secretary.

OSCAR E. ADDOR.

## STANDARDIZED PLANT NAMES

### Report of Harlan P. Kelsey for the Committee on Nomenclature at the Nurserymen's Convention

At the convention of the American Association of Nurserymen being held in Chicago as we go to press, Harlan P. Kelsey, of Salem, Mass., presented a very important report for the committee on nomenclature. This report is as follows:

Your chairman is secretary of the American Joint Committee on Horticultural Nomenclature and a member of the sub-committee doing the actual work of preparing the new official catalog of Standardized Plant Names; the other members of this sub-committee are United States Botanist Dr. Frederick V. Coville and Frederick Law Olmsted. While the chairman of the joint committee, J. Horace McFarland, has been in constant consultation with this sub-committee.

The sub-committee has finished its labors so far as preparing the initial copy for the forthcoming edition is concerned, and now follows the job of printing and distributing.

This sub-committee has spent literally months in a most difficult, trying and laborious task, that both scientific and common plant names may become standardized in the American Horticultural world, toward the desirable end of making buying easier.

As the sub-committee got deeper and deeper into this work they began to realize more fully that they were up against a man's size job in every sense of the word and that only by giving solid time in approximately ten day units would it be accomplished. Even then it would not have been possible to get ready for the printer this spring had not Dr. Frederick V. Coville and the United States Department of Agriculture fully backed up the committee's work by providing offices and almost unlimited library and office assistance, and the aid of many experts in the department.

The result is manuscript for a book of probably 500 pages, which the sub-committee has placed with the McFarland Company for printing, feeling certain this action would be approved by the American Joint Committee; for in the preparation of this semi-technical work, the sub-committee found it absolutely necessary to have constant advice and help in the matter of type and make-up from the printer who was to print it. Moreover, it was felt that accuracy, so far as humanly possible, should be a controlling factor, and that a press that had successfully printed Bailey's monumental Cyclopedia had pre-eminently the required organization.

The amounts subscribed by the constituent organizations of the American Joint Committee has sufficed to pay the current expenses of the committee and there is still a balance of $377.93 in the treasury of the committee.

But instead of a pamphlet we have a large book, which will cost from $4000 to $6000 to publish in numbers which will be at all adequate to insure wide enough distribution to accomplish our prime object, namely, universal adoption.

Therefore, it must be immediately decided whether the organizations comprising the American Joint Commitee will subscribe enough to finance the undertaking or, failing, will progressive nurserymen and other horticulturists underwrite the publication? Surely, this burden should not be placed on the sub-committee who have freely given months of their time to a most exacting and laborious job, that American Horticulture might profit thereby.

Attached to and made a part of this report are printed proofsheets which show better than I can tell it just what the new Official Catalog will be. You will see that it is a strictly alphabetical list of common names and Latin names for practically all trees, shrubs, fruits and perennials in the American trade today, and including many new ones which it is expected will soon be introduced to general cultivation.

Special groups supplied by organizations, societies, and individuals specially interested in such groups and best fitted to give authentic name lists, appear in alphabetical order, while certain large groups such as fruits, Iris, Rhododendrons, Azaleas and Peonies, which have extremely large lists of named horticultural varieties, will

appear suitably arranged in an Appendix.

Labor difficulties and high costs of material have combined to delay typesetting; but with these conditions clearing up, and financing arranged for, the work should reach publication before 1922.

It will be not only an absolutely necessary work of reference in every nurseryman's office, but a handbook and guide for every live employee in the field. It is a big beginning toward standardizing horticultural trade practice in America. Even to those who are entirely commercially minded it will be a godsend—for if it is consistently and intelligently used it means that the nurseryman and florist really will know what he is growing, advertising and selling; and, still more important, his customers and prospective customers will also know; and that means tremendously increased business.

Moreover, standardization of scientific and common names means a body-blow to the unscrupulous nurseryman, making deceit much more difficult, and detection and conviction more certain; and that in turn means more and better business for the honest tradesman.

The American Joint Committee on Horticultural Nomenclature should be a permanent committee, for many corrections and improvements must be made, and so long as Horticulture progresses so long will new plants appear and new names be necessary; while hundreds of plants of necessity still must have suitable common names supplied. Registration of new plants and approved names will become a necessity. If we believe in our business, let us waken to the fact that if we falter in the standardization of our business that Congress and state legislatures will attempt to do it for us—and disastrously to American Horticulture.

The sub-committee believes that underwriting this publication is a safe proposition, and that sales that may be reasonably expected should return cost. But if every nurseryman becomes a booster for the Official Catalog of Standardized Plant Names, sales should be such that the American Joint Committee would have a substantial profit to continue the work now so well begun. It's a business proposition and it's up to you.

For the Committee,
HARLAN P. KELSEY,
Chairman.

### AMERICAN IRIS SOCIETY

At the annual meeting of the American Iris Society in Columbus, Ohio, May 19-21, the officers were elected as follows:

President, John C. Wister, Philadelphia, Pa.; Vice-President, William A. Peterson, Chicago; Secretary, R. S. Sturtevant, Wellesley Farms, Mass., and Frank H. Presley, Montclair, N. J., Treasurer. Directors: Mrs. Horatio Gates Lloyd, Haverford, Pa., and Mrs. E. P. McKinney, Madison, N. J. The regional vice-presidents are I. S. Hendrickson, Flowerfield, N. J., eastern district; Mrs. Samuel H. Taft, Cincinnati, O., central district; T. A. Kenning, Minneapolis, Minn., northwestern district; C. P. Connell, Nashville, Tenn., southern district; Sydney B. Mitchell, Berkeley, Calif., Pacific coast district and Dr. E. Bennett, St. Thomas, Ont., Canadian district.

Mr. Scott T. Doten, for many years superintendent of the James J. Storrow estate at Lincoln, Mass., has resigned his position and bought a farm at Acton. He is succeeded by Edward Clapp.

**Supporting the Shows** It is a matter of surprise and also of regret that in many cities the florists as a whole apparently take but little interest in the flower shows. In many instances these shows come and go without a local florist entering the doors. We are sure that this is a mistake. It is impossible to really divorce the commercial and private interests, so far as the trade is concerned. To the average person, a flower is a flower, regardless of whether it grows under glass or under the open sky. And the more flower shows that are held, the greater the fondness for flowers that will be fostered, which means, in the end, more liberal buying.

Florists, nurserymen and seedsmen alike owe it to themselves to help along anything which will stimulate a desire to grow or possess flowers. In some cities the florists are found among the most active supporters of the local horticultural societies. They act as judges at the shows, and sometimes offer prizes to amateur exhibitors. This is as it should be and redounds not only to the credit but to the distinct advantage of the trade in general. It is a condition which ought to prevail in every city, and will when the florists themselves come to realize the obligations as well as the opportunities which lie in these shows.

---

**Co-operation That Counts** Why is it that co-operation among the florists in one city is an accomplished fact while in other cities it is mostly a theory. The answer is not easily found. It doesn't require much intelligence, however, to see that in cities where genuine co-operation prevails there is far better feeling among florists and a greater prosperity as a whole than in localities where the members of the trade fail for some reason to pull together as they ought to. Perhaps there is no better example than the city of Detroit, where the community flower shop idea has proved a distinct success. The florists linked together in the community flower shops are working together all the time. It is one of the agreements that each member shall visit some other shop in the chain each month, making whatever suggestions, criticisms or comments which may come to him. In this way many barriers are broken down, and each florist has a proper comprehension of the problems which come to his fellows in the trade.

Co-operative advertising has made it possible for these Detroit florists to give publicity not only to the florists in the combination but to the entire business throughout the city. During the week preceding Mothers' Day and Memorial Day, they created a demand for plants and other articles which was reflected in the business throughout that section.

Detroit illustrates remarkably well the value of co-operation in general. Moreover, the work that is being done there is being of enormous benefit to the F. T. D. The statement has been made by a prominent member of the trade, and probably with good authority, that F. T. D. business is increasing in greater proportion in Detroit than in any other city in the Union, and as a result almost wholly of the co-operation between the members. Certainly in time these facts will sink into the minds of the florists in other cities, who will be stimulated to go and do likewise.

---

**Reading for Business** It is an unfortunate fact that many men in the trade do not give the attention they should to the trade papers and to other literature which would be of value to them in upbuilding their business. It would be of great advantage, oftentimes, if the clerks as well as the proprietors should keep in touch with other members of the trade through these mediums. A writer in the Seed World has been investigating this matter to some extent, and reports one way in which results are obtained. He cites particularly the instance of one successful retailer as follows:

"This merchant has one of his clerks draw up a number of cards each month, and these are divided off into separate columns.

"He carries his various trade journals to his home with him evenings and there he reads them carefully from cover to cover. Every article or story therein that interests him, and which may carry such information as might be of value in the conduct of his business or to any of his clerks or department heads, is marked. Then the names of the particular clerks or department managers, the name of the magazine, the page on which the article appears and the title of the article, are jotted down under the proper headings as outlined above.

"The following day the journal is handed to the clerk or department head whose name appears first in the column designated for that purpose. After he (or she, as the case may be) has read the various articles marked for his attention, he signs his name or initials in the column headed: 'I Have Read This Article,' and then passes the journal and the card on to the next clerk. For the two years this plan has been in progress this merchant has been impressing upon the minds of his clerks the importance of not merely reading the articles, but of digesting their contents carefully and getting the very best out of them."

Which only goes to show that good trade journals live up to their purpose in life—and that purpose is to help its readers make more money out of their business. Give the papers a fair opportunity of doing so. If they lie around on the desk unopened, as is so often the case, or are merely glanced through with a casual eye, naturally they can be of little profit to business. Read trade journals for the betterment of your business, as you read your Bible for the betterment of your soul.

# "Montgomery's Priscilla"

That's the name of the new pink rose! The name will be "Priscilla" probably after the public has had it a while, but we have had to add the prefix to cover the rules of nomenclature.

In order to get someone who knows more about roses than we do to give an unbiased, honest opinion on the merits of this rose, we have placed 12 plants of it with each of the following rose growers:

E. G. HILL CO., Richmond, Ind.
DAILLEDOUZE BROS., Brooklyn, N. Y.
ALBERT H. AMLING CO., Maywood, Ill.
DUCKHAM-PIERSON CO., Madison, N. J.
ROWAYTON GREENHOUSES, Rowayton, Conn.
MILLER FLORAL CO., Farmington, Utah
WELLWORTH FARM GREENHOUSES, Downers Grove, Ill.
A. S. BURNS, JR., Spring Valley, N. Y.
ROBT. SIMPSON, Clifton, N. J.
CHAS. H. TOTTY CO., Madison, N. J.
NOE-RUZICKA CO., Madison, N. J.
WM. H. ELLIOTT CO., Madbury, N. H.
ANTHONY RUZICKA, Madison, N. J.
W. J. PILCHER, Kirkwood, Mo.
JOS. HEACOCK CO., Roeloffs, Pa.
WENDLAND & KEIMEL, Elmhurst, Ill.
JOY FLORAL CO., Nashville, Tenn.
ROBERTS ROSE CO., Denver, Colo.
GEO. C. WEILAND, Evanston, Ill.
LAKEVIEW ROSE GARDENS, Jamestown, N. Y.
BASSETT & WASHBURN, Hinsdale, Ill.
HARRY O. MAY, Summit, N. J.
F. R. PIERSON, Tarrytown, N. Y.
L. B. GODDINGTON, Murray Hill, N. J.
JOS. H. HILL CO., Richmond, Ind.
STEPHEN MORTENSEN, Southampton, Pa.

Ask them about it, if you will, at any time. They have our permission to tell the truth. We are going to let this rose sell itself! We shall be simply order takers.

A. N. PIERSON, Inc. Cromwell, Conn.

## SCRATCH

The following tale from The Keystone expresses beyond doubt the conditions of the florist of today as against former times and now more than ever illustrates why we should continue both our national publicity campaign as well as our local advertising.

We may not always find the road quite so smooth as at present and may need our reserves for future building.

Hence the story with the hope that many will get an inspiration:

"Once there was an Old Hen who had passed the time when she Needed to Worry about the Axe. She had helped many broods of Chickens to see the Light and had been, indeed, through the War. This Wise old Hen felt she knew All There Was to Know. This is a sad state to Get into.

"There came a season of Warm Rain and Lots of It, when the worms were washed out of the ground and lay in Lush Profusion about Her feet. She didn't have to scratch. The worms, and the delicious bugs, flocked about Her, and crawled over her feet, and she ate rapidly and needlessly.

"Came a time when she waxed exceeding Fat, and her appetite became finicky. She would strut about the Barnyard and kick bugs and worms out of her path, if they were not of the best variety. In fact, this Old Hen became mighty Choosy about her food, and many an insect bit her in the foot with impunity. She wouldn't deign even to look down.

"Then imperceptibly things began to change and the worms weren't quite so profuse as before. But the Old Hen knew that this was only temporary and that Good Times would soon return. So she leaned luxuriously against the barn door and dreamed cute little dreams about Hen Heaven and the Joys that were there for her.

"The Worms grew Scarcer and scarcer and the Old Hen began to lose some of her Surplus Fat. She finally had to dig into her Reserve Fat, and on that day she began to wake up to the fact that food was not going to Crawl Down her Throat as it had in the near past.

"So she leaned up against a tree and moaned, and Groaned over the Hard Times that had come. She grew thinner and more thin, until she staggered unseeingly around the barnyard, all out of sorts with herself and with the world. There was not a grain of hope left.

"She finally fell through the fence of the pigsty in a stupor, and lay there all skin and bones, crying as though her heart would break. 'Oh, dear, what will become of me! Oh, dear, oh, dear!'

"'What are you sobbing about?' said an old Fat Pig, who was rooting about in the rich brown mud. 'Oh, there is nothing to eat, and I am starving for food,' she moaned.

"'What rot!' remarked the pig, in his swinish way. 'No food, indeed! There are millions of worms for you right under the surface of all this nice brown mud, if you only had the gumption to scratch a little. Scratch for your grub, and you'll have plenty. Scratch, darn you, scratch.'

"And the Hen, being an old one, had sense enough to listen and to try the advice of the old Pig who was so fat, and Lo! she found that it was true. There were not so many Worms as in the Good Old Times, but there were enough to put flesh back on her bones, and pep back into her old muscles. Young hens wouldn't have had the gumption unless they were Exceptional Young Hens.

"Moral: Scratch early and often during the lean times. There are just as many worms, but they are harder to find."

HENRY PENN.

NEW DWARF SEEDLING BEGONIA

**BETTY FARR**

The neatest dwarf (6 in.) everblooming **Begonia** with semi double or double deep cerise colored flowers.

Makes an ideal plant for bedding out or as a pot plant. Blooming from two inch pot up without intermission. Fine for basket work in all sizes. A plant the ladies go crazy over.

## George Watson's Corner

"You in your small corner and me in mine."

Frank M. Ross, Mark Mills and party left recently for a month's vacation in the Poconos. We wish them all a jolly good time and trust the fishing will be quite up to their expectations.

Robert Craig excuses himself for not saying anything these days—by the doctor's route. He says the doctor tells him he has become "intellectually lazy," and that the best thing to do would be to take a rest. And Casper Pennock, another prominent grower of fine things for the wholesale market, on being asked how he felt on that Robert Craig verdict, said he didn't know, as he had never been accused of being intellectual. Another side-step! Wouldn't it jar you—the way these old boys side-step a straight question!

H. H. Baffles is like the man's coon trap, "Ketches 'em going and ketches 'em coming." At his Century shop he has "the best at the lowest," and next door at his Baffles shop he has "the best at the highest." So no matter how little or how much money a person may have, Baffles gets it, either way. If Lloyd George wants to take a vacation he would suggest H. H. Baffles as a good substitute in Downing street for the occasion. He's some diplomat, he is! We all take our hats off to him.

George Edmondson, the genial floor manager at 714 Chestnut street, the Dreer emporium, where you get all that's new and best for the farm and garden, has sold his racing boat and bought a Chevrolet. We extend our congratulations, and at the same time voice our personal regrets. When a man advances from the democracy of the boating game to the aristocracy of the Chevrolet, we fear he will not notice common folks like ourselves as we walk down Chestnut street. However, let us hope for the best.

Helen Buist passed away on the 14th inst. In married life she was Mrs. George Redford. Her husband died a good many years ago, and her brother, Robert Buist, the well known seedsman of Philadelphia, also pre-deceased her. She left no issue, and she did not have any interest in the Robert Buist Company, which is a corporation owned solely by the old employes.

Chicago, Ill.

Mrs. Redford was a most charming lady and during her long life highly esteemed by all who knew her.

Charles H. Grakelow is beginning to wonder why he has spent the best years of his life telling the public what wonderful influence flowers have in promoting human happiness. He feels that he has done too much for the public, or at least he says he does and he says that he is going to stop. According to my view of it about the only thing that will stop Charlie from doing as he's always done is for a high wind to blow down the Wm. Penn statue on top of him some day when he is passing City Hall in that twenty-five thousand auto the boys just gave him. That would be a calamity all right and Philadelphia would have to be humble for a while to Boston—like she was after the tea party. Boston has got pretty near all the conventions this year and we all pray that Philly may be kept on the map with Wm. Penn and Grakelow still on their jobs. The Parkway and the Wissahickon Drive are great in their way; but not enough—in all respects.

WHEN WRITING TO ADVERTISERS
PLEASE MENTION
HORTICULTURE

"There are months and months, June, July, August," according to Ed Richter, a Jersey specialist in the Philadelphia cut flower market. "You've got to be careful not to grow anything the market can't absorb. Sure, you can grow lots of things. Fine things. Splendid things. But what's the use? There's no demand during these three months. No, sir. What the wise florist does is to concentrate on early June: then make a big leap to September and October." That boy is about right, and some day—tell us more.

## PEONY AND ROSE SHOW AT NEW BEDFORD

Few cities of the size have a more enthusiastic lot of flower lovers than New Bedford, Mass., and for several years some excellent shows have been given there. A peony and rose show was held last week and largely attended. The judges were C. W. Young, of Boston, and Peter Murray, the florist, of Fairhaven. Among the most conspicuous displays was an exhibit of peonies from the Cherry Hill Nurseries and an exhibit of climbing roses made by A. J. Fish. A special award of merit was given to the Cherry Hill Nurseries for the seedling peony Pres Wilson.

### National Publicity Campaign

The Publicity Committee are getting their plans in shape for the forthcoming publicity drive in the magazines, their only anxiety now being as to the wherewithal for financing their effort. As has been said before, the money required must actually be in hand, hence their concern. A good many guarantees are still to be discharged, and once more we urge all those who have pledged themselves to send cheques covering their pledges without further delay. There has been plenty of evidence lately to show that the slogan is worth all we can expend on it. In cartoons, editorial headlines, and in other ways it has been featured. "They said it with Flowers" is now a common headline used to cover public functions of various kinds, and the dear public sis up and takes notice of it. The head of our nation was recently cartooned in a prominent New York daily as "Saying it with Flowers."

The campaign fund has been augmented by the following subscriptions since our last report:

| | |
|---|---|
| Fisher & McGrath, New Castle, Pa. | $25.00 |
| George W. Marshall, Okmulgee, Okla. | 5.00 |
| S. C. Derrick, Cooperstown, N. Y. | 5.00 |
| B. J. Macklin, Cambridge, Mass. | 5.00 |
| The Cleveland Cut Flower Co., Cleveland, Ohio | 50.00 |
| W. A. Worrel, Pocatello, Idaho | 10.00 |
| Eldred Flower Shop, Pasadena, Calif. | 10.00 |
| G. W. Frisch & Son, Dayton, Ohio | 10.00 |
| Hugo Teute, Rochester, N. Y. | 5.00 |
| Groffe & Dresel, Chicago, Ill. | 10.00 |
| W. E. Day Co., Syracuse, N. Y. | 10.00 |
| C. E. Rossiter & Son, Sunbury, Pa. | 5.00 |

| August L. Kroner, Quincy, Ill. | 5.00 |
| Electric City Conservatory, Great Falls, Mont. | 10.00 |
| Ben Boldt, Denver, Col. | 10 00 |
| | $ 310.00 |
| Previously reported | 25,188.60 |
| | $25,498.60 |

All who have not yet subscribed to the fund are assured that there could be no better time than now to render their support. The big publicity effort about to be made will be governed entirely by the amount of money available for it, and the greater it can be made, the greater the resulting benefit.

### The Washington Convention

The Ladies' Society of American Florists has prepared a folder which will surely interest the ladies who are thinking of attending the convention, and should convince not a few others that it would be a splendid idea to plan to make the trip. There is no more interesting city in the United States to visit than Washington, and with a large gathering of kindred souls in attendance at the convention it should prove doubly interesting. This folder will be mailed to our whole membership very shortly, with other printed matter concerning the gathering.

### The Trade Exhibition

The space available in the Trade Exhibition is going fast, and a banner show is already assured. The following names of exhibitors are in addition to those already reported:

Lord & Burnham Co., Irvington-on-Hudson, N. Y.
Baum's Home of Flowers, Inc., Knoxville, Tenn.
The Lima Sheet Metal Products Co., Lima, Ohio.
Hitchings & Co., Elizabeth, N. J.
S. H. Russin, New York City

March is completed, and plates ready for the printer, so that it is now only a matter of days before prints will be ready for mailing to those likely to be interested.

Although the guarantee fund covering the show's finances is practically closed, a subscription from W. D. Howard, Milford, Mass., is this week reported, making the fund total $20,657.00.

JOHN YOUNG,
Secretary.

June 18, 1921.

## ANOTHER QUARANTINE PROBABLE

The Federal Horticultural Board at Washington announces a hearing to be held June 28, at 10 o'clock, in the Entomology Building, on the advisability of prohibiting the further importation from Canada of cut flowers or entire plants of chrysanthemum, aster, cosmos, zinnia, hollyhock, and cut flowers or entire plants of gladiolus and dahlia, except the bulbs thereof, without stems, in addition to various vegetables. This quarantine is threatened on account of the European corn borer, which has been found in portions of Canada.

J. J. Turner, the nurseryman, will have charge of the horticultural exhibits at a merchants' carnival to be held in Beverly, Mass., in October.

SKINNER SYSTEM OF IRRIGATION

# Heacock's Hitchings House

The Joseph Heacock Co., at Roeloff, Pa., has three big iron frame rose houses. The last one is Hitchings Built. It is practically a duplicate of the recent Coddington houses at Murray Hill.
In fact, it was after visiting the Coddington range, and then looking over our factory facilities, that Mr. Heacock decided to place the order with Hitchings.

Mr. Coddington puts much stress on the way his gables are braced, and his freedom from glass loosening. In fact, we are happy to say that Mr. Coddington's oft expressed satisfaction has been the deciding factor a good many times, in the purchase of Hitchings Built Houses.

Having, in the last quarter of a century, built dozens of houses for Mr. Coddington, covering acres and acres, you can see why Mr. Heacock was influenced in our favor.

After all, what is more satisfactory than a satisfied customer? If you would like to hear straight from some of our satisfied customers, the reasons for their satisfaction, we will gladly arrange to call with you on as many as you incline.

And you know we go anywhere for business, or to talk business.

The Heacock house is 70' wide and 600' long. The gable centre door slides and has a door within the door.

## MR. REUTER'S NEW CONNECTION

### Well Known Plant Broker Will Now Handle the New England Business of C. U. Liggit

There is much interest in the trade in the consolidation just announced of the business heretofore carried on by the L. J. Reuter Co. with the plant brokerage concern of C. U. Liggit, of Philadelphia. For some time Louis J. Reuter, who grew up in the florist trade, and is known from one end of the country to the other, has been carrying on a very successful plant brokerage business, with headquarters at Watertown, a postal station of Boston. Of late the business has grown to so large proportions that expansion became necessary, and so the plan was put through of joining forces with Mr. Liggit, who is one of the most successful plant brokers in the country.

The new arrangement will give both parties new sources of supply to draw upon, and help to hasten deliveries. Mr. Reuter will maintain his office at Watertown, as in the past, and will give his attention to the building up of the New England territory. Although Mr. Liggit's office in Philadelphia will be the headquarters of the company, yet all New England business will be handled through Mr. Reuter, shipments being made from the nearest reliable source to the buyer. At the same time if it is necessary to go outside of New England for the goods needed, that course will be followed. In other words, Mr. Liggit's field of operations will be extended, putting him in a much better position than ever before to serve his customers; and Mr. Reuter will be enabled to develop his special field without being handicapped for lack of capital or any other restrictions. It seems like an extremely good arrangement for both of the gentlemen concerned, as well as for the trade in general.

## BULB GROWING IN CALIFORNIA.

James A. Brown of Brown's Bulb Ranch, Capitola, California, was recently quoted as follows:

"As to the idea that bulb culture is a failure in California, the sooner people in the East abandon that idea, the better. Last fall I visited a number of the European countries and there I found in Holland, Belgium and France the settled conviction that bulb raising was doomed to failure in California. Now I can understand their feeling that way in those old countries. They have been in the bulb raising business for two or three hundred years and they have grown to think that a new country cannot compete with their experience and skill, not to mention the difference of the climate. However, I told them that they were mistaken and I still think so. Very few people have any idea of the way in which freesias, Spanish iris and some other bulbs are being grown in the vicinity of Santa Cruz. Before saying that bulb raising is a failure in California, people ought to come and see our bulb farms. They speak for themselves."

## PEONY FAVORITES

In reading Mrs. Francis King's latest garden book I notice she quotes Mrs. William Harding as naming La Cygne, Walter Faxon and Solange as the three finest varieties in the peony world. It is very interesting to have this opinion from Mrs. Harding, but I am afraid that many fanciers would contend that either Therese or Kelway's Queen should have a place in this favorite trio. Certainly Lady Duff and Festiva Maxima would come a close second, and others are not to be overlooked. Moreover, there are some seedlings coming along which are likely to crowd the varieties very hard.

## THE TALK OF THE TRADE

It is about time now to be sowing sweet pea seed for winter flowering, and a fine lot of varieties are offered as the consequence of the great improvement in the past number of years in the strains of sweet peas offered by the specialists. Two novelties in particular are worthy of mention, i. e., Peach Blossoms and Flamingo. The first can be described in color best by its name. It is a beautiful pink, and is said to be a good producer, with long stems and flowers well set together. Flamingo is a bright colored salmon, shading to pink, and is also a very good producer. Of course, such varieties as Rose Queen and Yarrawa will be planted in quantities, as they always find a ready sale. Lavender King is an excellent lavender, but there has always been a call for a good true blue, and that we can have in the variety La Marquise.

There are several very fine bright colored varieties, such as Rose Bud, a bright rose; Splendor, a rich deep rose, and Dazzler, a lively orange. Of course, a grower who markets sweet peas only in limited quantities should confine himself to one or two of the best varieties. I always think of Rose Queen or Yarrawa as the ones which have the larger sale, but if enough room can be devoted to sweet peas, some of these other sorts will bring good results, and the retail stores are anxious for these colors.

---

I notice that California grown iris is offered this season, and I am anxiously waiting for the results from this stock. There is every reason to believe that it will turn out well. The crop is not large, but there is enough stock to be sent over from the coast to make a good thorough trial. If we can get good Iris Tingitana, as well as the other good marketable sorts, we are adding one other very popular flower to the list of those which can be produced at home and make us independent of foreign imports.

---

A few years ago Allman Nurseries, Holmesburg, Pa., started selecting from a pink Snapdragon which they thought an improvement over any then on the market, and this process of selecting has been continued, with the result that at the present time they are offering the new Snapdragon named Philadelphia Pink. It has made an excellent impression, particularly around Philadelphia, where it had been possible to observe it through the season. It has a very good bright shade of pink, and from what I have seen of it, I believe it is bound to be one of the popular varieties.

---

Leaf grown stock of Begonias Meteor, Cincinnati and Peterson is practically sold clean in 2¼" and 3½" size. This is particularly true of Meteor. There is hardly a plant left of that sort, and I believe there will be a good call for top cuttings. This stock will soon be ready, and if a grower can get well established 2¼" plants around August 1, raised from tops, it can be worked into good shape for combinations as well as for individual plants. Anyone who has not been able to work up enough stock of the earlier leaf cuttings will do well to prepare for what he needs by top cuttings.

---

I recently had the opportunity of calling on A. L. Miller, of Jamaica, L. I., and it has been such a long time since my last visit that I was decidedly surprised and pleased with the way this grower is advancing. The high building costs have not scared him in years past, nor is he holding back one bit at the present time. When I was there recently, the frames were up for several houses, and he is working fast to complete a range of six Lord & Burnham houses to be devoted entirely to plants. They are of the ridge and furrow type, a type which Mr. Miller

THE NEW GERANIUM, MRS. GEORGE E. BUXTON

believes in for neat and strong construction.

Mr. Miller has an excellent stock of Erica melanthera and ovata, and is going into Crotons in small sizes heavily. Several houses of these are coming along and are in excellent condition. He does not make a practice of finishing these in large sizes, but disposes of the crop in the fall in sizes 3½", 4" and 5" or more. I was interested to note the other crops he is handling. One plant in particular which he does very well and grows in quantities is Buddleia asiatica. These he sells in pans. He is also heavily stocked with French Hydrangea in pots and in the field, all sizes, and all the good varieties. I call it a mighty neat and prosperous looking plant establishment.

---

There is general satisfaction in the trade as to the plans of the committee which was appointed in connection with the business of N. F. McCarthy of Boston. It is hoped by everyone that this business will be able to continue and work itself out of difficulties which all trust are not more than temporary. Of the committee, W. H. Elliott and Thomas Roland will assist in increasing the output of the rose houses at Montrose and Clarence H. Blakely and J. M. Cohan and Miss M. C. Smithers will work with Mr. McCarthy in the management of the store and general commission business on Arch Street. It is believed that with careful management the assets can be so handled as to bring about good results and all creditors have been asked to agree to the plan as outlined by the creditors' committee.

---

In the last number I had something to say about the new geranium, Mrs. George E. Buxton, being put out by Mr. Buxton, of Nashua, N. H. I am glad that it is possible to publish in this issue a very good picture of this geranium, which is being widely disseminated and seems to be meeting with much approval wherever seen. There are none too many good geraniums and additions of merit are sure to be taken up.

---

Although Henry Penn is famous for his window decorations, it is seldom that he arranges a setting that attracts so much attenion as one which preceded the recent holiday. A certain Scotch organization had arranged for a picnic on the Fourth, with 83 silver cups to be awarded as prizes. These cups were displayed in Mr. Penn's window and featured by four youthful bagpipers, clad in the royal Stewart and McKenzie plaids and kilts. They were real Scotch children and knew how to manipulate the bagpipes with no little skill. During the day they gave selections on the pipes which called a big crowd of people together. As a background the window was massed with palms and wild pampas grass, and the whole exhibit attracted so many people that the sidewalk in front of the store was sometimes blocked.

---

One doesn't usually think of a painting as a feature of a florist shop, but Rogers, the Florist, of Allston, a Boston suburb, has displayed in a conspicuous place on the wall of his store an oil painting of a Dutch flower market, which attracts a great amount of attention, and probably helps bring trade to this store. Naturally Mr. Rogers prizes the picture very highly, as it is a gift from some of his many friends who decided that something of the kind would be an ornament to the handsome store which he now occupies. Somehow, things always seem to come Mr. Rogers' way, but that probably is because of his unfailing good nature more than anything else.

---

William Nickerson, of Framingham, Mass., always identified with carnations and always one of the best growers of all flowers for the Boston market, will devote his place this year largely to other lines. He has successfully handled a miscellaneous crop and has the reputation of bringing into the market some of the best stock in such lines as Snapdragon, Wallflower, Delphiniums and Sweet Peas, and I understand that this year these crops will be a large part of the output from his place.

---

## THE MARKET.

Now that the month of weddings is over, the market is very quiet. Stock is coming in slowly, and is just as slow in going out. Much of it, too, is poor in quality, this being especially true of carnations and sweet peas. The latter are off to an unusual extent, and it seems impossible to get peas of good quality, no matter what price is offered. Carnations are selling for two and three cents, roses from two cents up, gladioli from $1.00 to $1.50. Snapdragons are scarce and in considerable demand. There is now plenty of Gypsophila, both double and single, at the standard price of fifty cents a bunch. Marguerites are out of the market.

## TRADE CHANGES IN BOSTON

### Caplan to Greatly Enlarge His Store—Galvin in a New Back Bay Location

Several interesting changes have taken place or are under way among the retail flower stores of Boston. One of the most important is the announcement that Caplan, of 144 Massachusetts avenue, is going to greatly enlarge his establishment. Mr. Caplan has just renewed his lease for another fifteen years, on very favorable terms, so that he feels safe in branching out.

At the rear of his store is a piece of ground 60 feet long, and here a handsome ornamental greenhouse, costing about $10,000, is to be put up in the fall. The plans have already been drawn, and negotiations with greenhouse builders entered into. These plans call for one of the handsomest establishments of the kind in New England. It will be entered from the rear of the store, and will contain one large section to be devoted wholly to birds. Mr. Caplan has been specializing in birds for some time, finding that they work in well with his florist business. It is believed that this feature will do much to attract visitors.

There will also be plenty of room in this greenhouse for palms, ferns and other ornamental plants. Probably a new store front will be installed at the same time, so that the Caplan establishment will be one of the most conspicuous in the city.

Another change much commented upon is the removal by Thomas H. Galvin, Inc., from a location on Boylston street at the corner of Fairfield street, where it has been found for many years, to a new location on the same street at Copley Square. This, of course, will not affect the Park street store, which will remain where it is. The Back Bay store of the Galvin Co. has long been famous because of the large ornamental greenhouses attached. The building has often been photographed and used as an example of a modern florist shop.

The new store in Copley Square will not be so commodious, and will have no greenhouse. At the same time it will be more advantageously located. It is the place of business recently vacated by the Rosary, and is very accessible. Plans are now being drawn for the complete reconstruction of the store, which will be made very attractive, and which will be opened to the public about September 1. Pres. Boyle, of the Thos. H. Galvin Co., Inc., says that this new store will be quite as up to date and convenient as the store on Park street.

The Rosary, which has recently moved from the Copley Square location, opened its main shop at 749 Boylston street the first of July. The new store is light, airy and convenient. Manager Casey looks for no loss of business through the change, but rather an increase, as he is now in the heart of the automobile district, and has probably a larger trade among the automobile people than any other florist in the city.

## NEWS NOTES

D B. Clark, for many years a florist at Dubois, Pa., passed away recently at the age of 73.

James H. Nicholas, a well known florist of Springfield, Mass., was recently married to Miss Ruth C Tucker, of Pittsfield.

Receiver Francis Goodale, acting for the Waban Rose Conservatories, of Natick, Mass., has brought suit against Attorney W. Edwin Ulmer, former manager, seeking to recover sums of money which it is alleged Ulmer received from the assets of the concern.

Mr. Hartley Duffill, formerly with F. E. Palmer, Inc., of Brookline, Mass., has associated himself with Mr. H. P. Heminway, city planting specialist and landscape architect. His address in the future will be Kalamazoo., Mich. Mr Duffill, whose former home was at Melrose Highlands, Mass., has many friends in the trade who will wish him all success in his new connection.

Mr. William H. Siebrecht, of Chappaqua, N. Y., with extensive nurseries at Astoria, has recently purchased two acres of land near his home, and a 17-acre plot in a nearby section. It is understood that he will remove a part of his plant to Chappaqua.

Mr. Richard Fowler, formerly of Philadelphia, has taken charge of the J. Van Lindley Nursery Co., at Pomona, N. C.

Frank J. Sullivan, a florist at the Estabrook & Luby Shop in Worcester, Mass., is to be married on July 11 to Miss Loretta A. Luby, a bookkeeper at the same establishment, and well known in the trade.

## CATALOGUE COMMENTS

### Mrs. Francis King Has Some Interesting Suggestions and Valuable Criticisms

No garden writer of the present day is more frank in her comments, more keen in her insight concerning garden matters, or more entertaining in her way of setting forth ideas which come to her alert mind than Mrs. Francis King. In her latest work entitled, "Pages from a Garden Note-Book," Mrs. King discusses matters covering a wide range, and among the most interesting chapters is one reviewing the catalogues of many prominent seedsmen and growers. Some of the suggestions which she makes are worthy of serious consideration The chapter is too long to reproduce in full but a number of the most interesting paragraphs follow:

"Let us begin with the respective names of Dreer and Farquhar. Moderation in expression characterizes these two lists. a plant is desirable, very desirable, of pleasing color. Few superlatives are here to be met; as a result, the reader's confidence is gained and when an extra good thing comes in for high praise he promptly responds to the suggestion Farquhar is entitled to all praise for his courage in introducing the new Chinese and Japanese shrubs and plants The glorious Lilium myriophyllum, or as it is now called, Lilium regale, was brought out by this firm a few years since. most of the new barberries, cotoneasters, and other shrubs lately introduced into commerce have been first described and offered upon these pages.

"Taken as a whole, Dreer's is a fine catalogue, certainly one of the best. Mr W C Egan's cultural directions are always valuable So are Mrs. Ely's and the range in variety of seeds and plants is remarkable. To roses, dahlias, and hardy phloxes large spaces are allotted. Far too much space is given to illustrations I think here of a lively correspondent of mine who, deploring the frequency of poor illustrations in one of our gardening journals, wrote 'I am too old to be amused by pictures, and I know how to grow tomatoes in a tomato-can.'

"Since my eye first fell upon the list issued by the Palisades Nurseries, of Sparkill, N. Y., I have been less satisfied with the others upon my shelf. This list speaks to the intelligent gardener. It seems possessed of a certain accuracy, its color descriptions are among the best to be found, its explanations of the meaning of botanical terms or names are as illuminating as they are unusual; in fact, it is one of the only two of our catalogues approaching the scientific.

"Burpee's Annual brings with it, to every one who knew of Mr. Burpee, a sense of almost personal loss in his death in the autumn of 1915. Two fine young sons are now at the head of this great business, which is known first for its remarkable system of trials of seeds, and next for its many introductions of distinct varieties of flowers and vegetables, varieties which have proved their worth.

"A colloquial of colloquials in seed-list lore is Henry Field of Shenandoah, Iowa. There is no list so amusing as this, although in places it reminds us of Bees' list published at Liverpool, in which I think I always see an Irish hand! Read in Henry Field, page 55, 'Woman's Rights in the Garden,' and have as hearty a laugh as you have had for long. Yet, underneath the humor of it, notice the truth about the old garden tools on the farm, and on that subject, not confined to Shenandoah, Iowa, of a woman's having to ask her husband for every cent she spends.

"The Peterson Nurseries, of Chicago, issues a small list of irises of sixteen pages, which is absolutely the most beautiful sent out in the country, illustrating irises Monsignor, Purple King, Koenig Darius, and Lohengrin, which are really captivating in beauty. Shoup, of Dayton, Ohio, has a restricted but very handsome list of irises.

"Another excellent list in black-and-white is the peony list T. C. Thurlow's Sons send out, a dignified and excellent catalogue; and I happen to be old-fashioned enough to think that some of this dignity arises from the fact that the firm does no business on Sunday, even going to the point of excluding visitors from their grounds on that day. There is something specially frank and honest about the Thurlow list, as there is about those others of Lovett, of Little Silver, New Jersey, and of our friend, Frederick H. Horsford, of Charlotte, Vermont; and in this speaking I would not intend any unpleasant inferences; no, not at all.

"Farr's, of Wyomissing, Pennsylvania, is the largest of such lists as we are now considering, and this is a catalogue of great value. It is evidently the result of much research, reading and experiment; its list of variations in irises and peonies are so exhaustive and seem to be classified to such perfection, that I have come to turn to it as to a book of reference on these flowers. Its color-plates, too, are of uncommon excellence.

33 HAWKINS ST. :: :: BOSTON 14, MASS.

"Conard & Jones's is as colorful a catalogue as one may find; but the color of the great roses therein set forth seems to me to be particularly adequate, and their list is not only an all-embracing one but reliable. The wonderful new colors and types of cannas evolved by Antoine Wintzer, connected with this firm, are known the world over; alas, that the Department of Agriculture in Washington should yearly set forth, to this day, the abominable example of the round beds filled with cannas and edged with geraniums, as shown in this book.

"To sum up: the great lack in the American seed list is the lack of correct color-description. Superlatives in descriptive writing of flowers we pass good-humoredly by, for the very fact that there is not one of us, in the guild of gardening women, at least, who does not make use of these ourselves! Impossible to write or speak of beauty in measured terms. We must remember that enthusiasts write these catalogues. Yet no; on sober second thought, why should not our lists take on more restrained language and less flamboyancy of cover and illustration? So surely as our own plant and seed lists improve, so surely shall our gardens, the gardens of America, reflect this rise toward taste and knowledge in horticulture.

"Mr. E. H. Wilson declares that the lover of plants must and will have a larger voice in the variety that shall be grown in gardens. The solution of the present problem will be found in both amateur and dealer becoming more and more progressive. That the nurserymen and seedsmen want the amateur's suggestion and criticism I feel certain. At present all is too commercial. Commercial to an extent it must be; co-operative as between dealers and amateurs it must be, too, and more now than ever before, when the whole land is awake to the great occupation of gardening."

---

Frank Hobbs has purchased the Parkside Florist Shop, formerly conducted by Mrs. Sophie Stratton, at Parkside, near Camden, N. J. Mrs. Stratton is soon to join her family in California.

## SWEET PEAS

Sweet peas, the dear old-fashioned flowers our grandmothers loved to pick in their gardens. Their beauty has been treasured through the ages, for even in the old Egyptian days they were loved so that their seeds were found clasped in the hands of a mummy. Was it with the hope of planting them in some heavenly paradise? Whatever the thought of this Egyptian may have been four thousand years ago, I have recently been told by a friend that he felt nearer heaven when wandering by himself in a garden than in any church.

Yet the furbelows of fashion change even with sweet peas, for we are now getting them with new frills and fancies.

Of the best cultivation of sweet peas, Mr. Allen J. Jenkins, who won the Hillcrest Gardens Iris Cup for Iristhorpe, Shrewsbury, is well able to tell us and will speak on the cultivation of the sweet pea at a free lecture in Horticultural Hall, Boston, on July ninth and tenth at three in the afternoon.

Besides the prizes offered at this exhibition by Mrs. W. Scott Fitz for sweet peas, Miss Amelia Peabody gives prizes for rambler roses and Miss Adelia Williams, Mr. John D. Williams and Miss Alice W. Pearse, for fruits in season. Prizes are also offered for hollyhocks, iris, Kaempferi, perennial larkspurs, wild flowers and vegetables in season.

The interest felt in these shows is testified to by the crowds which attend them, twenty-seven hundred at the exhibition of rhododendrons, azaleas and iris, and about four thousand at the peony show, where all through the exhibition there was an atmosphere of pleasure and of enjoyment in the beautiful flowers displayed. Can this spirit of enjoyment go a little further so that those who visit the Horticultural Exhibitions and take pleasure in them will feel like becoming members of the Massachusetts Horticultural Society, that they may encourage the best cultivation of fruit and flowers, become members of the second oldest horticultural society in the world, and by joining it help to support it and make it possible to extend the pleasure and information it gives. The annual assessment is only two dollars and the life membership is thirty. Anyone wishing to join the Society can write to its secretary, Mr. William P. Rich, Horticultural Hall, 300 Massachusetts avenue, Boston.

M. R. CASE.

Hillcrest Gardens, Weston.
June 23, 1921.

# ADVERTISING AND SELLING

What would florists do without the telephone? Certainly it would be a tremendous disadvantage if they were deprived of this convenience. Isn't it possible, though, that the telephone might be made a bigger asset than it is even now? It has been suggested that florists might distribute attractively printed cards which can be hung over the telephone mouthpiece and contain some such words as the following:

> Ask the operator to reverse the charge when you telephone an order to our store. We will gladly pay for the call.
>
> Blank, the Florist

Probably any reputable florist can get the telephone company's agreement to such an arrangement, and in many places the inducement although of no great importance from a financial viewp int, will be sufficient to draw trade when it is simply a question with the customer as to what store she shall call up. In Boston, for example, no call can be made to the city proper from a suburban town outside the eight-mile limit without paying for the call. Now a large proportion of the people who buy their fl wers in Boston live outside this radius and such a card as the one indicated would be an excellent advertising medium among them. There are other ways in which this plan can be utilized, and there seems to be much in the suggestion worth considering.

It comes almost with a shock to find Casey, the Florist, of Melrose, Mass., following the lead of the shoe stores, clothing stores and other retail establishments, in announcing new prices effective at once on florist stock. Yet this is in line with the general trend of things, and there is no good reason why a florist shouldn't offer a reduction. As a matter of fact, the Casey advertisement is remarkably well put up, and must have attracted no little attention. It carries a handsome border, and "Say It with Flowers" is featured prominently at the top.

Then in black type appears the heading:

**PRICES OF BEDDING PLANTS ARE REDUCED 33 1/3 to 50%**

The advertisement goes on to read as follows:

New Prices effective Monday, June 13th. Geraniums were $3 to $4, red. to $2 per doz. Cannas were $2 to $3, reduced to $1.50 doz. Other plants as equally generous reductions. These are first quality, thrifty plants, far superior to stock usually sold at low prices.

We shall make a similar reduction on all our cut Flowers.

Best Carnations were $1.50, red. to $1.00 dz. Choice Roses were $3 to $4, red. to $1.50 and $2.00 per doz.

It is a very business-like looking advertisement and yet decorative enough to be distinctive, as a florist's advertisement should be.

Another very good looking advertisement comes from Chadwick, the Florist of Houlton, Me. It is a very simple advertisement, but displays a degree of taste in its composition which does much credit to both Mr. Chadwick and the printer. We feel that florists who are dissatisfied with the work of their local ad setters would do well to write Mr. Chadwick, asking for a sample of his copy as it appears in the Houlton Times. There are compositors on metropolitan papers who might well take lessons from this little Maine paper at least so far as the setting up of florist advertisements is concerned.

## TEXAS STATE FLORISTS' ASSOCIATION

An unusually good program has been prepared for the seventh annual convention of the Texas State Florists' Association to be held at San Antonio, July 12-14. Besides the annual address of the President, Otto Lang, of Dallas, Texas, and the report of the Secretary-Treasurer, Louis J. Tackett, of Fort Worth, papers will be read by Mrs. Samson Shaw, of Canyon, who will discuss the plan of an international holiday at which flowers might be featured; J. W. Furrow, of Guthrie, Okla., who will tell of his experience with a fungus disease affecting carnations; T. J. Noll, of Kansas City, Mo., who will discuss next season's outlook; James W. Begbie, of Shreevesport, La., who will try to answer the question, "Shall we Make November 11 a Flower Day?"; W. H. Englehart, of Memphis, Tenn., who will report on the progress of the florist business east of the Mississippi; R. C. Kerr, of Houston, whose paper on salesmanship in the flower shop will doubtless be heard with special interest; F. J. Ammann, of Edwardsville, Ill., who will talk about the Flower Growers' Association; W. J. Baker, of Fort Worth, who will urge that every Texas florist will become a member of the S. A. F.; Hon. Ray Lambert, who will discuss park and landscape work; V. J. Davis, of Fort Worth, who will deal with the future of the floral business of Texas; A. F. Koehle, of Mangum, Okla., whose subject will be "What Oklahoma Can do to Help Supply the Texas Florists,"; Miss Martha C. Wood, of Hillsboro, Texas, who will tell how a woman can successfully conduct a flower store; Mrs. E. O. Weisinger, of Beaumont, who will lead a round table discussion on the doubling of prices for Christmas, Easter and Mothers' Day.

During the convention the visitors will be taken for auto rides to many interesting points around San Antonio, and a Mexican dinner will be served in the so-called Mexican village.

## Burpee's New Sweet Pea

# Mrs. Warren G. Harding

## "The Harding Blue"

THIS distinct early or winter flowering novelty is a great and decided advance, it is really a pronounced acquisition to its color class.

MRS. WARREN G. HARDING is a deep shade of silver blue—the color that is already so well known as "The Harding Blue." The color is pure throughout with no suspicion of mauve or rose. The flowers are immense in size with a broad and much frilled standard. The wings also are well waved, and a large proportion of the flowers are duplex or double, which lends weight, size and beauty to the bunch. It is a vigorous grower. The flowers are produced freely and usually in fours.

We originally exhibited this novelty under the name of Silver Blue. By special permission from "the first lady of the land," however, we have now named this most outstanding novelty MRS. WARREN G. HARDING.

MRS. WARREN G. HARDING is one of the most admired early flowering Sweet Peas we have ever originated. It was awarded Certificate of Merit at the International Flower Show in New York, March 14, 1921. We now offer MRS. WARREN G. HARDING for the first time. We present it to the trade with the confident feeling that it will have great commercial value to florists in all parts of the nation.

Our stock of MRS. WARREN G. HARDING is very limited so we would suggest that you order as early as possible. **Ounce $12.00; ¼ lb. $45.00; postpaid.**

In addition to MRS. WARREN G. HARDING we have other outstanding Burpee Novelties in the early or winter flowering type. Write for our **Special Sweet Pea Folder for Florists** which gives full descriptions and prices of all these wonderful novelties, and a complete descriptive list of other worth-while early flowering Sweet Peas. It will be sent free.

### MAKING GARDEN PATHS

A good path may be made with sawdust and cement. Take a quantity of clean sawdust, divide it into two parts. Boil some tar, and with this make one heap of sawdust into a paste. Let it stand about one hour, and then add it to the second heap of sawdust, thoroughly mixing the two together. At the same time add clean coarse sand in the proportion of two bucketfuls of sand to one sack of sawdust.

Sprinkle the base of the path well with tar and lay the cement two or three and a half inches thick. Sprinkle the surface with dry sand, and roll well, taking care to keep the roller wet to prevent the cement sticking to it. This may be done by hanging a wet bag over the roller.

#### A Tar Path

For small gardens where durability and neatness, rather than artistic appearance, are required, tar paths are to be recommended. The materials required are those for a gravel path with the addition of coal tar as a binding material for the upper layers.

For a really good, firm tar-path, all the broken stone forming the top layer should be mixed with coal tar and cast into the trench much the same way as concrete is prepared. A layer of clean gravel mixed with tar should be spread on the top, then a thin layer of sand, broken shells, or small stone chippings, to form the surface. This must be rolled with a heavy roller to consolidate the whole. If tar exudes while the rolling proceeds, spread on more sand to absorb the surplus.

The sand used in tar paving must be free from dust and mud, and the gravel be angular, if a firm path be desired. If the gravel consists of round pebbles, and the sand contains dust or mud, the path will be soft in hot weather, because such material becomes charged with an excess of tar. The work must be done in fine weather.

#### Grass Paths

A grass path is a charming feature, especially when flanked on each side by a herbaceous border. Grass paths have a more natural appearance than gravel, and help to intensify the beauty and dignity of the surrounding vegetation. Wherever possible a grass path should be given preference, unless, of course, it will be used much, in which case, gravel would answer best.

A grass path, to be effective, should be not less than three feet in width, six feet or eight feet is a still greater improvement. Grass paths are suitable for separating plots devoted to fruit, roses or vegetables, and very pleasing, indeed, is their effect. When wheeling has to be done, planks should be laid down to wheel upon. Besides the charming effect, grass paths have the merit of cheapness, and, besides there is no necessity for edgings.

#### Turf Edgings

There is nothing to equal turf as an edging to a path. If the edges are kept properly cut the turf will have a neat and pleasing appearance. Even if a flower border or bed adjoin a path, it is a wise plan to have a strip of turf one foot wide as an edging.

#### Management

Having properly constructed the paths, their future management has to be considered. For gravel or ballast paths, frequent rolling is necessary to ensure a firm, even surface. The best time to roll is right after a shower or during showery weather when the surface is moist. The material will set better then.

Paths should be rolled once a month, but if possible once a week is better. If it is necessary to roll in dry weather, give the gravel a good watering beforehand. Loose gravel or shale should always be raked over before rolling to ensure an even surface. Weeds must be kept down with weed killer, hand weeding or careful use of the hoe.

#### Renovating Paths

Gravel walks which have been made for many years, and subjected to much wear and tear, will naturally have become uneven on the surface. Besides, the frequent sweepings to remove cut grass from the edgings, and fallen leaves, etc., will gradually have worn away the surface gravel or grit, and leaves the side somewhat loose and thin and blackened with soil. It therefore becomes necessary every two or three years, if not annually, to add a dressing of fine binding gravel to the surface. When doing this, first loosen the surface with a rake, and make as even as possible. On this, place a thin layer of fine loamy gravel, containing a proportion of at least one-fifth loam to one of gravel. Lightly rake over and then roll well. This will make the surface fresh and smart in appearance, and produce an effect equal to a new path.—*Canadian Florist.*

# RAMBLING OBSERVATIONS OF A ROVING GARDENER

For some reason suspicion has long been cast on the hardiness of the climbing rose, Silver Moon. Yet wherever I go I find this rose growing freely and apparently going through the winter as safely as most of the other newer varieties. No doubt the fact that it contains a little Cherokee blood is the reason for its supposed tenderness. I don't think, though, that the average gardener need hesitate to plant this favorite white variety. Mr. A. J. Fish, of New Bedford, Mass., a famous specialist in climbing roses, has a great number of Silver Moons in his back yard, and they grow almost as rampantly as blackberry bushes.

Mr. Fish and some other rosarians speak slightingly of Purity, another climber, the blooms of which closely resemble Silver Moon. Nevertheless, I cling stoutly to my fondness for this rose, which was first put out, I believe, by Hoopes Bros. & Thomas. It flowers later than Silver Moon, to be sure, but in my own garden it blooms just as profusely and makes a splendid showing. I will admit, though, that the canes are exceedingly thorny. When one comes to prune and train the plant he may wish that he had chosen Silver Moon instead. As a matter of fact, though, one can well be used to supplement the other, thus greatly extending the season.

I think there is no doubt of the fact that climbing roses have become among the most popular of all classes. It has taken a long time for the public to become enthusiastic over the newer varieties, but now we find good exhibits at the shows and see visitors spending much time around the tables where climbers are displayed.

---

I was disappointed that so few climbers were on exhibit at the recent rose show in Boston. I had expected Mr. Fish to be present, but perhaps the lateness of the season and the fact that he had just made a big display at Providence interfered. Mr. John B. Wills, an amateur grower of Winchester, was the only exhibitor who had any large display. This rose show, by the way, was rather disappointing in many ways, probably owing to the character of the season.

One display which stood out with especial prominence, however, came from the Frick estate at Pride's Crossing, and was made by E. E. Randall, the superintendent. It included an entire table given over to Mrs. John Laing roses. As a matter of fact, if Mr. Randall had not come in with this exhibit the show would have been very weak indeed.

One of the most interesting features of this show was made, not by roses, but by peonies, illustrating the fact that some very excellent peonies bloom very late in the season. I think that the table of peonies shown by T. C. Thurlow's Sons Co., of West Newbury, aroused as much interest as any table of the show.

---

Getting back again to climbing roses, I wonder why more attention is not paid to the possibility of having a long season by choosing the proper varieties. This point seems to be seldom emphasized either in the catalogues or by private growers. Yet there is a very wide difference in the blooming season of different popular varieties. The very first climber that came in my own garden is one origi-

nated by the late Jackson Dawson. It is extremely early and very free blooming, but lasts only a short time and is not showy enough to make it a favorite. Next came Aunt Harriet, a new rose originally put out, I believe, by the Farm Journal and one which ought to have a wide distribution. The color is a delightful vivid red, and while the first blooms come early, flowers continue to open almost to the end of the season. It is a handsome rose to cut, and pleases everybody who likes a red flower. It hasn't made very rapid growth in my garden as yet, but perhaps may retrieve itself in this direction when well established.

Wichmoss, another climber not often seen, is a favorite with me. It isn't showy, to be sure, but its delicate mossed buds are charming. Without doubt the rose which commands the most admiration in my collection is American Pillar, but for a late rose to grow on a post or a dead tree or in any such situation, I know of none to equal Excelsa, with its many short laterals and wonderful profusion of bloom. Elizabeth Ziegler comes late, but its shell pink, very double, crinkled flowers are among the finest climbing roses that I know, at least of the type growing in clusters. These roses are so distinct from the large flowering class, including American Beauty, Christine Wright and Silver Moon, that they are hardly to be compared with them.

Roses of the latter class with flowers resembling bush roses in size and substance, often have the merit of fragrance, which especially commends them to the amateur. One point distinctly in favor of the climbing American Beauty is its extreme hardiness. I think it is one of the few climbers to be recommended with confidence for growing in the colder sections.

In his New Bedford garden Mr. Fish grows Carmine Pillar splendidly and few single climbers are more dazzlingly beautiful. At the show in his home city Mr. Fish showed a specimen of the new climbing rose, Capt Geo. Thomas, a red, semi-double flower, which seems to possess no little merit.

I am interested to note that Mrs. Edward Harding, of Burnley Farms, Plainfield, N. J., has presented a sum of money to the Royal Horticultural Society, of England, to provide a cup for the years 1924-25-26, to be awarded for the best display of peonies shown by an amateur grower of these flowers. Mrs. Harding, as is well known, is a very prominent authority on peonies, and I understand that she hopes by this means to strengthen the popularity of the peony across the water to a greater extent than at present. They have never come into very high favor in England, but there seems to be no reason why they should not have a place there.

The last issue of the Peony News Bulletin is a symposium number, and for that reason highly interesting to all growers. It contains a report of the ballot recently made on the different varieties, and shows that a great many sorts now listed might well be dispensed with. It is the directors' recommendation that 111 varieties be discontinued and the names are given. Prof. Saunders says if we can accomplish the elimination of these varieties from commerce, we shall have made a first step towards that much desired end, the banishing of old, inferior stuff from our gardens.

The complaint has been made that the society has not taken active steps to do away with worthless peonies. This criticism can no longer be justified, for the directors have already started work in this direction. As Prof. Saunders says, it will be possible to greatly reduce the present list of varieties if the peony growing public will second the efforts of the society.

There is another side of the question, though, which is that new varieties are being put out almost as fast as old ones can be retired. More than thirty new varieties were offered by American growers alone in the year 1920, and probably many of them are by no means real improvements over those now known. It would certainly seem as though some definite action would have to be devised to reduce the number of seedlings being offered each year. Many of the larger growers realize this fact and are very cautious in putting out new sorts. Less experienced growers, unfortunately, are like those people who are said to rush in

where angels fear to tread. It would seem possible to have one or more test gardens where all seedlings could be given a careful trial before they are allowed registration.

In the report of the last peony show in Boston, the writer failed to give credit to Mrs. Milton F. Roberts, of 253 High Street, West Medford, Mass., for two first prizes awarded her by the American Peony Society. There is a particular reason why Mrs. Roberts should not have been overlooked. One first given her was for Kelway's Queen, and if I am not mistaken this was the first specimen of the true Kelway's Queen ever shown in Horticultural Hall. Mrs. Roberts' display was visited by many of the most prominent peony growers in the country, who expressed themselves as very enthusiastic over this flower. There is another peony masquerading under the same name, but without question Mrs. Roberts has the true variety, and Pres. Fewkes himself set the seal of his approval upon it. The other first given Mrs. Roberts was for La France. In addition to these peonies she had a display of Solange that attracted much attention.

One face which was greatly missed at the recent peony show in Boston was that of Mr. E. J. Shaylor of Auburndale. Mr. Shaylor is one of the old time peony growers who has given the world many new varieties and is

MR. E. J. SHAYLOR

known far and wide for his success as a hybridizer. Unfortunately, he has not been able to take a prominent part in peony matters of late, and his gardens do not contain so many plants as before he sold his stock to the Cherry Hill Nurseries, of West Newbury. Yet he has many fine peonies, and enthusiasts love to visit him in his delightful home among the trees each season. Moreover, the name of Shaylor is attached to several of the best peonies in cultivation, and T. C. Thurlow's Sons, Inc., think so much of Mary Woodbury Shaylor that it has a prominent place in the firm's catalogue.

ANNOUNCEMENT

Change of Business

To all my old customers and friends I beg to announce that commencing July 1st my business heretofore known as L. J. REUTER CO. will be consolidated with the plant brokerage business of C. U. LIGGIT, Philadelphia.

My office and 'phone connection at Watertown, Mass., will remain open as in the past. I will give my personal attention to all New England business in particular, as well as any other orders sent me direct from any other section. All orders will be filled in all cases with stock from as nearby a shipping point as is possible. I shall devote my entire time to the service of New England in particular, both as to filling orders, as well as the selling of any good stock which any grower may have in surplus.

All bills contracted by L. J. Reuter Co. prior to July 1st will be paid by me and I will collect all accounts owing me. I will, therefore, appreciate the assistance of all my customers in settling up these accounts.

Write me direct to the address below, and 'phone any time it can be made convenient. I am always at your service. It will be my effort to give better service than I have been able to give at any time in the past, and I am sure that under the new arrangement better service will result.

## George Watson's Corner

"You in your small corner and me in mine."

The last account of the annual meeting of the Rose Society was very interesting, and it shows how that wonderful organization is working along Great brains behind it. And great executive ability. Watch them. They have a great trip planned for the Atlantic-Pacific 1922, and are deep in the details of wonderful things from Maine to California. But that does not stop them from having an eagle eye, meantime, on the rest of the world. Watch them in Paris, France, for instance, July, 1921. Are they asleep? No. The United States is represented at the big show, as well as the British Empire, Holland, Belgium, and the rest of them. Some bunch, those rosarians! Their scope is world-wide, and their enthusiasts and workers are everywhere. More power to them. We all glory in them. J. Horace McFarland, kindly note this honest confession of a humble admirer.

A New Yorker is a person so ignorant of gardening matters that when you speak of weeds he thinks you are referring to a make of skid chains.—New York Globe.

To which might be added: A Chicagoan is a person so ignorant of gardening matters that when you speak of weeds he thinks you are referring to the straws you use imbibing the home-made hooch.

A Philadelphian is a person so ignorant of gardening matters that when you speak of weeds he thinks you are referring to Eisenlohr Cincos or Porfreondo Panatellas.

A Bostonian is a person so well posted on gardening matters that when you speak of weeds he says: "Why, sure, go on out to the Arnold Arboretum. They've got 'em there from all over the world. And what's a miserable Ampelopsis today, may be a Jim Jam Gem Boston Ivy tomorrow, and adorn drab brick walls the country over with its clinging, lovely, refreshing green foliage."

'Rah for Boston!

Do you ever go to see Emil Geschick? If you do it is not only his greenhouses, on the top of Chestnut Hill, clean as a whistle, no weeds; but if you are nice to him, he may invite

you into his palatial residence next block, and show you his oil paintings and the other wonders. He is an artist and a connoisseur in paintings, and as for a fisherman—well, ask any of the boys up in the Pocono Mountains. They all know Emil.

John Kuhn wiped the putty off his hands and took us around the area where the hail storm hit the glass. June 27th, and ruined things above and below to the extent of two or three thousand dollars. It was certainly some storm. Hail bigger than a hen's egg, and wind to beat the band. John says nothing like it has struck Philadelphia since the hurricane of thirty years ago, which ruined the Habermell place, where he was then an employee. Dozens of men are busy on the repair work and part of the place was to be rebuilt anyway. The contract is under way by the King Construction Co. Insurance O. K. Worry, work, delay, the worst.

John T. Slayker of the A. Leuthy Co., Boston, paid us a pleasant visit on the 29th ulto. He was on a business tour among the big producers of florists' plants in this vicinity and found many things up to the top-notch quality called for in his New England trade. He was surprised and gratified to find them all so prosperous and giving the trade the latest and best in their line and at reasonable prices, in spite of the still high costs for coal, labor and other essentials. Mr. Slayter was accompanied by his "vade mecum," Antoine Leuthy, who seems quite cheerful and hearty for an old veteran, and who seems to think he is on the retired list. I think I hear him grunt when he reads this, and say, "what does that old son of a gun mean by that 'vade mecum' stuff?" In reply, I will say, ask the old gray horse, if he is still alive. He was a pretty good "vade mecum" on a dark night between Boston and Roslindale for many a year. A good old "Go with Me."

Early closing is now the order of the day in the Philadelphia Wholesale Cut Flower Markets. For the summer months the Pennock company announces that from June 20th they will close daily at 4 P. M. and on Saturdays at 1 P. M., commencing July 2d. The other wholesalers follow suit, to a large extent, and the boys enjoy their spare time in baseball in the Park, and in other healthful ways in the open air. Which is as it should be and highly commendable. No one wants to miss a dollar, if it is in sight, but the custom of shorter working hours, once established, will work out all right in the long run. Of course, the Wanamaker idea of closing every Saturday and Sunday would not work in the flower business, as the crops have to be handled according to the sun and not the factory bell. Dry goods will keep. Flowers have to be handled as they come along. But just the same, the florists are adapting themselves to the modern trend and pulling into line as far as possible.

---

**Nurserymen's Problems** The American Association of Nurserymen, at its recent convention in Chicago, elected as president, M. R. Cashman, very widely known, especially in the west, and a man who should prove a strong and intelligent leader. Mr. Cashman is connected with the Clinton Falls Seed Co., Owatonna, Minn. He was born forty-four years ago, in the town where he is now doing business, and has been a leader in many enterprises. The vice-president is Paul C. Lindley, of Pomona, N. C., and the treasurer J. W. Hill, of Des Moines, Ia.

One important change in the list of officers is the retirement of John Watson, of Princeton, N. J., who has given much time and thought to the work of the association, and for the last two years has carried a heavy burden. Mr. Watson is succeeded by Mr. Charles Sizeman, of Louisiana, Mo., a man well suited for carrying on the work which has fallen to him.

As was expected, the convention arrived at several very important decisions, decisions which will do much to clear the atmosphere within the organization, and should promote better fellowship. Perhaps the most important action was the vote to discard the trade mark, "Trustworthy Trees and Plants." While this trade mark was upheld by some prominent members, there were many others who considered that it reflected on old established houses, that had built up a high reputation by long years of honest dealing, and felt that under the shelter of this trade mark unscrupulous or at least careless members might acquire credit that did not belong to them.

It was decided to use from three to five thousand dollars annually for newspaper articles and general propaganda to increase the sale of nursery stock, but this is not to be featured as coming from the association.

Many other problems were thrashed out at the convention, particularly those which have come to do with the work of the Market Development Committee, and as a result there is a more general feeling of satisfaction throughout the membership than for some time past. Ways for cutting expenses were found, and it is believed that the association will be on a better financial basis than ever before.

---

**Sweet Pea Society** We are sure that there will be a general feeling that the American Sweet Pea Society did the right thing at its annual exhibition in New York June 25 and 26, when it re-elected the old board of officers, as well as the standing committee. These officers, who are as follows: President, William A. Sperling of New York, Vice-president, David Burpee of Philadelphia; Secretary, Edward C. Vick of Newark, N. J.; Treasurer, William Sim of Cliftondale, Mass., have proved very efficient, and merit the honor given them.

A feature of the exhibit was the size of the flowers shown. Many of them were of mammoth proportions. The only exhibit in the trade was W. Atlee Burpee and Co., of Philadelphia, which received the Society's gold medal and silver cup for the most attractively staged exhibit. Probably the lack of exhibitors in this class was due largely to the late season and the drought.

It is unfortunate that the show was not more largely attended, and perhaps some way can be devised before another season comes around to arouse greater interest in exhibits of this kind. It's a question, after all, whether New York is the best place for shows of this character. Undoubtedly it is an ideal location for a trade exhibit, or for a show of mammoth proportions, but it seems difficult to secure the attendance of amateurs along any line.

---

A FEW DON'TS

(*Adapted from the Poor Printer*)

Don't think badly of your competitors.

* * * *

Don't imagine that cheapness pays—it doesn't.

* * * *

Don't try to bluff an honest buyer, he prefers candour to camouflage.

* * * *

Don't curse the trade you are in—take a hand in making it better, it's up to you.

* * * *

Don't take things for granted. Wine may be the better for age, but the simile doesn't necessarily apply to your business.

* * * *

Don't be jealous of the other fellow's success. If the comparison is against yourself, don't blame him, it's your fault, not his.

* * * *

Don't cold-shoulder the "Small man," it isn't friendly. Besides neglect or contempt may make him an expensive neighbor.

* * * *

Don't sell at a loss today for a possible profit tomorrow, it isn't playing the game with your competitors.

# "Montgomery's Priscilla"

That's the name of the new pink rose! The name will be "Priscilla" probably after the public has had it a while, but we have had to add the prefix to cover the rules of nomenclature.

In order to get someone who knows more about roses than we do to give an unbiased, honest opinion on the merits of this rose, we have placed 12 plants of it with each of the following rose growers:

E. G. HILL CO., Richmond, Ind.
DAILLEDOUZE BROS., Brooklyn, N. Y.
ALBERT H. AMLING CO., Maywood, Ill.
DUCKHAM-PIERSON CO., Madison, N. J.
ROWAYTON GREENHOUSES, Rowayton, Conn.
MILLER FLORAL CO., Farmington, Utah
WELLWORTH FARM GREENHOUSES, Downers Grove, Ill.
A. S. BURNS, JR., Spring Valley, N. Y.
ROBT. SIMPSON, Clifton, N. J.
CHAS. H. TOTTY CO., Madison, N. J.
NOE-RUZICKA CO., Madison, N. J.
WM. H. ELLIOTT CO., Madbury, N. H.
ANTHONY RUZICKA, Madison, N. J.
W. J. PILCHER, Kirkwood, Mo.
JOS. HEACOCK CO., Roeloffs, Pa.
WENDLAND & KEIMEL, Elmhurst, Ill.
JOY FLORAL CO., Nashville, Tenn.
ROBERTS ROSE CO., Denver, Colo.
GEO. C. WEILAND, Evanston, Ill.
LAKEVIEW ROSE GARDENS, Jamestown, N. Y.
BASSETT & WASHBURN, Hinsdale, Ill.
HARRY O. MAY, Summit, N. J.
F. R. PIERSON, Tarrytown, N. Y.
L. B. CODDINGTON, Murray Hill, N. J.
JOS. H. HILL CO., Richmond, Ind.
STEPHEN MORTENSEN, Southampton, Pa.

Ask them about it, if you will, at any time. They have our permission to tell the truth. We are going to let this rose sell itself. We shall be simply order takers.

A. N. PIERSON, Inc. Cromwell, Conn.

## ROSE SHOW IN PARIS

A great Rose Show is held in Paris this month under the auspices of the French Administration of Horticulture, Architecture, and the Fine Arts. These rose shows are a national institution, but had to be abandoned during the late unpleasantness. The July show will, therefore, be the first for several years, and will be of unusual interest. We are indebted to Samuel S. Pennock, of Philadelphia, at present on official Friends Service in Europe, for an advance program of the event. Mr. Pennock writes from Essen under date of June 8th and says that he is looking forward with a great deal of interest to his visit to Paris for this event in which he will take an official part, having been appointed one of the judges. In addition to the French officials on the Board of Judges, we notice some names that will be familiar to most rosarians on this side of the Atlantic such as — A. Chatenay of the French National Society of Horticulture; C. Cochet, Henry Graveneaux, both eminent rosarians, and Mm. Levecque, Noublot, Nonin, and Pernet Ducher. Outside countries are also well represented and among the well known names we notice that of Alexander Dickson of Newtonards and Messrs. Paul, Pemberton and Turner of England. Holland is represented by Jonkheer J. L. Mock and M. Leenders. The United States representative, Samuel S. Pennock, will be accompanied by J. Edward Moon, the head of the American Friends Service Committee. The exhibition will take place in the Bagatelle Gardens, Paris. Mr. Pennock promises to send some notes of interest in regard to the show after he has seen it. We will all be much interested to hear what this keen and experienced observer has to say.

To The Trade

Thos. F. Galvin, himself, will give your orders his personal attention at his son's store.

## BOSTON.

Plans are being made for a big gathering at Cunningham Park, East Milton, Thursday July 21, when the Gardeners' and Florists' Club, of Boston, will have its annual picnic. In past years these picnics have come to be events looked forward to with great pleasure, and if weather conditions are favorable the picnic this year should be the largest ever held by the club.

New members recently admitted to the Gardeners' and Florists' Club, of Boston, include: Daniel Campbell, 7 Garrison avenue, Somerville; Richard Powers, Milton street, Readville; Daniel Flynn, West Newton; W. F. Corry, Cambridge; Robert Peters, Cambridge; Allan Sutherland, 272 Beacon street, Somerville, and John Hales, 7 Woodridge avenue, Cambridge.

The Florists' Association, of Boston, is to have its annual outing next Tuesday evening, July 12. It will be held at Paragon Park, Nantasket Beach, and a dinner will be served at 7:30 o'clock sharp. Afterwards there will be an entertainment and dancing. Many of the members expect to make the trip by automobile, while others will go by boat.

## AMERICAN SEED TRADE ASSOCIATION

At the thirty-ninth annual convention of the American Seed Trade Association in St. Louis, the following officers were elected:

L. L. Olds, Madison, Wis., president; Alexander Forbes, Newark, N. J., first vice-president; Louis B. Reuter, New Orleans, La., second vice-president, and C. E. Kendel, Cleveland, Ohio, secretary-treasurer.

Much attention was given to the work of the Garden Bureau Publicity Service, which has done much to increase garden making throughout the country and thus build up a demand for seeds.

**Garden Seed**

## DU PONT ESTATE INSPECTED

### Greenhouses and Outdoor Gardens on a Scale to Surpass Any Others In America

The last meeting of the Lancaster County, Pa., Florists' Association was a notable one, as it included a visit to the famous DuPont estate, now being developed.

After a little preliminary work by Messrs. Weaver and Swayne, we had with us as guide and host Mr. Mullis, who has charge of this establishment, and in a few short years has turned a wilderness into a thing of beauty that in the course of time will excel anything else of the kind in this United States.

The gardens are a continual surprise, containing every known perennial and a host of annuals. Roses of every known variety are interspersed wherever they would be most effective and while it was a bit late in the season for these we saw some beautiful arrangements and could imagine the rest.

The open air theatre is in the gardens and is arranged with evergreen trees for wings, terraces for the stage and a seating capacity for a host on a beautiful stretch of lawn.

A planting of box in a formal garden effect was one of the surprises in our walk.

The greenhouses were not open to the public but Mr. Mullis, realizing that we were not an ordinary public, guided us through what is destined to be the most wonderful private greenhouse in the world. Of course, it is beyond the wildest dreams of the commercial man, but is none the less interesting. These houses have been described so often lately that it is not necessary to do it here, except to say that the most complete oil heating equipment is to be seen here that has been devised up to date, an equipment not beyond a large commercial establishment. The arrangements for growing fruit of all kinds under glass is fast assuming completion and today there are to be seen a number of houses in full bearing, others ready to plant and house after house of tropical and rare plants, with just enough cut flower stock to keep the establishment well supplied.

Of course, the indoor theatre is one of the sight-seeing attractions and certainly everything is arranged for the personal enjoyment of the lucky guests of Mr. DuPont. Consider the combination of music from a $50,000 pipe organ and the perfume of orange blossoms and the surroundings of blooming plants, in a comfortably heated and well ventilated auditorium! What more could human man want?

The club and its guests certainly extend to Mr. Mullis a vote of thanks that comes direct from the heart for his courtesies of the day.

On the way home a run was made through Greystone Park, on the Sharpless estate, and its beauties enjoyed from our machines. Here, again, we were indebted to Elmer Weaver for permission to take this run on a closed day to the public. In fact, we owe him a vote of thanks for arranging the trip.

Some of Mrs. Albert M. Herr's members of the Horticultural Department of the Iris Club participated in the trip and imbibed some ideas that will no doubt be worked out in a smaller way at home.

stringent orders were issued in regard to the inspection of flowers as well as other vegetation. The police were instructed, it is reported, to stop funerals and weddings to ascertain if a permit had been issued to transport flowers. If the orders to the police are carried to their ultimate conclusion, even the wearer of a buttonhole bouquet seems likely to be held up unless he has a certificate that his nosegay is free from insect pests. It is stated that florists have filed vigorous remonstrances against such restrictions on their business.

## CHANGES AMONG GARDENERS.

Ernest E. Stubbs has become gardener on the R. W. Smith estate at Glen Cove, L. I.

John Marz has become greenhouse foreman on the estate of Pierre S. du Pont at Wilmington, Del. He formerly occupied a similar position on the W. R. Cove estate at Oyster Bay.

Niels P. Hansen has become gardener to Robert Swaine at Riverside, Conn.

Arvid Anderson has become a member of the firm of Rose-View Greenhouses at Beardstown, Ill. He formerly was superintendent of the Deers estate at Moline, Ill.

The Allen Street Greenhouses of Springfield, Mass., have been incorporated, with a capital of $10,000. The directors are Lewis T. Robinson, President; George Johannes and Edna N. Robinson.

## FLOWERING SHRUBS IN THE ARNOLD ARBORETUM

### Sambucus canadensis

As the flowers of the Laurel (Kalmia latifolia) begin to fade those of the Elder of the eastern states (Sambucus canadensis) begin to open. This, Cornus amomum, and Rosa virginiana (or lucida) are the last of the native shrubs to make a conspicuous display of flowers in the Arboretum. Plants of the Elder, which have sprung up naturally along Bussey Brook, are now in bloom, and flowering plants are conspicuous by the small ponds near the junction of the Meadow and Forest Hills Roads. Few native shrubs make a greater show than this Elder with its broad heads of white flowers and lustrous black fruits. In low half swampy ground close to the shore of Massachusetts the Elder and the wild Rose (R. virginiana) often grow and flower together, and it is hard to believe that a more beautiful arrangement of summer flowers can be made in New England. In the Shrub Collection there is a form with dull yellow fruit (var. chlorocarpa), one with the leaflets deeply divided into narrow segments (var. acutifolia), and one with the flower-clusters four or five times larger than those of the wild plant and such large heavy clusters of fruit that the branches barely support them (var. maxima).

### Spiraea Veitchii

This Chinese species, introduced by Wilson from western China, is the last of the white-flowered Spiraeas in the Arboretum collection to bloom and one of the handsomest plants of the genus. It is a shrub seven or eight feet high with numerous erect stems, remarkably slender for the stems of such a large plant, and gracefully arching branches which are covered from end to end with broad flower-clusters raised on erect stems. For this climate this Spiraea ranks with the very best plants introduced from China in recent years.

### Cornus amomum

Attention is called again to the Silky Cornel because it is one of the best of all shrubs to plant in this climate

near the banks of streams and ponds where a large mass of foliage to spread out over the surface of water is desired. Examples of this use of this shrub can now be seen at two of the small ponds near the end of the Meadow Road where this Cornel is now covered with flowers. These will be followed in autumn by bright blue fruit; in the winter the purple stems are attractive. The Silky Cornel is a good plant, too, to place in front of groups of trees and shrubs, but it must have room for the free growth of its wide-spreading branches, for when crowded by other plants the branches become erect, and all the character and beauty of the plant is lost. A space of not less than twenty feet in diameter is necessary for the development of a handsome plant of the Silky Cornel.

### Cornus arnoldiana

This plant, evidently a natural hybrid between two American species, Cornus obliqua and C. racemosa, which appeared several years ago in the Arboretum, is a large shrub with erect stems and characters intermediate between those of its parents; flowering a little later than C. racemosa, it has been covered with flowers this year. The fruit, which is usually less abundant than the flowers, is white or bluish white. Interesting to students or plants, as are all natural hybrids, Cornus arnoldiana is not superior as a garden plant to C. racemosa except perhaps in its greater size.

### Rosa mundi

This is more properly Rosa gallica var. versicolor, and is the semi-double Rose with petals irregularly striped with white and dark rose color which is occasionally found in old New England gardens where it is generally called the York and Lancaster Rose, as it is also usually called in England. It is a handsome and interesting plant which should find a place in collections of old-fashioned Roses, but it is not the real York and Lancaster Rose which is a variety of Rosa damascena (var. versicolor). The petals of this Rose are in the same flower entirely white, entirely red and sometimes half red or rose color and half white. Flow-

ers with petals of the two colors are well shown in the pictures of this Rose published early in the last century. The York and Lancaster Rose appears to have become extremely rare in gardens, even in English gardens, but it has flowered abundantly this year in the Arboretum. The confusion in regard to these two Roses is likely to be increased by the fact that although one of them is a variety of R. damascena and the other of R. gallica they both have the same varietal name versicolor.

The Apothecary Rose is one of the names which was formerly given to a form of Rosa gallica, variously known as var. officinalis and var. provincialis. It is a dwarf plant growing from twelve to eighteen inches tall and spreading freely by underground shoots, and as it is able to maintain itself in sod it is gradually spreading from gardens and becoming naturalized. The foliage is dark green and the large, partly double, red flowers are extremely fragrant. This Rose occurs in a few of the old gardens of Massachusetts and New Hampshire, but is little known to rosarians of the present century. How long it has been in this country no one knows, although tradition makes the Huguenots responsible for its introduction. Formerly this Rose and other forms of Rosa gallica were cultivated in Europe on a large scale commercially to supply the petals which are slightly tonic and astringent, but were employed in medicine chiefly on account of their color and as a vehicle for the exhibition of more active medicines.—*Arnold Arboretum Bulletin.*

# Who Is To Blame?

Last fall several owners of ranges had to suddenly change their growing plans, because of delays in finishing the overhauling of their heating.
WHO WAS TO BLAME?

A number of others—one a notably big range—came near losing their entire crop because of last-minute boiler trouble that the owners knew was likely to happen, almost any time, and still had put off doing anything about.
WHO WAS TO BLAME?

You remember early last spring how we commenced urging florists to start in overhauling their heating systems the very day firing stopped!
You remember how a lot didn't do it, thinking that pipe and other things would be lower.
BUT THEY WERE NOT.

So they had to pay the price for pipe, besides the extra cost of a last-minute rush job, —which is always mighty expensive.
Instead of saving money, they actually gave a lot of money away, for which they got no real benefit.

So this season, the same as last, we urge growers to have their heating overhauled at once.
Send for us to come and look it over, make recommendations and submit an estimate.
After which, don't put off giving us the go-ahead order, until the last minute and then expect us to do the impossible.

PIPE IS LOWER.

### CARTERS' NEW LOCATION

Carters' Tested Seeds, Inc., are now very pleasantly located at their new quarters, Nos. 19 and 20 South Market street, Boston. This is the store formerly occupied by the Charles M. Hovey Co., for many years in the seed business. The Carters have bought out the Hovey concern, and taken over the entire stocks as well as the store and fixtures. In their new location, which is in the heart of the market district, a largely increased business is looked for.

### EDWARD C. VICK'S NEW POSITION

Edward C. Vick, for many years agricultural editor of the New York Sun, and later of the New York Globe, is now associated with the Hanff-Metzger Company, advertising agents, 95 Madison avenue, New York.

Mr. Vick will devote his efforts to handling agricultural and horticultural advertising of all kinds and his long experience has fitted him to give valuable advice and assistance to advertisers in these respective trades.

The Fernery Florist Shap has opened a new store at 55 Palisades avenue, Englewood, N. J.

## Men I Like To Meet

Henry F. Michell is a genius when it comes to detail. Every one of the three hundred and sixty-five days he has something seasonable to interest his customers. For instance July 5th we met him in his palatial store in the front among the customers at the counters and he was willing to explain to us all the new and unusual contraptions for sprinkling lawns—they looked like brass spittoons, some of them, others like surgical instruments for harakiri, and others like miniature machine guns mounted on trestles; but all common sense enough, when explained, and astonishingly low in price.

Henry F. Michell

Harry tries to keep all of his one hundred and thirty eight faithful employees on the pay roll, even during the dull months, and his keen brain is kept busy thinking up things to keep them all on the job, instead of saying "good-bye." It is a great gift to have a mind so constituted; with friendly, helpful, human feeling for others back of it. That summer store of Michell's, which you'd naturally think would be a morgue to keep away from, is really a dream of wonder and invitation, and you can see more delightful things there than in any old curiosity shop. And all free. No fifty cents admission. GEO. WATSON.

John Gallivan, an old time florist, died recently at Meriden, Conn., at the age of 69. He opened a greenhouse in Meriden in 1891, and continued in the business until his death.

# -HORTICULTURE-

Entered as second-class matter December 8, 1904, at the Post Office at Boston, Mass., under the Act of Congress of March 3, 1897.

Vol. XXXIV JULY 25, 1921 No. 2

## THE TALK OF THE TRADE

The proprietor of Bixby's Conservatories, in Manchester, N. H., believes in getting the public to visit his greenhouses, especially at Easter, when the house is full of lilies. Last Easter Mr. Bixby sent out a thousand invitations which were printed on blotters and mailed under one cent postage. The list of names was obtained largely from the telephone directory, and for several days before Easter the houses were thronged with people. Some attention had been given to making the houses attractive with palms and other potted plants as well as with lilies, and people came in such great numbers that little or no attempt could be made to solicit business. Mr. Bixby and his employees simply kept pads in their hands and took down whatever orders might be voluntarily given. In this way, however, many sales were made and, what was of greater importance to Mr. Bixby's way of thinking, regular customers were obtained.

A list was kept of all the names to which invitations were sent, and when a new customer comes to the store now, this list is looked over to see if his name is there. By this method of checking up, Mr. Bixby has found that his little advertising plan has brought many new faces to the greenhouses. He plans to send out at least two thousand invitations next year, and Mr. Bixby says that these personal reminders are much more effective than the insertion of an advertisement in the local papers. The personal nature of the invitation seems to be appreciated and responded to.

The card sent out reads as follows:

SAY IT WITH FLOWERS

You and your friends are cordially invited to view our assortment of Easter flowers and plants, Sunday and Easter week.

Bixby's Conservatories
Manchester, N. H.

Member Florists' Telegraph Delivery

For several years Mr. Bixby has been using lily bulbs from Bermuda, and is highly pleased with the stock he obtains. The bulbs are those sent out by Theodore Outerbridge, of Sunnylands, Bermuda, whose recent visit to the United States was mentioned in Horticulture. Mr. Bixby says that the bulbs which he gets are very free flowering and without disease of any kind. The only possible fault is the fact that some of them get rather tall, but these tall flowers can be used without difficulty for funeral work and in other ways.

It pays florists with even a small amount of land to grow gladioli for the early trade. These flowers are selling with increasing readiness each season, and are decidedly profitable, especially when grown in a corner which would have little value for any other purpose. This at least is the opinion of Mr. J. W. Howard, of Somerville, Mass., one of the oldest members of the trade in that city, and a man who has specialized in weddings for fifty years. Mr. Howard has a strip of ground adjoining his greenhouses which is protected from frosts and yet exposed to the sun. Here he grows all varieties of "glads," and gets them very early. This year he put in the bulbs the 12th of April and cut his first flowers the 22d of June. Among the varieties which take well with his customers are Prince of Wales, Pink Beauty, Edith Cavell, Marechal Foch, Pink Pearl, White Giant and Europa.

While dahlias have not yet become popular in the trade as have gladioli, it is quite possible that this situation may be changed as newer and better varieties are put out. As a matter of fact, some of the dahlias best adapted for cutting have not as yet got into the trade at all, owing to their scarcity and the high prices charged for roots. Gradually, however, these varieties are being introduced and gaining in popularity. Moreover, growers are now trying to produce dahlias, either pink or white in color, with extra strong stems and heads that are kept erect, having in mind especially the requirements of the florists.

One dahlia which promises particularly well as a florists' flower is Darlene, a decorative seedling being put out by J. K. Alexander, of East Bridgewater, Mass., with whom it originated. Mr. W. A. Finger, the Long Island grower, who markets a good many cut flowers, says that Darlene is proving among the best which he has ever used

Wayside Flower Stand of Charles S. Beasley at East Milton, Mass.

for that purpose. Last year he cut Darlene freely for the florist trade and found it a very acceptable variety. For that reason I was pleased on a visit to East Bridgewater only a few days ago to see Darlene already in flower. Apparently it is one of the very earliest dahlias to bloom, which is, of course, a decided point in its favor. It has a very solid head, carried on a tall, stout stem. In color it is shell pink with a dainty blending of white at the center. It has heavy, deep green foliage, which makes a fine foil for the pink and white blooms. I am told that the plant keeps on blooming all through the season.

It is important that flowers of this type which prove themselves of unusual value for cutting should be classified and a record kept for the benefit of florists who can use blooms of this sort. It is to be hoped, however, for the sake of the growers, that better prices will be obtained for dahlia blooms, in the event that kinds which sell well are offered. Past prices, in many cities, have hardly made it worth while sending the blooms to market at all.

---

Herbert Alexander, J. K. Alexander's son and right hand man, has originated another very early dahlia which seems quite as well adapted for cutting as does Darlene, which it much resembles in habit and form, although considerably lighter in color. This new variety has been named Edna Story, and a stock is rapidly being accumulated.

---

There are thousands of amateur garden makers who know John Kirkegaard through his "Trees, Shrubs, Vines and Herbaceous Perennials." It's a very excellent book, in spite of some obvious mistakes, and it is unfortunate that, owing to failure of the publishers, the book has never proved very profitable to Mr. Kirkegaard. Nevertheless, the book makes an excellent introduction when visitors go to the New England Nurseries, at Bedford, where Mr. Kirkegaard is in charge.

There are few nurseries which I have visited where so much attention is being paid to fancy evergreens, and where a larger stock has been accumulated. Mr. Kirkegaard believes that there is going to be a big demand for this stock when planting conditions become normal again, and he is getting ready for it. He has a lot of Pinus mughus that certainly delights the eye. He is very strong also on Tsuga canadensis. Among the Junipers there are some 2,000 specimens of Juniperus litteralis and also a good lot of J. tamarisifolia.

Some day Taxus cuspidata, the Japanese yew, is going to become an exceedingly popular plant, I believe, not only for lawn planting but also for use in making hedges, and I am glad to see that Mr. Kirkegaard is among the nurserymen planning ahead for this time.

Although of different character, Cotoneasters horizontalis and Wilsoni are among the interesting plants to be found at this nursery, plants which in time to come are certain to achieve much popularity and be planted extensively.

---

The best flowers on the market at present, outside of the roses, are the gladioli. The remarkable improvements that have been accomplished in the past ten or fifteen years in size, form, color and other characteristics of the gladiolus family are almost beyond belief and they are now coming to the front as a cut flower more and more as the years roll by. A few years ago it used to be a flush of a few weeks and then good-bye. Now the counters are crowded with them for months and months and splendid they are, in all the colors of the rainbow and almost unbelievable as to size of flower, delicate shadings and beautiful formations. We used to look on the sweet pea as a small sideline issue in the cut flower market twenty-five years ago. Look what it is now. A big feature for almost the year round. The pessimists can say what they please but we seem to be really progressing in the floral world and passing out better and better as the years roll by, all along the line.

---

Market gardeners are to have no monopoly on roadside selling. Florists are finding that they can dispose of stock in this way at a very satisfactory profit. Mr. Charles S. Beasley, of East Milton, Mass., the famous pansy grower, has been experimenting with the plan for some weeks, and finds it very satisfactory. It so happens that Mr. Beasley's greenhouse plant is at the side of a much traveled highway leading to Nantasket Beach and Cape Cod. He has a considerable amount of land which he devotes to gladioli. This land borders the street and when the plants are in full bloom makes a very attractive show.

At the entrance to the grounds, a substantial booth has been erected, and here gladioli and whatever other flowers Mr. Beasley may have on hand are displayed. They cannot help catching the eyes of automobile parties which pass in a continuous stream, and as a result many sales are made. A young lady serves the customers who stop at the booth, and on some days the men are kept busy cutting spikes to keep the containers filled. The gladioli are sold by the dozen, but other flowers are made up into bouquets.

Mr. Beasley is well satisfied with what he has been able to accomplish in this way, and finds it much more profitable to retail the flowers than to send them into the market.

---

## STERILIZING SOIL WITH STEAM

Considerable interest has been shown in the use of steam for sterilizing soil, not only in greenhouses, but in the open ground as well. The plan has even been considered by a forester in Pennsylvania who has a five-acre seedling nursery, but the expense seems too great to make the plan practical in a large way. The D. Hill Nursery Co., of Dundee, Ill., has had considerable experience with the sterilizing of soil, and writes as follows in regard to the methods used:

"The sterilizing of soil with steam, to kill weed seeds, we have not found to be practical on a large scale. The cost makes it prohibitive. For a small area it can be worked out very satisfactorily.

"An ordinary steam tractor, such as used in grain thrashing outfits, is very satisfactory. A 2-inch pipe, connected with the steam chest, and run from the top of the engine over and down to the ground, connected up with a corresponding 2-inch pipe, 15x15', will answer very well. The pipe on the ground should be laid in a trench about six inches deep and covered over with soil. A hole should be drilled in the pipe, every foot, about 1/16 inch in diameter.

"After burying the pipe in soil, a heavy canvas should be placed over the entire area and weighted down thoroughly over the sides with dirt; then the steam turned on and left to saturate this area for from two to two and a half hours. This will kill all of the weed seeds in the area that has been submitted to the live steam, but on account of the length of time required, it makes the work very slow.

"The most economical and simplest way to control weeds is to leave the ground where the planting is to be done open for one year and to keep it thoroughly disked and cultivated."

---

"What does young Bjinks mean by sending me one carnation a day right along?"

'Why, don't you know? He's saying it with flowers, and he stutters."

# "SALESMANSHIP AND SALES POLICY IN THE FLOWER SHOP"

By ROBERT C. KERR

In dealing with this subject it is my intention only to touch upon the common errors and mistakes, both in salesmanship and policy of the majority of our stores throughout the country.

I believe I am safe in making the statement that the ordinary flower shop has a very poor sales policy. There are, of course, a few who are more modern and up to date in their methods. These concerns have built a big business on their progressive methods. The small concern that adopts the antiquated method and never attempts to improve in any way will always be small.

We have heard some of our florists wondering how certain concerns have built such a big business as they have and very often they use the alibi that some friend with money was pulling wires to develop their business, not willing to give credit to the individuals themselves. There are a few cases, of course, where this is true, but it is the exception rather than the rule.

I believe the time is coming when it will be the case of the survival of the fittest. The old days when a man could put a refrigerator in his store, with other fixtures, and open his doors and say, "here I am," are a thing of the past. The concerns in the future that adopt modern-day methods and modern-day equipment are the ones that will survive. The old type of florists must go. Many times I walk into a flower shop and possibly get back to the workroom, before anyone attempts to find out who is in the front. Someone is trying to finish up a design or spray before they wait upon a customer. I think this is a serious mistake. We should meet the customer half way in the store. Lead him to believe that we stand ready to wait upon him instantly, and by all means greet him with a smile and a good morning or afternoon, as the case may be. Get interested in that particular customer's wants, whether they be large or small. One of the largest and most successful merchants made a statement before one of our organizations that he would give anything in the world if he could influence his employees to warm up to the customers, and that phrase has a wide meaning. I think our flower shops need a thorough drilling along this line. Indifference on the part of the salesman or saleslady is one of the greatest liabilities in connection with our business. The customer should be made to feel at home the minute he steps into our shop and be made to feel that we are anxious to serve him.

Another great evil that exists among our craft, in the retail business, is the pricing of our stock. I can remember, in the old days, when we made a spray for $1.00 and designs for $1.50. We thought it always good policy, if we had a policy, at that time, to quote our prices from the lowest prices up. For instance: a customer entered the store, desiring a wreath, and made inquiries as to the price. We would say, "our wreaths are from $1.50 up and sprays from $1.00 up." The results were that we found the majority of our orders ranged among the lowest prices. We have found it best to strike upon the medium price: "Our average size design ranges from $6.00, $8.00 and $12.00, and our average spray from $5.00, $7.50 and $10.00." When a customer walks into our store and makes an inquiry as to the price of a design, we state to him that our average sizes range in price from $7.00, $8.00 and $12.00, and more handsome designs run from $15.00, $20.00, and $25.00 up. However, if they desire something smaller we are prepared to make the design as cheap as $5.00. We recommend the average size, if they desire something along that line, and, of course, we recommend the larger designs if they want something more elaborate. This is only as an illustration.

Now there are a number of salesmen that are good judges of human nature and close students of salesmanship, who can size up their customers from the introductory conversation, and understand how to quote them prices. There are also certain customers that have been on our books for a number of years and we always know the size of their pocketbooks and, of course, have no trouble in arriving at the proper charge.

We sometimes misjudge a customer, even though we may be a good salesman. For illustration, a very wealthy man telephoned us an order for a design in some eastern city. He stated that he wanted a very handsome piece, but hesitated about giving us the amount, so we wired a $50.00 design. We thought it covered his needs, but when he received the bill he was very much embarrassed that we sent such a shoddy design for him. He then stated he felt that anything from $150 to $250 should have been the amount of the design. Of course, this was a very unusual case, and I want to assure you that he was not half as disappointed as we were, because we certainly would have liked very much to have ordered a $250 design for him.

A little further, as to personality and personal contact. The salesman with a pleasing disposition and with a smile in his or her voice is worth untold value to a store. All we need to do is to put ourselves in the customer's place, or recall our relations with other concerns. Who are the salesmen that you prefer to wait on you in the different stores? It is the salesman that is pleasing, obliging and anxious to serve, and I know that salesmen of this calibre are few and far between in the vast majority of our flower shops. As a usual thing, there is an air of indifference about us. As I stat-

Paper read at the Convention of the Texas State Florists' Association.

REMINGTON, INDIANA

ed before, the time has come when this must change.

Possibly more orders are taken over the 'phone than through any other medium and there are many more things that enter into salesmanship over the 'phone than if the customer was in the store. There should be promptness in answering the 'phone, a smile in the voice, a disposition to give the customer full information and do it willingly. An attitude that indicates that the salesman is in a hurry and makes short, snappy answers leaves the impression that we are doing the customer a favor by keeping open our front doors. This is one of the gravest mistakes in salesmanship.

Now, to sum up these few points in salesmanship; what we need today is an atmosphere in our stores that we are conducting our business along progressive lines. We should be ready and anxious to serve. We are extremely desirous of pleasing our customers and to make a friend out of every man and woman that does business with us.

This should be borne in mind, a customer who passes through our doors or gives us a call over the 'phone pays us a compliment.

Now, just a few words regarding the sales policy. One phase of this subject is covered by another subject of our program, that is, the matter of price, and this in itself is a big subject and I hope will be thrashed out from every angle at this convention.

We believe that our concern has a sales force that is progressive, but there are many faults to find and there are many things to be improved upon. One of the biggest assets we find is a complete stock at all times in our store.

Another important item, which possibly comes under the head of salesmanship, is that of our show windows. How many up to date dry goods and other merchandising concerns allow their front show windows to get unsightly, and yet how many florists make it their business to see that their windows are attractive. It is true, our stock is perishable and requires considerable attention, but that is all the more reason why we should give our windows special and careful attention. What is more attractive to the public than a well arranged front show window? The same applies to the interior of the store. In our line of business, it is necessary to be constantly changing stock in the front of the store. In the filling of the orders, the stock should be immediately replaced by something else that will add to the attractiveness of the store. The flowers in the ice box should be attractively arranged at all times, irrespective whether the business is rushing or quiet. I have noticed, more particularly during the big rushes, employees rush to the ice box, grab out some flowers, and not take time to rearrange them. The customer takes particular notice of this condition and we should bear this in mind. How many times has a customer walked out of your store without making a purchase and you could not understand the reason why? In many cases, this is the cause. Something either

Robert C. Kerr

in the show case or in the store did not appeal to him.

Now the next important thing,—and I find quite a difference of opinion on the subject—is, should the workroom and the salesroom be entirely open so that the customers can see the workroom? The old method was that our workroom should be in full view of our customers, which leaves the impression that business is good and that we are all busy. I believe this method is rapidly passing. I stepped into one of the most prominent flower concerns in Chicago, doing a big flower business, and there were two or three salesmen in front waiting on the trade. I saw no one making up. I wondered where they did their work, and, upon introducing myself, I told them I was a florist from the big plains of Texas, and wanted to get some pointers. The manager took the trouble of showing me through his establishment. After looking through the store, I was taken to the basement and there twelve or fifteen workmen were hard at work. I then went down the street and another equally large concern had their workroom in full view of the front, but they all appeared to be mighty busy and indications were that they were doing an enormous business.

Now if I had been a customer and not had the privilege of going down in the workroom of the first store, I believe that I would have been more impressed with the second store, but, being in the business, I was anxious to know who was doing more business. In the first store things were neat and trim, and customers waited on without confusion and I believe that they would come nearer satisfying their customers in the first store than the second, because the salesmen were trained along the particular lines of waiting on trade. The workmen in the first establishment, whose duty it was to make up designs, were specializing along that particular line. I believe that if the salesman and workman are drilled for their particular work there will be greater efficiency. In the second store there was more or less confusion. I noticed particularly that no certain ones waited upon the trade. It is true that business looked better in the second store, but this is the day of specializing and our force should be drilled along these lines. Therefore, as I stated in the beginning of this subject, the day of the combined store man and designer in the retail flower shop is rapidly passing.

Now as to the delivery service, which I expect to make short and snappy, so much has been said upon the subject that I feel that time does not justify an elaboration. The concern that adopts the slogan and actually puts it into practice of "Service on the minute," is, to my mind, the concern that is getting ahead. The old system of running into the rear of the hearse in making a funeral must cease in the future. The same applies in making other deliveries. We all should adopt the slogan of "Service on the minute," and put it into practice. If a few deliveries should happen to cost possibly a little more than the sale, and delivery should be made immediately, call a messenger. I think this is good business. Just for illustration, this case happened several years ago. We had an order for 50c worth of bedding plants for delivery in the suburbs several miles out. We delayed the delivery of this order, waiting until we had several orders in that direction. Consequently the order was cancelled. Several months later, it so happened that there was a wedding in that same family and we approached them to place the wedding work with us, and we were advised that if we could not fill a fifty cent order on time we could not fill a $500. Prompt deliveries and a polite and courteous driver are very essential to your business.

# ADVERTISING AND SELLING

Did you ever check up on your window display? Wouldn't it be a good plan? Perhaps the kind of displays which cause you the most labor and cost the most are the ones which bring you the least results. After all, it isn't the amount of people who collect around your window but the number who enter your door in which you are interested. What percentage of those who stop to look come in to buy? One retailer made a test by providing himself with three automatic counters. With one of them he registered the number of people who passed the windows without stopping to look in; on the second he made a count of the numbers who did stop to look. The total, of course, comprised the number of people who actually passed the store during the allotted period. The third counter was used to register the number of people who actually entered the store after looking into the windows, but not counting those who arrived in automobiles, and who obviously were not affected in any way by the window display. On the first test it was found that the window exhibit,—and it was a good one,—influenced not more than four per cent of all the passersby to enter the store. Would you be satisfied with any such percentage? Do you know that that is less than you have already? Is it worth while going to heavy expense for frequent window changes unless a large number of people can be reached?

You will have to answer these questions in your own way, but in the end you will find, probably, that the volume of people passing the store is almost the same in character day after day, and that certain kinds of displays which might be much more effective in other sections will be almost wasted. Here is an opportunity for the florist to make a study of his location and the kind of people who travel back and forth on his street. In some sections the most effective window displays are those which show up best by artificial light. They are sections where the streets are thronged in the evening. In other localities the results of an evening display are nil, as the streets are practically deserted after nightfall.

There is another point in this connection. If it happens that your windows attract large numbers of people in the evening, then it will be distinctly to your advantage to do your window trimming in the morning instead of at night, as is customary in many stores. It's poor business to close the shades or shutters in the face of prospective buyers. What if you do have to change your well formed habits? There is no reason why a store window shouldn't be dressed in the morning as well as at night. It's the same way with lighting. Many a florist going on the general principles of economy has used very little light in his windows in the evening. In some localities this is the right thing to do. In others it is wasting opportunities. If there are people in large numbers who are fond of window shopping after dark, by all means make your windows as attractive to them as you can, and give them every opportunity for seeing what they contain.

All in all, if you make a fair test of the effect of your window work, the chances are that you will be distinctly dissatisfied, and will not rest until you have evolved some means of staging more alluring windows and inducing a larger number of people to come inside.

## NOTES FROM CORNELL UNIVERSITY

Mr. S. C. Hubbard, who has been in charge of the rose test gardens the past five years, has resigned his position and will leave for Amherst, Mass., August 1, where he will take charge of the greenhouses at the Massachusetts Agricultural College. Mr. Hubbard received his training at the A. N. Pierson Co., Cromwell, Conn. He has been very successful in his work here and is considered one of the best authorities on the culture of outdoor roses in this country. The Massachusetts Agricultural College is to be congratulated on being able to obtain the services of Mr. Hubbard.

The summer school is now in progress at the University with a registration of over 2500. Of this number, 900 are registered in the College of Agriculture and 36 in the courses in garden flowers offered by the Department of Floriculture.

MICHELL'S SEED HOUSE
518-516 Market Street Phila., Pa.

Dr. A. C. Beal and Prof. Arno H. Nehrling will represent the Department of Floriculture at the coming meeting of the Society of American Florists.

Prof. Alfred C. Hottes, of Ohio State University, accompanied by two of his students, spent a day visiting the Department of Floriculture. Prof. Stanley Hall of the University of Illinois was another recent visitor.

Arthur Cowee, of Berlin, N. Y., who is a member of the legislative committee of the department of farms and markets, spent several days at the University inspecting the various departments.

## MASSACHUSETTS NURSERYMEN'S OUTING

The Massachusetts Nurserymen's Association is to have its annual outing on Tuesday, August 2. The members are to meet at Horticultural Hall, Boston, at 9 o'clock in the morning, and are going by automobile, first to the Eastern Nurseries, at Holliston, and then to the American Forestry Nurseries, Framingham, and afterwards to the Framingham Nurseries in the same town, where they are to be the guests of Mr. Richard Wyman.

## Burpee's New Sweet Pea

# MRS. KERR

A spray of Mrs. Kerr—reproduced from a Fordhook photograph.

### The Best Early-Flowering Salmon

MRS. KERR created a sensation when exhibited at The Great International Flower Shows in New York, March, 1920, and again in March, 1921. This magnificent novelty has been hailed by experts as being the greatest advance in this type, its introduction being eagerly awaited by Sweet Pea growers.

MRS. KERR has all the desirable qualities which go to make up a perfect flower. In addition to its unique and dainty color the plant is of most vigorous habit and extremely floriferous. The flowers of immense size and exquisite shape are a most pleasing shade of rich salmon overlaid or suffused with orange. Under glass the color is intensified and indescribably beautiful; in artificial light it is simply magnificent. The great flowers are of substantial texture thus adding to their unusual lasting qualities after being cut.

MRS. KERR produces flowers which are bold in the extreme; the standard is broad, deep and charmingly waved; the wings are well placed as are also the three or, more often, four flowers on their long, stiff stems.

It is impossible to fully describe the great beauty of this lovely flower, which we feel convinced will become one of the most popular of the Early-Flowering type All Florists must have it to be "up-to-date." Awarded Certificates of Merit at the International Flower Show, New York, March, 1920. Oz. $10.00; ¼ lb. $37.50, postpaid.

### THE EASY BOSS

The easy boss. He's the boy the fellows all like. The hard boss. He's the boy the fellows all hate.

Yet between the two the former, notwithstanding his easiness, generally comes out on top when results are figured.

All the same, the easy boss can overdo it, and come out a loser. There are always slackers in plenty waiting to take advantage of him. The thing for the easy boss to do is to first get a reputation for being an easy boss!

After he's got that reputation he can hold them all down to the grind stone. He ain't working them hard. He's the easy boss. You can't get away from that. So what you do for him you do cheerfully and to the best of your ability.

We've all come across him many a time, haven't we? The easy boss. And we love him. And work like the devil for him, and glad to do it. The hard boss, in the meantime, sweats himself into an early grave and never understands.

He never understands that the human being is a human being and not a machine. He attempts to drive it just as a machine is driven. And expects results. Well, he gets the results, of course, but not the same results that the easy boss gets without any driving at all.

So, as the caption of this dissertation has it, be the Easy Boss. When you've got there, you can be the Hardest Boss in the world and never be suspected. But it takes some brains.

GEO. WATSON

### SAYING IT WITH SALMON

William Penn, the florist, is "saying it with salmon," instead of "flowers," up at Ball's Camps, Grand Lake Stream, Maine. Late one afternoon last week he landed, in quick succession, five beauties.—Boston Record.

# RAMBLING OBSERVATIONS OF A ROVING GARDENER

It is with great interest that I read Harry A. Norton's paper on peony growing in the July number of the Garden Magazine. Mr. Norton, who was elected vice president at the recent annual meeting of the American Peony Society, is the kind of man adding lustre to any organization of this kind. He is a very busy manufacturer, with a factory in Boston, but plays just as hard as he works. He has a variety of playthings, too, but none absorbs his attention to a greater degree than the gardens at his summer home in Ayers Cliff, Quebec. In these gardens there are many roses and other plants, but the flowers which give him the keenest delight are the peonies, of which he has over 450 varieties. It has been Mr. Norton's delight to prove that it is possible to grow a wide variety of peonies in a section as far north as Quebec. In order to prove his point he staged a collection at the Boston Show which aroused no little interest and won him several well merited prizes. The accompanying picture from the Garden Magazine conveys some idea, not only of the Norton garden, but also of its beautiful location on the shore of the lake. It is interesting to have Mr. Norton's report on some of the leading varieties, as they grow in his garden.

Of Grandiflora (Richardson) he says: "Grandiflora, one of the oldest varieties, but very beautiful in coloring; rose-white, free flowering and one of the latest to bloom. Its merits seem to have been overlooked. It is a good keeper and should be more generally grown."

In discussing Jubilee, which has been much mentioned in various publications, he says: "Jubilee is probably the largest Peony in my collection and is a very good flower, possibly it has been overrated; and, although a prize winner at the shows, it lacks the charm of Therese, Le Cygne, or Solange." It is very interesting to have Mr. Norton's opinion of Jubilee, as there seems to be very wide difference of opinion about this variety.

Of other peonies he says:

"A strong, fine plant of La Rosiere, with its mass of large, flat, semi-double white blooms, is one of the most striking specimen plants in my collection.

"Frances Willard is a perfectly formed flower, large and fine. As a cut flower or protected from the sun, it retains its delicate pinkish cream tints and lasts well.

"Enchanteresse is not so well known as it should be. It is a large, globular, compact, creamy white flower; a tall vigorous grower and very late.

"In light pink varieties, I have yet to see a better variety than Therese. To my mind it is one of the finest varieties in cultivation, and a well grown plant of this, carrying from thirty to forty blooms, is a sight not easily forgotten.

"In reds, Adolphe Rousseau is one of the best of the early semi-double varieties. It is particularly effective against a background of shrubbery, and is a very tall, vigorous grower and a dependable free bloomer. A newer dark crimson, and one of exceptional merit and fragrance, is Phillipe Rivoire, which is fast growing in popularity as it becomes better known."

---

Some people seem to think that

Peony Garden of Harry A. Norton at Ayer's Cliff, Quebec

peonies require an unusual amount of coddling or that there is some secret process about putting them into the ground so as to get quick results. Of course, this is far from true. It is only necessary to remember a few important points in order to have perfect success in growing and blooming most varieties. In their latest catalogue the Cherry Hill Nurseries, of West Newbury, Mass., cover this point very succinctly and yet fully in a single paragraph, which reads as follows:

"Peonies do best in a light, rich loam, but in no case should manure be applied directly to the roots. It is not necessary to trench out a deep bed, but plant them in well-loosened soil to a depth of about two inches below the top of the ground. Deep planting is the most frequent cause of 'blind' plants—that is, plants which appear perfectly healthy but do not bloom. The buds on the plant should be about two inches below the top of the ground. We use a fertilizer containing considerable lime and potash in the fall, and some form of manure in the spring which acts as a tonic and, with liberal watering, will produce extra large flowers."

---

I have been much interested to see that Dreer is advertising the Allwoodi carnation to the trade. Few plants have aroused so much interest across the water as the different varieties of this cross between the garden pink and the carnation. It has not been widely distributed as yet in this country, and probably will not create so much of a furore here as it has in England, where it has been pushed very persistently and assiduously for two or three years.

Nevertheless, it is certain to become one of the stock perennials of the garden. Just how hardy it will prove in the north remains to be seen. But I think it is going to be reasonably satisfactory in that respect. I set out several plants in the spring of 1920, and lost only one or two last winter. Unfortunately the tag giving the names of the varieties which I have became mislaid, but there are quite distinct differences among them, both in form and color. I find that they start blooming very early in the season, and flower with remarkable freedom all through the summer months. In height they are about the same as the ordinary garden pink, and can be used either as a border plant or for bedding. It seems, too, that they ought to be particularly suitable for window boxes, and I believe that florists can use them for that purpose to excellent advantage. I am certain, also, that the cut flowers will sell well in sections where a demand exists for out-door flowers during the summer months.

Allwoodi Carnations

Altogether these Allwoodi carnations are bound to establish a place for themselves in the garden operations of this country, and it seems to me that they may eventually get into the trade, especially for use in window boxes, urns and the like.

---

I wonder why nobody in this country writes a book to correspond to one being put out in England by Charles H. Curtis, managing editor of the Gardeners' Chronicle. This work is called the "Book of Flower Shows," and contains a vast amount of information for the use of those who are organizing a flower show or a horticultural exhibition, or who plan to exhibit at them. It also contains full directions on the formation and conduct of a horticultural society, and there are many illustrations. It would seem as though there should be a place for a book of this sort in America, if it were written from the right viewpoint.

There is real need to impress upon the organizers of shows the desirability of making an exhibit which forms a harmonious and attractive picture in itself. Too often the tables are arranged with no thought except as to the various flowers which are to be shown thereon. That is to say, each table is treated individually. While it is possible in this way to make a careful study of each flower, there is no attempt to compose a complete and uniform picture, with the result that the visitor gets a disjointed and confused expressions of the exhibit.

95 CHAMBERS ST. NEW YORK

# The KENILWORTH Giant Pansy Seed

No.

26. **GIANT KENILWORTH CUT FLOWER MIXTURE.** Is a distinct class by itself, surpassing all other strains as a cut flower for inside or outside growing; the large flowers are carried erect above the foliage on heavy stems, 6 or 7 in. long, in the most graceful manner, and stand the hot, dry weather well. 1000 seeds 40c., ⅛ oz. $1.10, ¼ oz. $2.00, ½ oz. $3.75, oz. $7.50, 4 ozs. $27.00.

28. **GIANT MASTERPIECE.** A remarkable type, the curled, wavy petals giving the flower a double appearance; large flowers of great substance, on long, strong stems. 1000 seeds 40c., ⅛ oz. $1.10, ¼ oz. $2.00, ½ oz. $3.75, oz. $7.50, 4 ozs. $27.00.

30. **GIANT THREE AND FIVE BLOTCHED PANSIES.** A superb mixture. Flowers large and of circular form and of great substance. The display of coloring is unsurpassed. A combination of almost every shade of rich, velvety colors; reds are particularly conspicuous, the petals being distinctly marked with three or five large, dark blotches. 1000 seeds, 35c., ⅛ oz. 90c., ¼ oz. $1.65, ½ oz. $3.00, oz. $6.00, 4 ozs. $21.50.

32. **GIANT PARISIAN.** The flowers are of enormous size and beautifully marked, mostly five dark blotches on white and yellow ground; an unusually showy mixture. 1000 seeds 35c., ⅛ oz. 90c., ¼ oz. $1.65, ½ oz. $3.00, oz. $6.00, 4 ozs. $21.50.

34. **GIANT BRONZE.** A fine mixture of all shades of velvety brown bronze. Havana brown, majogany and copper shades. 1000 seeds, 35c., ⅛ oz. 90c., ½ oz. $1.65, ½ oz. $3.00, oz. $6.00, 4 ozs. $21.50.

36. **TRIUMPH OF GIANT.** Remarkably beautiful. The imposing five-spotted flowers on long, vigorous stalks surmount the foliage in the most graceful manner, are of enormous size, perfectly round and of unusual substance. The individual petals are very broad and cover each other in such a manner as to make the flowers appear almost double, the border of every petal being conspicuously curled. The plants are of a robust growth and form compact bushes of a round shape. 1000 seeds 35c., ⅛ oz. 90c., ¼ oz. $1.65, ½ oz. $3.00, oz. $6.00, 4 ozs. $21.50.

40. **GIANT BATH'S EMPRESS.** The finest of fancy English Pansies. Flowers are very large, mostly frilled and blotched and of great substance and the colors are brilliant and varied. 1000 seeds 40c., ⅛ oz. $1.10, ¼ oz. $2.00, ½ oz. $3.75, oz. $7.50.

No.

12. **KENILWORTH GIANT PRIZE.** I have improved this strain by selecting and saving seed from the best shaped flowers of the most gorgeous color for many years. It is of the blocked Masterpiece type. The plants distinguish themselves by their robust growth and healthy-looking foliage; they are deep rooted and stand the hot, dry weather better than most other varieties. The large flowers on long, thick stems are carried well above the foliage in the most graceful manner, are of enormous size and of good substance. The petals are exceedingly broad and cover each other in such a manner as to make the flowers appear almost double. The border of each petal being conspicuously undulated and curled, the gorgeous and varied colored blossoms of velvety texture, perfect form and giant size, frequently measuring 3½ in. in diameter; the ground color such as yellow, white, deep orange, mahogany brown, bronze blue, and endless variations. Most petals are beautifully marked with a large blotch, a few are self-colored. They are specially fine for planting under glass or outside for cut flowers at all seasons. 500 seeds, 30c.; 1000 seeds, 50c.; ⅛ oz. $1.10; ¼ oz. $2.50; ½ oz. $5.00, oz. $10.00, 4 ozs. $35.00.

10. **KENILWORTH GIANT EXHIBITION** is the very finest complete mixture ever sent out. Seed carefully saved only from marked plants of the best varieties, with the largest and best shaped flowers and richest coloring. It is impossible to convey an adequate idea of the delightful variations in color and markings of this unrivaled mixture. 500 seeds, 30c., 1000 seeds 50c., ⅛ oz. $1.35, ¼ oz. $2.50, oz. $10.00, 4 ozs. $35.00.

19. **TRIMARDEAU GIANT PANSY.** Improved; it is far superior to the ordinary run of Trimardeau that is sold. It is a very showy class of vigorous, compact growth. Flowers of enormous size in all the self colors, blocked, striped, margined, etc. It is very doubtful if any other Pansy will give as good satisfaction as the improved Trimardeau for all general purposes. 1000 seeds 30c., 3000 seeds 75c., ¼ oz. $1.35, ½ oz. $2.50, oz. $5.00, 4 ozs. $18.00.

**GIANT TRIMARDEAU No. 2.** While not equal to the improved, is a good mixture containing all colors and will give good satisfaction where a mixture of moderate price is desired. 1000 seeds 20c., ¼ oz. 80c., ½ oz. $1.50, oz. $3.00, 4 ozs. $11.00.

20. **PRINCESS,** (The New Upright Pansy). This strain is entirely distinct from all others. It is absolutely compact, upright growing. The flowers are mostly blotched and frilled like the Masterpiece of good form and heavy velvety texture, on heavy stems, carried well above the foliage. Attractive by the brilliancy of its colors. 1000 seeds, 35c., ⅛ oz. 90c., ¼ oz. $1.65, ½ oz. $3.00, oz. $6.00.

22. **GIANT KENILWORTH STRAIN.** The flowers are of perfect form and substance; many of the immense flowers are 3-in. It is a striking collection of beautiful colors and markings, rich with shades of red, brown, bronze, mahogany and many others too numerous to mention. Light, medium or dark mixtures. 1000 seeds 35c., ⅛ oz. 90c., ¼ oz. $1.65, ½ oz. $3.00, oz. $6.00, 4 ozs. $21.50.

24. **GIANT KENILWORTH SHOW** is undoubtedly the largest flowered Pansy in the world; the immense flowers are of circular form. A beautiful collection of colors and markings. 1000 seeds 40c., ⅛ oz. $1.10, ¼ oz. $2.00, ½ oz. $3.75, oz. $7.50, 4 ozs. $27.00.

**THE EARLY FLOWERING or WINTER BLOOMING GIANT PANSIES** in all colors or mixed. 1000 seeds 60c., ⅛ oz. $1.10, ¼ oz. $2.00, oz. $7.50.

70. **ORCHID FLOWERED, Mixed.** A dwarf, free bloomer, with a range of delicate colors that do not exist in any other Pansies; a remarkable combination of light rose, shell-pink, blush mauve, fawn, light brown, orange and chamois. 1000 seeds 30c., 4000 seeds $1.00, ¼ oz. $1.30, ½ oz. $2.50, oz. $5.00, 4 ozs. $18.00.

## GIANT PANSY SEED

**In Separate Colors**

1000 seeds 30c., any 4 packets, $1.00, ¼ oz. $1.30, ½ oz. $2.50, oz. $5.00.

38. **Mme. Perret.** Red and wine shades.
42. **Adonis.** Light blue, dark center.
44. **Black.** Almost coal black.
48. **Lord Beaconsfield.** Purple, shaded white.
50. **Goliath.** Large, curled yellow, blotched.
54. **Pres. Carnot.** White, five blue blotches.
56. **Light Blue Shades.**
58. **Indigo Blue.** Deep, velvety blue.
60. **Hortensia-Red.** Light rose.
62. **Prince Henry.** Dark blue.
63. **Ruby King.** Superb crimson and red.
64. **Snow Queen.** Beautiful satiny white.
66. **Almond Blossom.** Delicate rose.
68. **Andromeda.** Curled Apple blossom.
74. **Sunlight.** Yellow, with brown blotches
80. **Purple.** Large, rich deep color.
82. **Giant Peacock.** Rich ultramarine blue.
84. **Mercury.** New. A deep blackish purple.
86. **Pres. McKinley.** Yellow, dark blotched.
88. **Emp. Franz Joseph.** White, blotched blue.
90. **Vulcan.** Dark red, with five blotches.
92. **Victoria.** Blood red, violet blotches.
94. **Red.** A collection of rich red shades.
98. **Psyche.** Curled white, with five blotches.
100. **Yellow.** With dark blotch.
102. **Yellow.** Large golden yellow.
104. **White.** With violet blotch.
106. **White.** Large satiny-white.
108. **Emp. William.** Ultramarine blue.
110. The preceding 29 colors mixed.

Chas. Frost
35 Cross St.
Kenilworth, N.J.

## NATIONAL ASSOCIATION OF GARDENERS

A conference of the members of the association located in Nassau County, N. Y., will be held Thursday afternoon, July 28, at three o'clock, at the Nassau County Club House, located at Glen Cove, L. I., for the purpose of considering the organization of a local branch of the association in Nassau County. The purpose of this branch is to protect the interests and general welfare of the members of the gardening profession against interlopers who profess to be gardeners and also the so-called experts who offer their services in an advisory capacity while possessing but little more than rudimental knowledge on what they propose to advise.

The committee in charge of arrangements for the annual convention of the association, to be held in New York, October 11 to 14, has held several meetings to perfect its plans. While entertainment for the visiting members is not to be overlooked, there will be much business to be disposed of, with particular attention to the future of professional gardeners in America. Visiting members will be entertained on the estate of John D. Rockefeller, Pocantico Hills, and at "Greystone," the estate of Samuel Untermeyer, Yonkers, N. Y. A shore dinner at one of the nearby seashore resorts will also be included in the program of entertainment. The Park Avenue Hotel has been selected as the headquarters and meeting place for the convention.

# S. A. F. & O. H. Department

### The National Publicity Campaign

The following subscriptions to the campaign are in addition to those already announced for the year:

| | |
|---|---|
| St. Louis Florists' Publicity, St. Louis, Mo. | $887.08 |
| Steinbrenner & King Co., Cleveland, O. | 10.00 |
| A. E. Fencher, Binghampton, N. Y. | 10.00 |
| F. Wm. Heckenkamp, Jr., Quincy, Ill. | 20.00 |
| H. W. Allersma, Grand Rapids, Mich. | 5.00 |
| R. E. Hannaford, Portsmouth, N. H. | 2.00 |
| Gove The Florists, Burlington, Vt. | 10.00 |
| Cunningham Flower Shop, Amarillo, Texas | 5.00 |
| Chas. Schwacke Co., New York City | 25.00 |
| Koenig Floral Co., St. Louis, Mo. | 25.00 |
| Wm. L. Rock Flower Co., Kansas City, Mo. | 200.00 |
| Allied Florists Assn. of Ill., Chicago, Ill. | 900.00 |
| Charles Swanson, Chicago, Ill. | 25.00 |
| J. B. Goetz Sons, Saginaw, Mich. | 10.00 |
| Walter Armacost & Co., Sawtelle, Calif. | 50.00 |
| Gustav A. Dohl, Milwaukee, Wis. | 5.00 |
| Charles Ederer, Omaha, Neb. | 5.00 |
| The Saltford Flower Shop, Poughkeepsie, N. Y. | 50.00 |
| Max H. Rothke, Philadelphia, Pa. | 5.00 |
| Byron Bailey, Keat, Ohio | 10.00 |
| | $2,259.08 |
| Previously reported | 25,498.60 |
| | $27,757.68 |

The contribution of the Allied Florists' Trade Association of Chicago is additional to several other nice contributions from this association, the result of the apportionment to the National Campaign of 25 per cent of their entire collections for publicity, in accordance with their plan of organization. The contribution of the St. Louis florists is sent in under the same plan, and is a further payment. Other cities are contributing along the same lines; in making this latter contribution, Secretary Beneke remarks that St. Louis is now forming an allied florists' trade association, which means that in all probability the St. Louis contributions will grow larger in the coming year.

The Secretary is most anxious to present at the forthcoming Convention in Washington a good report on the progress of the Campaign, therefore all who have not yet sent in cheques to cover their pledges are urged to do so without delay. It may again be mentioned that just as soon as the Publicity Committee find the fund sufficient to enable them to resume advertising, in the national magazines, they will place the contracts which they have had under consideration.

**Nurserymen, Take Notice**

From the Massachusetts Agricultural College comes an announcement which is of tremendous importance to nurserymen everywhere. Dr. J. K. Shaw, research professor of pomology, has worked out a system of identifying nursery trees by their leaves. So far as is known, no other research specialist or fruit grower has succeeded in establishing this positive identification. For that reason Dr. Shaw's system will be received with greatest interest. It has already been tested by prominent specialists and state officials, but is to be given to the public for the first time the coming week, when some important meetings are to be held at the College.

So far the system has been confined to fruit trees, but there seems to be no reason why it should not be extended to ornamentals. It is in the matter of fruit trees, though, that the greatest number of complaints are heard. And when it becomes possible for nurserymen everywhere to identify all their stock by the leaves, it will remove from the business much of the uncertainty which now exists, and will make it impossible for the nursery fakir to continue in business unless he reforms his methods. In other words, there will be no excuse for selling trees which are not true to name.

It has taken Dr. Shaw seven years to work out this system of identifying nursery trees by their leaves, and he has not yet put the system into print. Its importance has been recognized to such an extent, however, that plans are now under way for its immediate application. It is stated that Dr. Shaw can teach anyone in one or two days how to make this positive identification from the leaves alone. Of the 1,100 trees which he has inspected at the College, over a period of years, he has made a mistake in just one instance.

Reputable nurserymen who have been informed of the system are eager to have it put into operation, realizing that it will be of immense benefit to them. A plan is now under way for inspecting and guaranteeing nursery stock, so that there will be no guess work in its sale. It is believed that a student of Dr. Shaw's method can be sent through the nurseries while the trees are in leaf, identifying and labeling them according to the new system. Then a certificate of stock can be issued that will mean certainty instead of worry to the orchardist and set up a new standard of business integrity for honest nurserymen.

Any group of buyers will then be able to engage a competent man to go through the nursery where they expect to place their orders and make certain that the trees which are to be delivered to them will be the trees they want.

If this plan works out as expected, it will go far towards revolutionizing the nursery trade, and be of incalculable value to nurserymen themselves, as well as to those who buy nursery stock. It is not surprising that nurserymen dealing in fruit trees are giving Dr. Shaw their hearty backing. When the new plan of identification is explained at Amherst, it will be received with keenest interest.

**Going Visiting**

Isn't it possible that florists and gardeners do not do enough visiting? It pays at this season of the year to get out and around. No more fruitful source of suggestion for the betterment of one's own methods can be found than a visit to the greenhouses or the gardens of other men in the same line of work. No one man knows it all. It is impossible to make a series of visits without finding a solution to some of the problems which have vexed you. The results shouldn't be altogether one sided, either. You should be just as willing to tell the other fellow what you have learned that will help him as to take any suggestions based on his experiments. Once in a while, to be sure, you will find a florist or gardener who is secretive and who seems to think that you are trying to steal the basis of his business. This is largely nonsense, and the average man in the trade realizes that fact.

Some florists and gardeners make it a practice to drive about the country during the summer, visiting well-established plants and swapping experiences. When this is done in a friendly attitude and with a perfect willingness to give as well as to take, the results are sure to be pleasant as well as profitable.

By and by the people whom you visit will doubtless return the call, and then again you will have an opportunity to learn something which will be to your advantage as well perhaps as helping the other fellow. There ought to be a peculiar mellowness in the dealings of florists and gardeners, one with the other. Their work is conducive to that sort of thing, and the trade will benefit from the interchange of views and experiences. What is needed more than any other one thing perhaps in the florist business is a greater degree of co-operation, and there is no better way of fostering the get-together spirit than by obtaining a personal knowledge of the other man's problems. By all means, therefore, let us get out and around while the summer months are here.

# "Montgomery's Priscilla"

That's the name of the new pink rose! The name will be "Priscilla" probably after the public has had it a while, but we have had to add the prefix to cover the rules of nomenclature.

In order to get someone who knows more about roses than we do to give an unbiased, honest opinion on the merits of this rose, we have placed 12 plants of it with each of the following rose growers:

E. G. HILL CO., Richmond, Ind.
DAILLEDOUZE BROS., Brooklyn, N. Y.
ALBERT H. AMLING CO., Maywood, Ill.
DUCKHAM-PIERSON CO., Madison, N. J.
ROWAYTON GREENHOUSES, Rowayton, Conn.
MILLER FLORAL CO., Farmington, Utah
WELLWORTH FARM GREENHOUSES, Downers Grove, Ill.
A. S. BURNS, JR., Spring Valley, N. Y.
ROBT. SIMPSON, Clifton, N. J.
CHAS. H. TOTTY CO., Madison, N. J.
NOE-RUZICKA CO., Madison, N. J.
WM. H. ELLIOTT CO., Madbury, N. H.
ANTHONY RUZICKA, Madison, N. J.
W. J. PILCHER, Kirkwood, Mo.
JOS. HEACOCK CO., Roeloffs, Pa.
WENDLAND & KEIMEL, Elmhurst, Ill.
JOY FLORAL CO., Nashville, Tenn.
ROBERTS ROSE CO., Denver, Colo.
GEO. C. WEILAND, Evanston, Ill.
LAKEVIEW ROSE GARDENS, Jamestown, N. Y.
BASSETT & WASHBURN, Hinsdale, Ill.
HARRY O. MAY, Summit, N. J.
F. R. PIERSON, Tarrytown, N. Y.
L. B. CODDINGTON, Murray Hill, N. J.
JOS. H. HILL CO., Richmond, Ind.
STEPHEN MORTENSEN, Southampton, Pa.

Ask them about it, if you will, at any time. They have our permission to tell the truth. We are going to let this rose sell itself! We shall be simply order takers.

A. N. PIERSON, Inc. Cromwell, Conn.

## JULY.

A tinkle of fairy music is heard in the woods today, for the pyrola is hanging out its bells above the pine needles where the Indians left their moccasins in June. By the brook, blue with forgetmenots, Joe Pye has gathered his pink blossoms and the yellow loosestrife lifts up its feathery stalks. A bunch of orange butterfly weed is as gorgeous as its winged friends, and by the stone bridge a regal Japanese iris mirrors its snow white beauty in the stream.

## THE WASHINGTON PROGRAM

### Many Important Addresses Planned for S. A. F. Convention

The program of the 37th annual convention of the Society of American Florists and Ornamental Horticulturists, to be held at Washington, August 16-18, has now been completed.

Among the principal features are the following:

**Tuesday, August 16, 10.30 A. M.**

Invocation by Rev. Dr. James Shera Montgomery, Chaplain of U. S. House of Representatives.

Convention called to order by Otto Baner, President of Florists' Club of Washington, D. C.

Address of welcome in behalf of the District of Columbia, by Hon. Cuno H. Randolph, President Board of Commissioners, District of Columbia.

Address of welcome in behalf of the United States, by Henry C. Wallace, Secretary of Agriculture.

Address of welcome in behalf of the florists of Washington, by John Henry Small.

Response by Past President John K. M. L. Farquhar, Boston, Mass.

President Thomas Roland's Address.

Reading of reports.

**Afternoon Session, 2 P. M.**

Address: "Greenhouse Heating the Heart of the Business," by F. T. Giblin, Utica, N. Y.

Address: "What the Agricultural Colleges are Doing for the Florists," by Prof. H. B. Dorner, Urbana, Ill.

Discussion of Amendments to Constitution and By-Laws, and voting on same.

President's reception. The function will take place in the New Washington Hotel. In accordance with President Roland's request, the reception will be entirely informal in character.

**Garden Seed**

BEET, CARROT, PARSNIP, RADISH and GARDEN PEA SEED in variety; also other items of the short crop of this past season as well as a full line of Garden Seeds, will be quoted you upon application to

**S. D. Woodruff & Sons**
82 Dey St., NEW YORK
and ORANGE, CONN.

# FERNS

POT-GROWN STOCK 2¼-INCH

| | 100 | 1000 |

HALL'S HONEYSUCKLE, 6-in. pots 3 ft. bushy staked plants $40 per 100.
AMPELOPSIS Veitchii, in 4-in. pots, 3-yr.-old, staked, at $35.00 per 100.
AMPELOPSIS Crinkafolia, 5½-in. pots, at $35.00 per 100.

A. L. MILLER, Jamaica, N. Y.

It is suggested that the most comfortable clothing will be best appropriate for the occasion.

Ballot for next place of meeting.

**August 17, Morning Session, 9.30 A. M.**

Address: "Providing Stock in Substitution for Material Excluded from Importation Under Quarantine Order 37." Prof. L. C. Corbett, Bureau of Plant Industry, U. S. Department of Agriculture, Washington, D. C.

Discussion: "Dutch Bulbs—The Unloading of Exporters' Surplus Stocks on the American Market." This subject is called up on the recommendation of the executive board. The discussion will be opened by the reading of the report of a special committee appointed, under a resolution passed

Pres. Thomas Roland, who will preside at the Convention

at the meeting of the board in January last, to gather data in the matter.

**Afternoon Session—2 P. M.**

Report of the Committee on Publicity—Henry Penn, Boston, Chairman.

Address: "Publicity for Forists.' by L. D. Fernald, Advertising Manager of the New York Post, New York.

Address: "National Publicity," by Major P. F. O'Keefe, Boston, Mass.

**Third Day, August 18th—Morning Session, 9.30 A. M.**

Election of officers for 1922. Polls open from 10 A. M. to 11 A. M., or until all in line have voted. Voting will be conducted under the new system. There will be five voting places, "A" to "D" inclusive; "E" to "K" inclusive; "L" to "P" inclusive; "Q" to "T" inclusive; "U" to "Z" inclusive. Please vote promptly. Only members in good standing can vote.

Address: "The Value of Flower Shows in Publicity for the Florists' Industry," by C. H. Totty, Madison, N. J.

**Afternoon Session—2 P. M.**

Address: "Maintenance of Soil Fertility," by Prof. James H. Beattie, Horticulturist, U. S. Department of Agriculture, Washington, D. C.

Demonstration of flower arrangements, by Max Schling, New York.

Florists' Telegraph Delivery Association. A general conference, at which F. T. D. President Breitmeyer will preside.

### HEATHER IN THE ARNOLD ARBORETUM

Of the true Heaths only the red and white-flowered forms of Erica carnea are perfectly hardy here. This is a native of the mountains of central Europe, and an evergreen plant only a few inches high which spreads gradually into a broad mat. It is one of the first plants to flower in the Arboretum, and this year was in full bloom on the 15th of March. This is one of the best small evergreen shrubs for a sunny Massachusetts rockery. Erica tetralix and E. vagans, two handsome European

species, have sometimes lived for two or three years at a time in the Arboretum, but have not proved very hardy in any of the positions where they have been planted.

### FLORISTS' BANQUET

The Boston Florists' Association held its annual outing at Nantasket Beach, July 12. About fifty ladies and gentlemen were present, and greatly enjoyed an excellent banquet, which was served in the Palm Gardens at Paragon Park. The tables were lavishly decorated and during the evening most of the flowers were presented to the singers and dancers who added to the evening's pleasure. Mr. Stone, proprietor of the Palm Garden, is personally acquainted with many of the florists, and did his best to make the occasion a success.

The only unpleasant feature of the evening came when the party broke up. It was discovered then that owing to the fog the last boat for Boston had been abandoned, so that those who had made the trip down by boat had to get back to town as best they could, many of them taking advantage of the kindness of their friends who had machines.

Dr. Gilbert, Commissioner of Agriculture in Massachusetts, has issued a warning against the planting of Flanders poppies. He states that this poppy is a dangerous weed, and one that spreads with amazing rapidity, crowding out grass and reducing the yield of grain wherever it becomes established. According to Dr. Gilbert, there is danger that it will become a bad pest in this country

Everybody wants to push his business. One of the means is to join a Society. After he has been in the Society a while he finds out that he is pushing everybody's business as well as his own—and if he is a small-minded man he objects to that. So he casts around for some expedient and hits on the idea of a "trade slogan" to which only a few shall be entitled. Then he keeps on narrowing that down until he thinks he himself is about the only one entitled to the "Hall Mark." All of which is a very narrow-minded way in which to push one's business.

The real open and above-board way is to push your business on its own merits. Societies are only side issues. They are useful in a general way and everybody ought to support them. They are an agency for spreading the general intelligence for the benefit of everybody. That is sufficient reason why you should support them. Not exclusively for your own individual advancement. That latter is why the nurserymen's trade mark stuff fell through. They had too narrow a view of what Societies are for. That they cut the trade mark thing out altogether at their last convention is a good sign.

And in that connection—why can't they come to earth, these members of all the trade societies, and get wise to the fact that it is the Amateur Societies that help the business most and not the Trade Societies.

Help the amateur enthusiasts and you will be helping yourselves indirectly. Not only help them; but indirectly stir them up to doing things. Getting them enthused. Getting them collections of this or that. Getting up exhibitions. And all the time be careful to stay in the background and let these enthusiasts get all the advertising. That's their reward. You will get yours later.

Charles Sim of Rosemont is back home after several months in the Bryn Mawr Hospital for cataract and is reported to be much improved and almost his old self again. His extensive landscaping business along the main line and elsewhere has been taken over by his nephew, William E. Edwards, who has had long experience in that line, and is well equipped to carry on the work and branch out in new directions from the foundation solidly laid by his uncle during thirty years of active and successful operations.

---

H. H. Battles had quite a nice collection of named gladioli on exhibition, July 6. Quite a number of the latest new and improved varieties.

---

Fred J. Michell, Sr., and family are summering at Avalon, N. J.

---

Fred J. Michell, Jr., and family are summering at some other Jersey haven of rest—Ocean City, I believe, but no matter. I hope they find it cool and pleasant, and that they are enjoying the sea breezes.

---

C. U. Liggit reports business quite brisk in the plant line, considering the mid-season conditions. The flower growers are quite optimistic and are doing considerable planting, not only in the regular staples, but they are also still pretty keen on promising novelties. His recent amalgamation with the Reuter Co. of Boston has greatly extended his New England influence, and has also widened his already far-flung connections to a certain extent. The more business a concern can handle, the better the contracts that can be made, both with producer and consumer. This is Mr. Liggit's guiding principle.

## THE AMERICAN ROSE SOCIETY

### Announcement Concerning the Dissemination of the Van Fleet Rose

At the meeting of the Executive Committee of The American Rose Society held in Washington, D. C., on June 1st, it was decided that the Van Fleet Rose—W C 124—which is to be called "Mary Wallace" should be the first to be disseminated under the cooperative agreement between the Department of Agriculture and The American Rose Society and co-operating nurserymen. At that time it was believed to be feasible to supply bud wood from the mother plants this summer to the various nurserymen. When this plan was announced, however, it was brought to the attention of The American Rose Society that this scheme might work hardships upon nurserymen who lived at a great distance from Washington, therefore, after consultation with the directors and with the Department of Agriculture it was decided that this plan would be abandoned and that no nurseryman would receive propagating material before next year, the exact time to be announced later.

This notice is therefore sent out to inform all nurserymen who are interested, of the change of plan, and the notice sent out that no application would be considered after July 1st is void and the secretary is still open to receive applications. Due notice of the date which application must be filed will be sent out to the trade papers and all nurserymen who have signified their interest, when further details are completed.

JOHN C. WISTER,
Secretary.

SKINNER SYSTEM OF IRRIGATION

## Principles and Practice of Pruning

By M. G. KAINS

Few practices in the handli[illegible] of plants, especially fruit bearing plants, attract so much interest as do those of pruning. The accumulation of new knowledge has become very considerable, especially in the last decade, but it is necessarily so scattered that very few growers have access to it, hence the demand for a book as this, which shall present the really important features of these investigations as well as set forth the fundamental principles based upon the laws of plant growth. This volume is lavishly illustrated mainly by actual photographs of specimens which show good and bad practices.

After a few pages of introduction the author discusses Plant Physiology as related to pruning. A chapter takes up the Philosophy of Pruning, itself, a very interesting subject. Then follows a classification and clear discussion of Buds, very fully illustrated from life. How Wounds Heal is an exceedingly interesting chapter, as are also those on Prevention and Repair of Mechanical Injuries, Pruning Nursery Stock, Young Trees, Mature Trees and Odd Methods of Pruning and Training, Rejuvenating Neglected Trees and Practical Tree Surgery. There are 400 pages in all.

Price $2.50

## Plant Propagation, Greenhouse and Nursery Practice

By M. G. KAINS

We have had many inquiries from time to time for a reliable and up-to-date book on plant propagation, but were always at a loss to find any publication that we could recommend. The subject has been dealt with in fragmentary manner only in books that have come to our notice. So it is well that this new work has been issued, especially as it is both comprehensive and practical, and it should meet with a ready sale among plantsmen, nurserymen and gardeners. There are nineteen chapters covering in detail topics of germination and longevity of seeds, propagating by buds, layering, cuttings, grafting, etc., fruit tree stocks, scions, etc., and there are eight pages of condensed cultural instructions in tabulated form, covering annuals and perennials from seed, woody plants, evergreens, vines, bulbs and tubers, greenhouse and house plants, ferns, palms, water plants, orchids and cacti. The illustrations are numerous, comprising 213 figures and halftone plates. There are 322 pages well bound and on heavy paper, teeming with helpful information. It is a book which no cultivator can afford to do without. It is worth many times its price. Copies can be supplied from the office of HORTICULTURE at publisher's price, $2.25.

739 Boylston Street Boston, Mass.

*Every Reader of "Horticulture" Needs*

## DR. L. H. BAILEY'S
# Standard Cyclopedia of Horticulture

Six large quarto volumes. More than 3,600 pages. 24 full page exquisite color plates. 96 beautiful full page halftones. More than 4,000 text engravings. 500 Collaborators. Approximately 4,000 genera, 20,000 species and 40,000 plant names.

**IMPORTANT NEW FEATURES**

**KEY TO IDENTIFICATION OF PLANTS.** This is a device to enable one to find the name of a plant. The name thus found is quickly referred to under its alphabetical location, where full information will be found in regard to it.

**SYNOPSIS OF PLANT KINGDOM.** This is one of the most important features of the new edition. It constitutes a general running account of the classes, orders, and groups of plants, with a brief sketch or characterization of 215 of the leading families comprising those that yield practically all the cultivated plants. These family descriptions give the botanical characters; the number of genera and species and the ranges; a list of the important genera; brief statements in regard to the useful plants; and diagrammatic illustrations.

**ILLUSTRATIONS.** There are 24 colored plates; 96 full page half-tones; and more than 4,000 engravings which serve as guides in the text.

**THE GLOSSARY.** This is an analysis of all technical terms that are used in the work and in similar works. It comprises botanical and horticultural terms with brief definitions.

**TRANSLATION AND PRONUNCIATION OF LATIN NAMES.** In Volume I is inserted a list of between 2,000 and 3,000 Latin words used as species—names of plants, giving the English equivalent or translation and the pronunciation.

**CLASS ARTICLES.** Special effort has been made to secure the best cultural advices for the plants requiring peculiar or particular handling. Here are some of the titles of these articles; Ants; Autumn Gardening; Bedding; Diseases; Drainage; Floral Designs; Formal Gardening; Hotbeds and Coldframes; Insects; Landscape Gardening; Lawn Planting; Orchards; Rock Gardening; Subtropical Gardening; Tools and Implements; Village Improvements; Window Boxes, etc.

**GENERAL INDEX.** The final volume contains a complete index to the entire work, enabling the reader to locate volume and page of any subject he has in mind.

WE ARE MAKING A SPECIAL CASH PRICE FOR THE COMPLETE SET OF $45.00

## A Welcome to Washington

THE florists of the Nation's Capital welcome you to your own beautiful city. With its 110,000 trees, its botanical garden and its two or three thousand acres of parks, it is a city of which you may well be proud. The florists of Washington will be glad to have you come. They will do their best to make your visit a happy one. And when you go away you will be, I believe, better citizens as well as more capable florists by having been here.

# BURPEE'S NEW SWEET PEA

# WHITE STAR

A first-class, black-seeded white Sweet Pea lacking any suspicion of pink or other coloring has long been wanted, and we now have it in WHITE STAR. The flowers are of enormous size and are freely produced in fours, all beautifully waved and well placed on the stem. They are of great substance and pure opaque whiteness, retaining their purity of color until the end. The plants are robust and branch freely and early and should therefore be allowed plenty of room in the row to avoid over-crowding.

We consider WHITE STAR to be the last word in black-seeded white varieties. It will be a boon to all florists who have had difficulty in germinating the white-seeded sorts, while the flowers with their pure, clear color will be quite as valuable.

Awarded Certificate of Merit at the International Flower Show, New York, March 14, 1921.
**Oz. $10.00; ¼ lb. $37.50, postpaid.**

Vol. XXXIV AUGUST 10, 1921 No. 3

## THE TALK OF THE TRADE

Primulinus hybrids are getting into the trade in rapidly increasing numbers. There is a grace and delicacy about this type of gladiolus not to be found in any other. Discriminating florists are finding it the most satisfactory of all kinds for sprays and more elaborate pieces. In Boston, both Carbone and Hoffman use quantities of Primulinus hybrids from the B. Hammond Tracy establishment at Wenham, Mass. At Carbone's they are used frequently for bride's bouquets and for those of the bridesmaids. Not infrequently, B. F. Letson, in charge of the decorative work, goes out to Mr. Tracy's place to match up gowns or decorations with the flowers so as to get the exact shade required for best results. In New York Max Schling uses these hybrids to a considerable extent, although New York, as a whole, does not seem to have taken to this form of gladiolus so readily as some other cities.

One common mistake made in the use of Primulinus hybrids, as in fact with all gladioli in the creation of sprays and other pieces, is using spikes that have just begun to open. The thoughtless florist then all too often nips off the top of the spikes with its buds, leaving a harsh outline to the piece. Now the economical way, as well as the most satisfactory way, to handle these flowers is to use "glads" which have bloomed almost to the tips. It is the topmost flowers which give the most grace; and, of course, when this practice is followed flowers which have stayed around the store for some time and those which are more or less imperfect can be utilized. A little thought and study will show any florist how to use Primulinus hybrids and other forms of the gladiolus so as to get better results for less money.

Florists handling Primulinus hybrids will do well to suggest to their customers the use of these flowers in

Field of Gladiolus America at B. Hammond Tracy's Establishment, Wenham, Mass.

hanging vases as well as in baskets. Their natural tendency to droop a little and their slenderness makes them especially available for such purposes. Crooked stemmed flowers which would be of little use in a general way are often especially attractive when placed in a wall vase.

Mr. Tracy tells me that he recently shipped a thousand Primulinus hybrid bulbs to a western city to be forced for the holidays. Last summer he sold 50,000 bulbs to the florists for forcing. It is evident that the florists are beginning to realize the possibilities of the Primulinus hybrid in this direction. If started early enough there is no difficulty at all in having them ready for the Christmas trade. Many of the bulbs are now relatively cheap, and it seems likely that this branch of the business will be rapidly increased.

In the last number of Horticulture there was an illustration of a wayside stand erected by a florist for the sale of cut flowers. This plan, it seems, is being adopted by nurserymen as well as by florists. The American Forestry Co. has started the sale of small evergreens in pots at its farm No. 2 in Framingham, Mass. This farm is on a much traveled road and a large number of sales are made to automobile owners who take the plants away with them. If they desire to do so, the buyers are allowed to go into the fields and pick out the specimens they desire. I suppose no serious objections would be made to their digging them themselves if they felt so inclined.

Probably this plan would not pay except where travel is heavy, for it is necessary to have a man always on hand to wait on customers, and this would create too heavy an overhead expense, unless this man was kept busy. I believe the Hicks Nurseries, on Long Island, tried the plan some years ago of allowing passersby to help themselves to whatever is offered and leave the money or send a check in payment. Apparently, however, the plan did not work out very well, because it was soon abandoned.

What the American Forestry Co. is now doing is only a forerunner, it seems, of what is being planned. Farm No. 2 is being devoted largely to retail sales, and if the present plans are carried out, a large and unusual sales department will be developed here. Visitors from the cities will be encouraged to come out and select whatever they want in the way of nursery stock, and herbaceous plants. Both will be grown in great variety in exhibition gardens so that visitors can see just what they are buying. This ought to prove a great improvement over catalogue selling, at least for nearby customers, although the catalogue of the American Forestry Co. is one of the most elaborate and decorative gotten out by any concern in the country.

It appears that the propagation of rhododendrons under glass is feasible and is being undertaken. A number of nurserymen have been offered plants grown from cuttings under glass, and

**H. E. Meader of Dover, N. H., Florist and Gladiolus Grower**

covering a wide range of popular hybrids. The price of 25 cents a plant is, of course, high, but if this work can be done successfully there seems to be no reason why lower prices should not be quoted, as stock becomes more plentiful and this line of trade developed.

Why isn't it feasible and practicable to force Lilium Regale for the Easter trade? This question has often been debated, and in point of fact, attempts to grow these lilies for Easter have been made. They have not been successful, and the growers have wondered why. The explanation is simple enough when it is understood. Mr. William Anderson, superintendent of the famous Bayard Thayer estate in Lancaster, Mass., gives the explanation. Probably Mr. Anderson knows more about the culture of these lilies than any other man in this country, having grown them in great numbers, both indoors and out. What he says, therefore, can be accepted as positive fact.

The Regal lily, it seems, starts its top growth before it makes its roots. If handled like Formosum or Harrisi it has but little strength for making blooms in the spring. There is a way, however, in which it can be handled successfully. If it is carried over a year in a pot without having the flowers cut, it will make a big mass of roots and be ready for forcing when late fall comes.

Of course, however, this involves too much labor and expense to be profitable, although it might be worth while for florists to grow specimen plants to be sold in pots. These being the facts, it is not probable that the Regal lily will ever prove a forcing flower for the florist, although without question great quantities of out-door flowers will be cut after the bulbs become more widely distributed. Some of the flowers were offered this season and were in immediate demand.

The Shoe Show held in Boston at Mechanics Hall recently was again an example of the good use of flowers. I remember very well the same show which was held last year, and how nicely it was taken care of in the way of decorations. I was prompted to visit this show again this year, particularly to see what would be done along the same lines, and I am pleased to say that I found an abundance of cut flowers of all kinds, but more particularly carnations and gladioli. I understand that the Rosary and Thomas Galvin, Inc., were responsible for the good work done in this line, and both are to be complimented on the results.

Again I say that it's a pity that more shows of this nature are not taken care of as they should be with plants and flowers. What a grand opportunity was missed along these lines at the Home Beautiful Show held in the same hall some time ago. I have been told by some of the florists that it's impossible to use flowers in Mechanics Hall to any extent on account of the gas, but there was nothing to indicate any serious trouble of this kind at the Shoe Show.

Bulbs are coming in. The first of the Dutch Golden Spur and Paper Whites will have arrived by the time this paper goes to press, and at this writing Bermuda Harrisi are in the growers' hands. In spite of all our hopes to the contrary, bulb stock will not be so plentiful as to permit any marked reduction in prices over last

year. It is particularly true that Giganteum lilies are in short supply. The only bright spot is Formosums, which bid fair to be in reasonable supply, with a price that will be probably slightly better than last year.

I find that many florists having home trade, and particularly funeral work to handle through the summer, are looking forward anxiously to a stock of the new gladiolus Lily White. Mr. H. E. Meader, of Dover, N. H., has successfully worked up a large stock of this sort, and according to my mind it is an excellent variety. It has the good quality of being very early, and has been found to be one that can be forced under glass with good flowering results. While the price is still high, it will pay any florist having ground to devote to gladioli to plant stock of the smaller sizes and work up his own supply. It multiplies readily and in general is an agreeable sort to handle.

On a recent visit I found the greenhouse of Mark Aitken, the Springfield, Mass., florist, in excellent condition all the way through. Carnation planting is going on. The rose stock gives good promise for the coming season, and the chrysanthemums are as good as any I have seen anywhere around. In the Springfield store window was a plant of Fuchsia Black Beauty, which was a wonderful sight. It stood almost six feet in height, was very shapely and loaded with blooms from top to bottom. There were a number of these plants at the greenhouse, in all sizes from three feet up, and they are kept in good condition and serve for decorative effects in many ways. They are brought back to the greenhouse often enough to keep them in good shape at all times.

There seems to be a larger quantity of Cyclamen plants grown this year than for many years past, and I can see no chance at all for a report of short supply of Cyclamens when the holidays come around. There is a big lot of well grown plants spread all over the east, at least, and from what I understand this condition also holds true in other parts of the country.

Begonias Cincinnati, Melior and Peterson are not in so heavy supply, and the sale of Poinsettias had been dragging during the early part of the season, but in the last few weeks it has picked up. Around the middle of July was a fine time to buy Poinsettia plants, as by taking the top off at that time a nicely branched plant which will not be too large to handle well could be brought into shape for the holidays, and the top carried on for smaller work. Two and one-quarter inch pots are in good strong demand now, and there is evidently enough to fill all wants.

The Garrison Hill Greenhouses, of Dover, N. H., are making many changes, from one end of the place to the other. The side walls of the house are being removed, and cement walls put in. A new heating plant is being installed also, and new benches and beds put in. In general, it is a case of repair and rebuild, and I am sure that within a few weeks this place will be in the pink of condition. The new proprietors are looking forward to a big season, and surely are doing everything that's possible to put their place in readiness for big business. When I called the rose crops were in particularly good shape. The carnations were still in the field, but they are planting heavily of these, and they will be of good marketable sorts. This place is in an ideal location for a good wholesale business north of Boston.

H. E. Meader, also of Dover, is building a new range to be devoted mostly to carnations. No doubt a large part of this stock will be used up through his own store.

## WHEN IT PAYS TO GIVE FLOWERS AWAY

What is the best course when the retailer has a surplus of flowers which threaten to spoil on his hands? Cut the price? Let them go bad and throw them out?

One florist does neither of these things, and perhaps his plan will commend itself to others. Mr. William Weaver of McAlester, Okla., gives them to his patrons. When a patron comes into the store to buy a plant, let us say, the florist takes some of the surplus flowers out of the icebox, wraps them up, and presents them. This has not interfered with his sale, it has not cost him anything (for the flowers were a loss, anyway), and it has created goodwill in the mind of the customer. Moreover (and this is worth thinking about), the flowers have not failed of their mission to bless mankind.

Mr. Weaver also frequently sends out flowers to his good customers, and he finds that it is a good plan in more ways than one. It makes lasting friends. Recently he sent two dozen roses in a basket to a patron in the hospital. "That will pay me ten times over," he commented. The lady spends $50 a month with him, on the average, and there is no likelihood that she will spend less after such a mark of thoughtfulness.

After all, isn't there a deep satisfaction in doing business, year in and year out, and decade running into decade, with people whom you can honestly call your friends?—Southern Florist.

## JOHN MATHER LUPTON

The death of John Mather Lupton occurred Monday, August first, at his home at Mattituck, N. Y. Mr. Lupton was an old time seed grower, and very well known throughout the trade. He was born in 1856 and for many years he was a regular attendant at all conventions of the American Seed Trade Association.

# CONVENTION DETAILS

## Stage All Set for the Washington Gathering — List of Judges and Exhibits

Everything points to the biggest convention this year that the S. A. F. and O. H. has ever had. Washington is a favorite convention city, and while August may be rather a warm month it is yet the time of year when florists find it easiest to get away from their business, and, as has been pointed out, there is no reason to expect warmer weather in Washington than in other parts of the country.

The florists in Washington are prepared to give the members a cordial welcome, and will make their stay thoroughly enjoyable. According to W. F. Gude, the Washington representative, who will be particularly active during the convention, the stage has been set and everything is ready for the fall of the gavel when Mr. Roland takes the chair at the opening session, August 16. Mr. Roland, who has proved a very popular president, will see a large delegation from New England among those present.

The convention hall is at 5th and K streets, and is admirably adapted for convention purposes. It is a building which was erected for a market house, and is still used for that purpose on the ground floor. It has high side walls, and a sharp arched roof, making a space where a room of great area was built in some years after the building was finished. It is in this room that the convention is to be held. The floor is on a level with the bottom of the large windows at the front of the building. There are also plenty of windows in the sides of the roof and a well lighted ventilator running the full length of the peak. Eight rows of suspended electric lamps running the full length of the hall give ample lighting facilities, and there is a large gallery across the entrance. The hall is about ten minutes' ride on several lines of cars from the center of the city.

Membership cards admit the members to the hall, and all the meetings. Secretary John Young has quarters at the New Washington Hotel, but will also have an office at the convention hall where all members should register upon arrival. A bureau of information will be maintained near the hall entrance.

### The Judges

The following are the judges of the exhibits:

Sections A, B and F: Plants, Cut Flowers, Bulbs, Seeds and Garden Requisites: A. L. Miller, New York; Julius A. Peterson, Cincinnati, Ohio, and Joseph Kohout, Libertyville, Ill.

Sections E and G: Florists' Supplies and Miscellaneous Exhibits: Max Schling, New York; F. W. C. Brown, Cleveland, O., and A. E. Gude, Washington, D. C.

Sections C and D: Boilers and Heating Apparatus and Greenhouse Structures: F. R. Pierson, Tarrytown, N. Y.; E. Allan Peirce, Waltham, Mass., and E. H. Mann, Richmond, Ind.

Adolph Gudde, Vice-President of S. A. F.

The program was published in the last issue of Horticulture. Printed programs in pamphlet form will also be obtainable at the hall.

### Other Meetings

The Ladies' Society of American Florists will meet in the New Washington Hotel, Tuesday, August 16, at 9 A. M. There will be a conference of the National Association of Gardeners at the same time. The Annual Meeting of the Florists' Hail Association of America will be held at 9 A. M., Wednesday, August 17. The College Section of the S. A. F. will meet Thursday, Aug. 18, at 9 A. M. There will also be a meeting of the Board of Directors of the American Carnation Society at the same time.

### List of Exhibitors

The list of exhibitors for the trade exhibition includes the following:

M. Adler ..... New York City
American Greenhouse Mfg. Co. ..... Chicago, Ill.
Baum's Home of Flowers, Inc. ..... Knoxville, Tenn.
H. Bayersdorfer & Co. Philadelphia, Pa.
Bobbink & Atkins ..... Rutherford, N. J.
Botanical Nursery Co. .... Lapeer, Mich.
Burlington Willow Ware Shops ..... Burlington, Ia.
Chicago Printed String Co. .. Chicago, Ill.
John Lewis Childs, Inc..Flowerfield, N. J.
Crowl Fern Co. ..... Millington, Mass.
Cohen & Hiller ..... New York City
Robert Craig Co. .. Norwood, Del. Co., Pa.
A. T. De La Mare Co., Inc. New York City
H. C. Doescher ..... New Orleans, La.
Henry A. Dreer, Inc. .. Philadelphia, Pa.

John A. Evans Co. ..... Richmond, Ind.
Ever Ready Flower Pot Cover Co. .... Buffalo, N. Y.
Henry I. Faust ..... Merion, Pa.
C. S. Ford Co. ..... Philadelphia, Pa.
Fruitland Nurseries ..... Augusta, Ga.
Carl Hagenburger ..... W. Mentor, O.
Hammond's Paint Works .. Beacon, N. Y.
S. Hanfling Co. ..... New York City
George B. Hart ..... Rochester, N. Y.
Henshaw Floral Co., Supply Dept. .... New York City
Joseph Heacock Co. ..... Wyncote, Pa.
E. G. Hill Co. ..... Richmond, Ind.
Hitchings & Co. ..... Elizabeth, N. J.
Horticulture Pub. Co. .... Boston, Mass.
Roman J. Irwin ..... New York City
Jackson & Perkins Co. .. Newark, N. Y.
Wm. F. Kasting Co. ..... Buffalo, N. Y.
Kervan & Co. ..... New York City
M. H. Levine Co. ..... New York City
C. U. Liggit ..... Philadelphia, Pa.
Lord & Burnham Co ..... Irvington-on-Hudson, N. Y.
Lion & Co. ..... New York City
Macaw Bros. .... Norwood, Del. Co., Pa.
W. A. Manda, Inc. .. South Orange, N. J.
H. F. Michell Co. .... Philadelphia, Pa.
National Bulb Farms, Inc. ..... Benton Harbor, Mich.
Nebel Mfg. Co. ..... Cleveland, Ohio
Joseph G. Neidinger Co., Philadelphia, Pa.
Orchard Paper Co. ..... St. Louis, Mo.
The Paranoid Co. ..... Cleveland, Ohio
S. S. Pennock Co. .... Philadelphia, Pa.
F. R. Pierson ..... Tarrytown, N. Y.
A. N. Pierson, Inc. .... Cromwell, Conn.
Pittsburgh Cut Flower Co. ..... Pittsburgh, Pa.
Poultry Feed Co. ..... Chicago, Ill.
Quincy Art Willow Ware Co...Quincy, Ill.
Raedlein Basket Co. ..... Chicago, Ill.
A. L. Randall Co. ..... Chicago, Ill.
M. Rice & Co. ..... Philadelphia, Pa.
Julius Roehrs Co. ..... Rutherford, N. J.
S. H. Russin ..... New York City
Schloss Bros. Ribbons, Inc. ..... New York City
Anton Schultheis .. College Point, N. Y.
Sam Seligman ..... New York City
L. C. Stroh & Sons ..... Batavia, N. Y.
Taiyo Trading Co. ..... New York City
The Excello Mfg. Co. .. Cleveland, Ohio
The George Wittbold Co. .. Chicago, Ill.
The McCallum Co. ..... Pittsburgh, Pa.
The Ove Gnatt Co. ..... La Porte, Ind.
B. Hammond Tracy .... Wenham, Mass.
The Lima Sheet Metal Prod. Co. ..... Lima, Ohio
The Quality Brands Co. .. Cleveland, Ohio
The Skinner Irrigation Co. .. Troy, Ohio
The Zane Pottery Co. ..... South Zanesville, Ohio
United Bulb Growers, Inc. ..... New York City
Vaughan's Seed Store ..... Chicago, Ill.
Wertheimer Bros. ..... New York City
Wm. M. Woodruff & Son .. Lowgap, N. C.

### CONVENTION NOTES

The official program for the Washington Convention has been mailed to all members. In addition to the program as published in the trade papers, there will be an address, at the afternoon session of the third day, by Joseph Kohout, Libertyville, Ill., on "Standardization of Grading of Cut Flowers."

It has been arranged that the President's Reception shall be held in the United States Botanic Gardens, instead of the New Washington Hotel as originally planned, and in this connection "something different" from the ordinary is promised. Not satisfied even with this innovation, efforts are now being made to have the United

# Dreer's

## CONVENTION DISPLAY

As usual, for many years past, our exhibit at the Washington Convention will consist of a comprehensive display of seasonable plants, such as Palms, Ferns, Crotons and other Decorative and Foliage Plants in a full line of commercial sizes.

Delegates to the Convention, either going or returning, are invited to stop off at Philadelphia and visit our nurseries at Riverton, New Jersey, where they are certain to find many interesting subjects.

At this writing out-door stocks promise to be exceptionally fine, particularly Cannas, Dahlias, Phloxes and our extensive assortment of Hardy Perennials, of which a great many should be at their best at this time.

Our representatives, Messrs. Karins, Goudy and Ruppert will be in attendance at the Convention and will be pleased to give detailed information.

## HENRY A. DREER

714-716 Chestnut Street Philadelphia, Pa.

States Marine Band in attendance. This is, without doubt, the finest military band in the country, and opportunities to enjoy its music are somewhat rare.

In addition, there will be bowling, golf, and shooting tournaments. All-in-all, it seems that there will be no lack of entertainment.

Following the report of the chairman of the Publicity Committee, Henry Penn, to be presented at the Washington Convention, a report on the status of the Publicity Campaign from a financial point of view will be made by George Asmus, which will undoubtedly prove of great interest to subscribers to the campaign. It is understood that this report will also touch upon the plans for a continuance of national advertising in the very near future.

A delightful automobile ride and luncheon is to be tendered the lady visitors; and it is possible that a trip to the home of George Washington at Mount Vernon, on the historic Potomac, will be arranged. Almost everybody will want to visit this charming establishment, and the boat-ride on the river will add materially to the pleasure of the trip.

### LADIES' SOCIETY OF AMERICAN FLORISTS.

The annual meeting of this society will be held in the Hotel Washington, Washington, D. C., Wednesday morning, Aug. 17, at 10.30 o'clock.

A meeting of the directors has been called for the same place and same date at 9.30 A. M.

We are hoping for many new members from this splendid co-operation on the part of the S. A. F. & O. H., and ask that you make every effort to come to Washington and enjoy the hospitality and good fellowship as a member of the L. S. A. F.

MRS. ALBERT M. HERR,
Secretary.

# "GET TOGETHER"

PRESIDENT HARDING'S phrase sums up the situation exactly —sums it up for every industry, including that of the florist.

The S. A. F. and O. H. CONVENTION has always been a "Get Together," a "get together" for the advancement of horticulture in general and the welfare of all. Fifteen hundred or two thousand delegates to the Convention at Washington would evidence co-operation in the best possible way. Will you be there?

Our own and our now famous slogan, "SAY IT WITH FLOWERS" is not only a slogan for the selling of more flowers but is a veritable call to us that as florists we live together in harmony —intermingling freely.

So I would say at this moment:—Be in Washington at the **"Get Together," August 16, 17 and 18,** and make the slogan, "SAY IT WITH FLOWERS" the keynote of all your advertising.

## A. L. MILLER

*Ex-Officio S. A. F. and O. H.* JAMAICA, L. I., N. Y.

# PEONIES FOR FLORISTS

## Twelve of the Best Varieties to be Used for Cutting

There have been many lists of the "best twelve" Peonies for cut flowers, but most of these have been made with the thought of varieties which could be obtained in large quantities at a low price. There is always the tendency to save money in the first cost, but progressive men in the trade realize that the greatest profits are in the higher grades of all kinds of merchandise. One can always find quotations for the ordinary, the first choice and extra fancy and these last prices usually vary about 50% above the first.

Look through the market in June and you will find it crowded with soft blossoms of "Fragrans" and "Queen Victoria." The time is coming when customers will call for Peonies by name as they call for roses, because the public is fast becoming educated to know the names. Of course, such an outstanding variety as Festiva Maxima will always remain in favor and probably Edulis Superba as an early pink will hold its own, but many in the list below are seldom seen in the cut flower market.

| White | Shell Pink |
|---|---|
| Early | Early |
| Festiva Maxima | Therese or Octavie Demay |
| Midseason | Midseason |
| Avalanche | Venus |
| Late | Late |
| Baroness Schroeder | La Perle or Germaine Bigot |

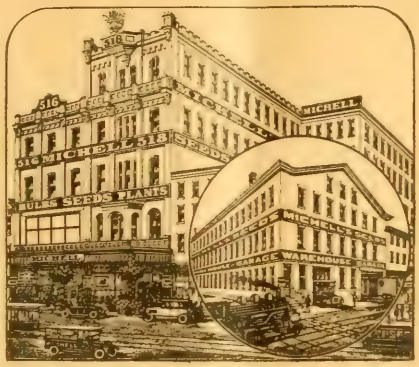
| Rose Pink | Crimson |
|---|---|
| Early | Early |
| Edulis Superba or M. Jules Elie | Richard Carvel or Augustin d'Hour |
| Midseason | Midseason |
| Lamartine (Calot) | Felix Crousse |
| Late | Late |
| Mme. Emile Galle | Masterpiece |

This list may be the object of criticism as the best, but they are all first class flowers and ones which will be in demand for years to come. A smaller quantity of the higher priced varieties may be grown and divided in three or four years, when the grower will have a stock of plants from which he can produce the "extra selected" blooms.—Winthrop Thurlow.

### NEWS NOTES

Robert C. Harris, the well known florist of Somerville, Mass., has recently purchased a handsome new delivery truck. Mr. Harris reports that for several weeks this spring he was obliged to work night and day to keep up with his orders for wedding and funeral flowers.

Contract for the erection of a greenhouse at Buttonwood Park, New Bedford, Mass., has been awarded to the F. E. Earle Co., of that city, the price being $8,666.



A Field of Festiva Maxima Peonies

## George Watson's Corner

"You in your small corner and me in mine."

A new white gladiolus from Cincinnati has been on exhibition in Philadelphia recently, and has excited much favorable comment. It is a cross between America and May and produces pure white flowers without any tinge of orange—or sprinkle of other color on the lower petals. It is a real pure white, and the stamens are scarcely noticeable. The stems are long and vigorous, with twelve to sixteen flowers, and these last nicely from ten to sixteen days in development. The raiser, Mr. Pomert, says it is the best grower and producer in the field, alongside of all other whites, and the cut flowers when sent to market have always had the first call and brought the best prices. We have been having some very magnificent gladioli coming to the Philadelphia market this season—whites as well as other colors—which for size, form and finish we have never seen surpassed, so that when our Cincinnati novelty is put alongside, it does not seem so wonderful; but if the point made in regard to its prolific bearing is considered it may be a winner—even in the champion field race—for dollars always count in the long run as to which variety will survive. We expect to get another exhibit from Mr. Pomert this season, and we have told him that he must not judge the Cincinnati market too liberally as a criterion—for the Philadelphia, New York and Boston markets have really been showing us some wonderful gladioli in recent years. This may sound a little like the "you've got to show me" of the boy from Missouri; but it does not mean quite that. In fact, quite the opposite. We are really anxious to be convinced, and will be glad to hear Mr. Pomert's own side of the proposition. We are for the advancement of horticulture and horticulture knows no latitude nor longitude, king, country, tradition nor government. It is world wide and untrammeled. So let us see and hear a little more of your new white, Mr. Pomert.

And talking about gladioli, the best of them seem to be in their glory in July, and there does not happen to be any flower show in July to speak of where they could be seen at their best at some point in the northern central eastern states. Why not get

The House of MICHELL

extends a cordial invitation to every florist, seedsman, nurseryman and others to visit our establishment in Philadelphia, en route to or returning from the Convention. You will find it an up-to-date combination of modern merchandise, aggressive methods and courteous treatment, coupled with a hearty welcome.

At the Convention you will find us represented by a large display of goods in charge of A. F. Eilers, J. H. Bockman, D. J. Keohane and Chas. A. Goudy. They will lend you any assistance in their power and they will be glad to do business.

MICHELL'S SEED HOUSE

518-516 MARKET ST., PHILA., PA.

up a good gladioli show in Philadelphia, New York or Atlantic City in July. We would be astonished and delighted, and the glorious gladiolus would shine!

---

The convention in August is a good time for some things—asters for instance; but many of our best gladioli are passed by that time. So a July show for the gladiolus would seem to be in order. Let us give the Glads the Glad Hand!!

---

The Battles windows are always up to date, and even in midsummer have interesting oddities interspersed with the regular staples. We notice, for instance, that rarely seen gem, the Monkshood (Aconitum napellus), a stinky, blue, fairy gem, of the loveliest dark shade of blue, a shade of the deepest and purest, unequalled probably outside some of the varieties of Delphinium. There also we are charmed with that odd and dainty annual Love-in-a-Mist (Nigella Damascena) which we seldom see in a florist's window. All these odd touches attract the public and are good advertising. H. H. Battles is an adept in that line, and is always giving us something to look at out of the ordinary.

---

Hosea Waterer is enjoying a well earned holiday in England, renewing acquaintance with the scenes of his early boyhood days. He is accompanied by his son, Harry. His business in Philadelphia is being well looked after in the meantime by his son, Tony, who reports business unusually brisk for the season, having booked some big orders for permanent pasture and lawn and golf courses.

Mr. and Mrs. J. D. Eisele left on an extended vacation trip on the 2nd inst. They expect to spend some time in California and other points of interest on the Pacific coast.

---

"The Bright Spot," that's what Robert told us we should say, in telling his story to our readers. It was a happy thought—for the Craig place at Norwood is really a "Bright Spot" in the horticultural world around Philadelphia. It never looked better than on the occasion of our last visit (July 27), and the heads of the different departments, the expert growers in the various classes, and the management generally, show up-to-the-minute ability in all directions. We certainly must take our hats off to the Craig boys this year, for they have the best grown and best finished stuff we have ever seen on their place at this season of the year. Forty thousand Areca lutescens—just think of it—all sizes—and in the pink of condition. You won't see another such galaxy in the United States, no matter where you go.

And their Phoenix Roeblin are also fine. They have a batch of seedlings also of this now prohibited beauty that will be heard from as the years roll by. Pandanus Veitchi is in the pink of perfection and occupying much space; clean, shining, perfect; we bow to the fine showing as we walk along. As for the ferns: we must not begin to enlarge on them in this brief review. Teddy Junior is perhaps the biggest favorite, although Scotti still holds a strong niche in public esteem. Norwood is coming to the front among the newer types, and they find it difficult to keep pace with the demand. The Verona, the lovely lace leaved variety, is also a comer, and holds a place all by itself. If you don't know Verona, get busy. She's a dainty, graceful, strong, robust, lasting, beautiful and altogether much to be desired creature. Sells on sight. They all want her. As to the cyclamen vistas they look fine; but this is no time to talk about them. Wait until nearer Christmas. The same as to Poinsettias and Ericas, and things like that. They are fine and interesting, but they can wait. Pride of Newcastle, one of the Lorraine type of Begonia, is an exception. It blooms all the time, Robert says. As for the Crotons, Dracenas, and things like that, they are there in all their glory; but enough has been said for the present to whet your appetite for a visit to "The Bright Spot."

---

J. O. Zipperer is the latest recruit to the Peacock Company sales forces. He will be on outside service mostly, and will cover the territory of Mr. Price, who has taken up another line. Our friends in the trade will find Mr. Zipperer a mild and pleasant young gentleman, and we bespeak for him a kindly welcome on his first trip.

---

Recent visitors include P. Joseph Lynch, Indianapolis, Ind.; Edward H. Flood, vice president, Johnston Brokerage Co., Pittsburgh, Pa.; W. H. Small, A. W. Schisler Seed Co., St. Louis, Mo.; H. L. Holmes, Jr., Holmes Letherman Seed Co., Canton, O., and Robert Pyle, Conard & Jones Co., West Grove, Pa.

---

Harry Dawson, of the Eastern Nurseries, at Holliston, is recovering from a severe illness. Mr. Dawson is the son of the late Jackson Dawson of the Arnold Arboretum.

# RAMBLING OBSERVATIONS OF A ROVING GARDENER

I am rather pleased to see that Mr. J. K. Alexander, of East Bridgewater, Mass., is featuring the famous Hollis peonies which he bought about seven years ago. The late George Hollis, of South Weymouth, Mass., was one of the men who helped to make New England the center of the country's peony growing interests. It is true that he was not always over particular in regard to keeping his varieties straight, and many of his introductions were practically duplicates. At the same time he gave peony lovers a number of remarkably fine kinds, and his name will go down in history as one of the most notable of the early peony specialists.

Mr. Alexander is to be congratulated on having come into possession of the Hollis stock. This stock was acquired three years after Mr. Hollis's death, and some of the labels had been lost. For that reason it has taken Mr. Alexander some time to get the collection properly named and to make certain that those already named were true. Even yet he is not ready to offer some of the best of the Hollis varieties, but will have the collection thoroughly marked up within another year or two.

In the list now being offered I notice such varieties as Admiral Togo, Attraction, Beauty's Mask, Hity Tity, Mary A. Livermore, Welcome Guest, and Standard Bearer.

---

Although there are several famous peony growers in others parts of the country, men having large collections, yet there is no doubt, I think, that peony growing is carried on more extensively in proportion to the population within a two-hundred-mile radius of Boston than anywhere else in the world.

Peonies seem to thrive especially well in New England soil, although possibly they may not take on quite as much size as in some of the western fields. One thing is certain. There never was so much interest in peony growing, and this interest seems to be increasing every year.

Lee R. Bonnewitz, former president of the American Peony Growers' Association, is a man of original ideas, as is shown by the bulletins which he gets out at his own expense, making comments on other people's as well as on his own. In his report of the recent show at Boston, he has this to say about the exhibition of the Cherry Hill Nurseries, which was the outstanding feature of the show:

"As you have noticed in the published reports of the show, T. C. Thurlow's Sons, of West Newbury, Mass., exhibited ten times as many blooms as all the other exhibitors combined, and the thanks of the society are due them for the great expense in time and money which they went to, in order to make this show all it could be made. They told me they could have done much better a week or ten days earlier, and I feel sure that the blooms that they would have shown us at that date would have been a great deal finer than the ones we saw, because many of the choice varieties had been kept in storage for this occasion. I was greatly pleased with their peony, Mrs. C. S. Minot, and I hope to have it in my own garden. It is not a very full peony, but it is more charming than if it were too heavily loaded with petals. Its color is pink of lilac tone and I do not know of any other peony with which to compare it.

"Mrs. Havemeyer, E. C. Shaw and President Wilson, three of their new seedlings, look to me to have great merit. Of the entire display of Thurlow seedlings, President Wilson appealed to me as being the best, possibly because I had seen some most excellent blooms from it in my own garden. It retains its pink until the last petal drops and it holds its form and shape better than ninety-five per cent of the peonies I know. I predict that both it and the new Dessert peony, Jeannot, will get into the prize-winning class in the near future. Of the newest peonies these two pleased me most."

---

When members of the Massachusetts Nurserymen's Association visited the Framingham Nurseries recently they found a generous planting of Daphne cneorum in full bloom. There seemed to be two distinct strains of this Daphne, and I was glad to find that the most desirable kind was being distributed. One form of the Daphne cneorum blooms only in the spring. The other form, and the one which is most desirable, blooms all through the season, and likewise has better foliage than the former sort. I have seen this same Daphne at the Blue Hill Nurseries, and if I am not mistaken most of the stock has come from the Adams Nurseries at Springfield, Mass. If Mr. Adams has a large amount of this Daphne, he is very fortunate, for it is a plant which sells very readily, providing the customers can be assured that it will bloom throughout the summer. Its appeal lies not only in its dainty coloring but also in its fragrance, which is most delightful.

**Peony La Couquette**

# SWEET PEA SEED

For August to December Delivery
WINTER-FLOWERING ORCHIDS

During the past season we have made a special study of Sweet Peas and have selected varieties best for the Commercial Grower that the market affords, and we have every reason to believe our seed is as true to name, color and type as any offered.

## C. U. LIGGIT, *Wholesale Plantsman*

BULLETIN BUILDING PHILADELPHIA

NEW ENGLAND OFFICE L. J. REUTER in charge 15 CEDAR STREET WATERTOWN STATION, BOSTON

Nurserymen are reporting an increasing call for Andromedas. Formerly these plants were seldom seen, but landscape architects are now using them extensively and nurserymen are growing them in generous quantities in anticipation of that demand, which they feel certain will become very strong in the future. I have been surprised at the amount of Leucothoe catesbaei which I have seen in the different nurseries within the past few weeks. Few people realize the beauty of this plant in winter, but the public will surely buy it when it comes to know it better. The thick green leaves make a fine under cover in summer and brighten the landscape splendidly in winter when they turn a rich bronze. This is a splendid evergreen to use for edging the rhododendron or azalea beds, and is delightful as grown in the Arnold Arboretum along the banks of a running stream.

---

The members of the American Dahlia Society will be sorry to learn that Secretary E. C. Vick has had to resign in order to attend to his own business. He has given much time and effort to upbuilding the society and his work has been appreciated. While his loss will be felt, however, the Dahlia Society has its face set towards the sun, and will go forward to an even greater degree of prosperity. President Richard Vincent, Jr., says that the society is working up a wonderful show for New York City this coming fall, and as whatever Mr. Vincent sets his hand to usually proves a success, this show will doubtless be well worth seeing.

According to President Vincent, Mr. William J. Rathgeber, of New Haven, Ct., will act as secretary and treasurer until the annual election of officers, September 28. Mr. Rathgeber is well versed in the work, having been secretary of the New Haven society for a number of years. His address, in case any dahlia grower desires to write to him, is 198 Norton St., New Haven, Ct.

THE ANNUAL MEETING
of the
Florists' Hail Association of America
will be held at
CONVENTION HALL
WASHINGTON, D. C.
at 9 A. M. sharp, on
August 17th, 1921
JOHN G. ESLER, Secretary

Caras Bros. have purchased the Missoula, Mont., greenhouses, but the nursery stock is being retained by D. A. Brown. This establishment was formerly owned by Charles Dalmas, and is one of the largest in Montana, with 50,000 square feet of glass. It is said that many improvements are to be made at the greenhouse plant.

# McHUTCHISON

& Company Offers

IMMEDIATE SHIPMENT

VALLEY PIPS, Dutch or German type, in case lots of 2500 pips.
LILIUM MAGNIFICUM, 9-11", from N. Y.
KENTIA BELMOREANA and FORSTERIANA SEEDS in bushel lots.
BAMBOO CANES, natural and dyed green, all sizes, bale lots.
RAFFIA, natural and colored, 25 lbs. up.

FALL SHIPMENT

DUTCH BULBS, Tulips, Hyacinths, Narcissus, etc.
MANETTI STOCKS, English, French, Dutch.
VALLEY PIPS, German or Dutch.
CHINESE SAKED LILIES, "Selects."
JAP. LILY BULBS, F.O.B. New York, Chicago, Toronto, Denver, Seattle, etc.

## THE LATE JOHN FARQUHAR.

### Tribute to the Memory of an Unusually Able Man

John Farquhar was a man of very unusual ability. He had the advantage of great opportunities as to education; as to early training in horticulture with his father at Fyvie Castle; in the seed trade in Aberdeen with Benjamin Reid & Co.; and later as to botanical and historical research in Chiswick; so that when he hit the high pitch of the new world in Boston he was the unheralded king—for king of the horticultural trade he became, during the next thirty-five years—not only in Boston but to a large extent all over the United States—and all over the world. He was a great traveler, and visited every habitable part of the globe, with a keen eye out for anything new or good that would add to the charm and beauty of our northern hemisphere. He not only did things himself but he encouraged others in the same line.

And, added to all these good points, he was what many of our scientific men are sadly lacking in—a good mixer among the common people. He was broad-minded about everything, and was not cursed with the narrow prejudices about trivial things which so hamper the onward march and influence of many other able men.

The Late J. K. M. L. Farquhar

John Farquhar was always a man among men, and never forgot the high ideals to which we all are devoted; yet he could mix with the common folk in their merriments and be one of them, and by that same token never forgot when all was said and done—to say or do something to lead that same unthinking crowd on to something which led towards the high and the beautiful. He would sit up nights; he would travel from one end of the country to the other; he would forget his business; he would forget his family; he would forget everything in that one grand and holy enthusiasm of **"spreading a love of the beautiful in nature among the common people."** That is his crown of glory now that he has gone to rest with his fathers, and we, who are left behind, take off our hats, and bow in holy reverence, and say, God bless his soul. May he rest in peace for evermore, and in everlasting bliss!

GEORGE WATSON.

Three greenhouses have been torn down by the Pahud Floral Co., of Indianapolis, and a new house, 150x24 feet, is being erected. This plant was established by Alfred Pahud 35 years ago, and from one house has increased to fifteen. The business was bought by Mr. Pahud's sons, Charles and Harry, and his daughter, Mrs. Louise Pahud Asperger, some two years ago.

Showing the Rolling Character of the Nursery

# Where Quality Comes First

## A Visit to the Famous Cherry Hill Nurseries at West Newbury, Mass.

Readers of Horticulture who have been following the advertisements of T. C. Thurlow's Sons, Inc., may have formed the opinion that the Cherry Hill Nurseries of West Newbury, Mass., grow peonies exclusively. This is by no means the fact. While this nursery has, undoubtedly, the largest stock of high grade peonies in New England, if not in the United States, peony growing is only one branch of the extensive business which this concern carries on. In point of fact, fine evergreens are as much a specialty as are the peonies themselves.

There are, of course, large blocks of deciduous trees and shrubs, but the evergreens are what appeal first to the visitor. It is not that the Cherry Hill Nursery endeavors to grow a great quantity of material, although with nearly three hundred acres of land available there is ample space. Quality is the dominant note. The company's business, which has been trebled in the last six or seven years, has always been based on quality, a fact which is readily understood when one walks through the fields and views the trees as they stand in the nursery rows.

Mr. D. C. Stranger, the general manager, is much more modest in his claims than would seem to be warranted by what he has to show; and the two Thurlow boys, Winthrop and George, impress one as determined to let their accomplishments speak for them. I have always found that there is most to be proud of on a place which is least boasted about by those in charge, and so it is at Cherry Hill. The visitor is amazed on his initial visit at the amount of stock which he finds spread out at his feet. Perhaps it is the fact that the nursery is located on a series of hills and in the valleys between them which makes it especially attractive. It is not possible to get a broad view of most nurseries without going up in an airship, but here one can stand on a hill top and look down upon acres of conifers, rhododendrons, azaleas and other nursery stock. The very name of the nursery suggests its rolling character, although most of the cherry trees themselves have long since perished.

What first attracts the attention of visitors is the series of hedges and wind breaks which surrounds many of the fields. As a matter of fact, people have come from long distances for the sole purpose of seeing these hedges, some of which are over fifty years old. If these hedges and wind breaks could be set end to end they would extend for over a mile, and at least one of them is sixty feet high. Two of the peony gardens are entirely enclosed by evergreen hedges, for which reason they develop very early in the season. A large block of rhododendrons have the same kind of protection. From the way in which these hedges and wind breaks grow it is obvious that the land is especially well adapted to the cultivation of conifers.

Apparently it is just as well suited for broad-leafed evergreens, too, for rhododendrons, kalmias and andromedas thrive with the greatest luxuriance. The blocks of kalmias at this nursery are undoubtedly the largest in New England, and there are few nurseries, if any, where a greater number of rhododendrons can be found.

Visitors in the trade are sometimes surprised at the large plantings of andromedas here, but the fact is that the call for this handsome evergreen is increasing rapidly all through the country. Mr. Stranger and the Thurlow boys sensed this growing demand long before it became so evident and began to plan for it. What looked in a sense like plunging has turned out to have been simply an intelligent looking ahead.

Another plant for which the demand has increased very rapidly is Taxus cuspidata brevifolia. This also has been anticipated at Cherry Hill, where the largest stock in New England has been gathered together. The owners are now planning to meet the call for the upright form of the Japanese Yew, which is certain to come in a few years.

In this connection it is interesting to have the opinion of some expert growers on the much-discussed quarantine No. 37. I couldn't help asking Mr. Stranger what he thought of this embargo. His reply is illuminating.

"Quarantine 37," he said, "is going to be the biggest thing for horticultural interests and for American nurserymen that ever happened. It is going to interfere with the business of many nurserymen, no doubt, for the time being.

Fine Block of Young Maples

Ideal Location for Rhododendrons

It is going to cut the profits of nurserymen who have depended upon Europe for their stock. Likewise, it is going to make prices somewhat higher, but if we can look ahead ten years and visualize the situation as it will then exist, we can see that the interests of the trade and of the country itself will have been immeasurably benefited by shutting out these European products.

"After all," continued Mr. Stranger, "it is simply the repetition of an old story. Years ago we used to be told that Americans could not make machinery to compare with that which came from Europe. Now we not only make our own, but ship it abroad. It was the same way with bicycles and with other inventions. When we Americans are forced to use our own heads we can accomplish whatever we set out to do. Ten years from now, I believe, we will be growing far better nursery stock in America than we can possibly find abroad. Among the nurserymen who opposed this quarantine two years ago, there are very many, I am sure, who would now be loth to see it removed. They are taking advantage of it to build up a stock which will bring them in handsome profits in a few years."

Landscape architects as well as amateur gardeners are planting more evergreens each year. They want the winter effects that can be obtained only in this way. They are beginning to appreciate, too, the fact that stock large enough for immediate effects can be obtained without excessive cost. At the same time both landscape architects and the public are becoming more discriminating. They are unwilling to accept any kind of evergreen, but demand specimens which in shape, color and vigor match up to the highest standards.

That is a fact which was also sensed at Cherry Hill years ago. Competition in the future is to be measured by quality rather than price. The Cherry Hill Nursery is reaching out for buyers who want only the best. They are able to satisfy this kind of trade because they have been devoting themselves systematically to the production of stock which cannot be excelled. This fact was impressed upon me time and again. If there are finer specimens of hemlocks, Douglas spruces, red pines, Siberian, American, pyramidal arbonitaes, and red cedars to be found anywhere in the country, I have yet to see the place. There are plenty of these trees, too. In a single block of Douglas spruces there are eight hundred trees, six to eight feet high. There are magnificent specimens of hemlocks by the hundreds, and all the other evergreens for which there is a call in similar quantities.

I was greatly interested in one practice in vogue at this nursery because it is contrary to the usual rule. Here many of the evergreens, including the Douglas spruce and the red pines, have their leaders cut out. According to Winthrop Thurlow, experience at Cherry Hill has shown that this practice when intelligently done produces much bushier and handsomer trees than can be obtained by allowing the original leader to grow. The tree may be a little slower in making height, but is enough improved in appearance to atone for this fact.

With all their trees every effort is made to obtain a compact ball of roots which greatly facilitates transplanting and lessens the danger of a serious setback. One way in which this purpose is accomplished is to use fertilizers rather close to the trees instead of in the rows between them. Very little barnyard dressing is employed, but free use is made of pulverized sheep manure and bone meal. This, no doubt, is one explanation of the success which the Cherry Hill Nursery has in turning out evergreens with an unusually compact and vigorous root ball.

And lest it be assumed that there are only evergreens at Cherry Hill, let me mention in passing red flowering dogwoods, eight to fifteen feet high, which I saw by the hundreds, large blocks of maples, and various other deciduous trees. Also—and that fact should not be overlooked—there is a very extensive planting of Japanese iris.

The Cherry Hill Nursery was established in 1832 by the grandfather of the present Thurlow boys. As is to be expected in a nursery of this age, there are many very large specimens of trees. Wealthy visitors often covet these trees and are willing to pay long prices to obtain them. Not long ago $700 was offered for a magnificent Abies concolor standing in the yard adjoining the old Thurlow residence, but the offer was rejected. The tree is too much a part of the place to be parted with. Some months ago, however, a purple beech, weighing fourteen tons and requiring twelve horses to haul, was shipped all the way to Detroit. It was placed in a forty-foot box car and even then the top had to be doubled to make room for it. Along with this shipment went six other trees somewhat smaller in size. All are growing well and orders for other trees equally large have been received to be sent the same destination. An Abies concolor weighing twelve tons and measuring fifteen inches at the butt was delivered in good condition to a customer in Brookline. Very large trees have been shipped to Newport, Hartford, Springfield and other cities even more distant.

A Corner of the Exhibition Garden

And so this great nursery is serving its clients in many and varied ways, but always with the purpose to put quality above all else. Surely a worthy aim. E. I. F.

P. S. If you would be interested to have a Catalogue of the Cherry Hill Nurseries, one will be sent you promptly on request. And you will be welcomed as a visitor at any time, except on Sundays.
*Adv.*

Page and half page space, not consecutive, rates on application.

SUBSCRIPTION RATES:

One Year, in advance, $1.00; To Foreign Countries, $2.00; To Canada, $1.50.

Flowers are sent to do God's work in unrevealed paths, and to diffuse influence by channels that we hardly suspect.—*Henry Ward Beecher.*

**Convention Days** While there are arguments against the holding of a convention like that of the S. A. F. and O. H. in mid-August, yet experience has seemed to prove that no better time of year could be chosen. To be sure, there is likelihood of very hot weather but, on the other hand, a winter convention might mean equal discomfort through extremely cold weather, snow blockades and other difficulties. Moreover, the summer is always a season of comparative leisure in the florist business. Then, if ever, the man who grows flowers and the man who sells them has an opportunity to travel around the country, getting acquainted with his fellow workers and broadening his vision.

There is nothing like a convention to stimulate the thought processes of a good business man, and when a convention is held in a city like Washington, it gives an unusual opportunity for combining both business and pleasure. Washington is never better to look upon than at this season of the year and, truth to tell, it often is no hotter in mid-summer than New York, Philadelphia or Boston.

The plans which have been made for the present convention are very comprehensive and well thought out. The program covers many very important subjects, and in spite of the fact that Washington offers so many opportunities for sight seeing, those who attend the convention will make a mistake if they miss any of the business sessions or the lectures. As the program is arranged there will be plenty of time for both lines of activity.

From the interest in the convention reported from all parts of the country it is evident that the S. A. F. and O. H. is stronger than ever in the esteem of the florist trade. It is a unique organization in many ways, one which no man or woman connected in any way with the floral trade can afford to ignore. Without doubt much good will come from the society's convention at Washington, and it is a foregone conclusion that those who attend will return to their homes better citizens, as well as better florists, for having spent a few days in the Nation's capital and in associating with the leading minds in one of the best lines of business in which any man can engage.

**Glutted Markets** One problem which has vexed florists ever since the business assumed anything like its present proportions is that of the glutted market. On another page in this issue of Horticulture a florist advocates giving away surplus flowers with a generous hand. We wonder to what extent other members of the trade will agree with him. We know of no other line of business where it is a custom for producers or retailers to dispose of their goods without charge except, perhaps, in a very limited way, like the famous bargain basements which some of the department stores maintain. Still, it seems almost criminal to permit a waste of flowers which have the potential power to bring happiness and joy to hundreds of persons.

The question to be considered, and one which deserves very careful thought, concerns a method by which surplus flowers can be taken care of in such a way as to prevent an entire loss, and yet without cheapening their value. The solution of the problem lies undoubtedly in some form of advertising. It is well known that in almost all other lines of trade the dealers use printer's ink freely to move a stock of goods which has accumulated on their shelves. How far this principle can be applied to the florist trade is a problem. It is not a new problem, either, for it has long been discussed in most of the leading cities of the country. The difficulty experienced in most instances has been the getting together of all representatives of the trade. Almost invariably certain individuals or firms have held back for one reason or another, with the result that the whole program has been disarranged.

The most forward step so far reported is that taken by the Allied Florist Trade Association of New York, which is now working out a very comprehensive plan which, if it can be put through, will do away to a large extent with glutted markets. It is proposed to have advertisements appear in the local papers whenever there is a surplus of flowers of one kind or another. This is only one feature of the plan, however. With it will be linked up various measures by which each florist can help to make these advertisements pay

**Speeding Up** Thomas A. Edison said something the other day of far more interest to salesmen than his widely discussed List of Questions. It goes as follows:

> "I have been through five depressions during my business life. They all act alike. This latest one acts exactly like all the rest. The men, who, if business fell off 66 per cent, increased their selling effort 75 per cent, managed to pull through as if there was no depression, and the efforts of such men tend to shorten the periods of depression."

Imagine what would happen in the business world if every florist, every manager, every salesman should read the above message and *believe* it and start out to *sell* it!

What a fine Fall and Winter season it would make. Let us all go to it.

# "Montgomery's Priscilla"

That's the name of the new pink rose! The name will be "Priscilla" probably after the public has had it a while, but we have had to add the prefix to cover the rules of nomenclature.

In order to get someone who knows more about roses than we do to give an unbiased, honest opinion on the merits of this rose, we have placed 12 plants of it with each of the following rose growers:

E. G. HILL CO., Richmond, Ind.
DAILLEDOUZE BROS., Brooklyn, N. Y.
ALBERT H. AMLING CO., Maywood, Ill.
DUCKHAM-PIERSON CO., Madison, N. J.
ROWAYTON GREENHOUSES, Rowayton, Conn.
MILLER FLORAL CO., Farmington, Utah
WELLWORTH FARM GREENHOUSES, Downers Grove, Ill.
A. S. BURNS, JR., Spring Valley, N. Y.
ROBT. SIMPSON, Clifton, N. J.
CHAS. H. TOTTY CO., Madison, N. J.
NOE-RUZICKA CO., Madison, N. J.
WM. H. ELLIOTT CO., Madbury, N. H.
ANTHONY RUZICKA, Madison, N. J.
W. J. PILCHER, Kirkwood, Mo.
JOS. HEACOCK CO., Roeloffs, Pa.
WENDLAND & KEIMEL, Elmhurst, Ill.
JOY FLORAL CO., Nashville, Tenn.
ROBERTS ROSE CO., Denver, Colo.
GEO. C. WEILAND, Evanston, Ill.
LAKEVIEW ROSE GARDENS, Jamestown, N. Y.
BASSETT & WASHBURN, Hinsdale, Ill.
HARRY O. MAY, Summit, N. J.
F. R. PIERSON, Tarrytown, N. Y.
L. B. CODDINGTON, Murray Hill, N. J.
JOS. H. HILL CO., Richmond, Ind.
STEPHEN MORTENSEN, Southampton, Pa.

Ask them about it, if you will, at any time. They have our permission to tell the truth. We are going to let this rose sell itself! We shall be simply order takers.

A. N. PIERSON, Inc. Cromwell, Conn.

## THE SUMMER FLOWERING TREES.

Here in the north not many trees except Lindens can be grown which flower in summer. These are all valuable, however, for they add interest and variety to parks and gardens at the season when the flowers of trees and shrubs are not abundant. All the summer flowering trees here are interesting, and the flowers of some of them are conspicuous. After the Lindens the first of these trees to open its flowers is the Sorrel-tree (Oxydendrum arboreum). This tree is the only representative of a genus of the Heath Family and one of the few genera of eastern American trees which is not represented in eastern Asia.

The Sorrel-tree is a common tree of the forests of the Appalachian Mountains from southwestern Pennsylvania southward; it grows also but less abundantly from southern Ohio and Indiana to northern Florida, southern Alabama and Mississippi and in eastern Louisiana. Growing under the most favorable conditions the Oxydendrum is a tree from fifty to sixty feet high, with a tall straight trunk sometimes twenty inches in diameter. The leaves are dark green, very lustrous and seven or eight inches long, and the bright scarlet of their autumn color is not surpassed by that of any other American tree. The leaves are pleasantly acidulous, a character to which the tree owes its vernacular name.

The white flowers, which are shaped like those of an Andromeda, are erect on the branches of spreading or drooping clusters, and these are followed by pale capsular fruits which are conspicuous in contrast with the brilliant colors of the autumn foliage. Here in the north the Sorrel-tree begins to flower when only five or six feet high, and it is not probable that it will ever grow here to the size this tree attains in the rich "coves" found on the lower slopes of the high southern mountains in which several of the trees of eastern North America grow to their greatest size. The Arboretum Sorrel-trees are planted among the Laurels (Kalmia) at the northern base of Hemlock Hill, and during the last two weeks have been covered with flowers.

Koelreuteria paniculata. This Chinese tree, which has been in bloom during the last ten days, is when in flower the most conspicuous of all the summer flowering trees which are hardy in this climate. It is a round-headed tree rarely more than thirty feet high, with large, compound, dark green leaves and large erect clusters of golden yellow flowers which are followed by great clusters of bladder-like pale fruits. This tree, which is hardy in Massachusetts, has been a good deal planted in this country, especially in the gardens of the Middle States. The Koelreuteria often appears in American nursery catalogues under the name of "Japanese Lacquer-tree," although it is not a native of Japan and has not lacquer-producing sap.

A. L. MILLER, Jamaica, N. Y.

plantations with three handsome trees which flower in August. The most interesting of these three trees, possibly because it is still the least known in this country, is Acanthopanax ricinifolium, an inhabitant of the forests of Japan and Korea, where it sometimes grows to the height of seventy or eighty feet and forms a massive trunk and great wide-spreading branches armed, like the stems of young trees, with numerous stout prickles. To the shape of the leaves, which somewhat resemble those of the plant which produces the fruit from which castor oil is obtained, this Acanthropanax owes its specific name. The leaves, which are nearly circular and more or less deeply five- or seven-lobed, and fifteen or sixteen inches in diameter, hang on long slender stalks.

The small white flowers are arranged in compact, long-stemmed clusters which form a compound flat terminal panicle which varies from twelve to eighteen inches in diameter and is well raised above the leaves. In the early autumn the flowers are followed by small black and shining fruits.

Of the trees growing in the Arboretum this Acanthopanax most departs in appearance from the trees of New England; and no other tree here is regarded with more curiosity. The largest specimen is growing by the side of the pond on the right hand side of the Meadow Road near its junction with the Bussey Hill Road; there is another large specimen in the mixed border plantation in the rear of the group of Viburnums near the junction of the Bussey Hill and Valley Roads. These trees have not before been more thickly covered with clusters of flower buds.

Stewartia pseudo-camelia, another summer-flowering tree, was among the first plants to reach the United States direct from Japan, and before 1870 was distributed from the Parsons Nursery at Flushing, L. I. It produces its pure white, cup-shaped flowers, which resemble those of a single Camelia, in August; the autumn color of the leaves is dark bronze purple, distinct from that of any other plant in the Arboretum and handsome and interesting; the smooth pale gray bark which separates in large pale plates adds, too, to the interest of this tree. There are two specimens on the upper side of Azalea Path.

A handsome dwarf Conifer. Among a large number of seedlings of the Carolina Hemlock (Tsuga caroliniana) raised at the Arboretum from seeds planted in 1881 two individuals are dwarf in habit. The smaller of these plants is now only ten feet high with a spread of branches of twelve feet, and the other is thirteen feet high with a spread of fifteen feet. They show no tendency to form a leader, and look as if they would continue to grow more rapidly in breadth than in height. In their wide-spreading and gracefully drooping branches they are more beautiful even than the well-known weeping form of Tsuga canadensis, which has usually been considered the handsomest of dwarf conifers.—Arnold Arboretum Bulletin.

## CLEVELAND NATIONAL FLOWER SHOW

The various arrangements for the forthcoming National Flower Show are developing in a most satisfactory manner. James McLaughlin, chairman of the committee on special premiums, reports that his committee is making good headway in its work. The first premium received was one from H. G. Berning of St. Louis, $100 to be used in the discretion of the National Flower Show Committee. The M. Rice Co. of Philadelphia offers a store display piece of the wholesale value of $50; and Max Schling, New York, offers a series of gold, silver and bronze medals.

In addition to the exhibitors already reported as having reserved space in the Trade Section are the following:

Zane Pottery Co.,—South Zanesville, Ohio.

Ideal Power Lawn Mower Co.—Lansing, Mich.

Vaughan's Seed Store, New York and Chicago.

H. Bayersdorfer & 'Co.—Philadelphia, Pa.

The Bayersdorfer reservation covers a most liberal space, so the firm may be expected to stage a most comprehensive exhibit.

JOHN YOUNG, Secretary.

## THE AD AND THE MAN.

He saw an ad from day to day
And muttered: I defy them;
Their flowers may be just what they say
But I'm not going to buy them.

As time wore on he made remarks
It would not do to mention,
For he was mad because that ad
Was forced on his attention.

But in a week, or two, or three,
He said: 'There's no denying
The way that ad gets hold of me—
The flowers may be worth trying.

For just about a fortnight more
He dared mere words to win him,
And then the ad completely had
Aroused the spender in him.

Next day he went into a store
And quietly expended
A few big iron dollars for
The flowers the ad commended.

He found they filled a long-felt need;
Their excellence surprised him.
And now he's glad because the ad
So deftly hypnotized him.

### THE GLADIOLUS

The garden is resting; the bloom even of early July with late roses, sweet williams and larkspurs has gone, when the gladiolus come with their riot of color, from the soft yellows and terra cottas of the primulinus varieties to the dark purple of the Baron Hulot and the beautiful pink and red of the Mrs. Francis King.

This year, among some wild bulbs sent to us from Muldersvlei, South Africa, were some exquisite white gladioli which resemble the Colvillei variety, which includes the Bride. They were smaller than the hybrids of our gardens, very dainty and choice.

At Hillcrest we have succeeded well with our gladioli. We plant them about the tenth of April, eight inches deep in the ground. This deep planting keeps them erect when they blossom so that we need no unsightly stakes for their support. We keep a few bulbs to set in the ground where any fail to come up so that by the time they blossom we have an even row.

At Hillcrest our garden is planted for effects. In the early spring our wood road is beautiful with hepaticas, crocuses and narcissi. Then come many varieties of primroses, especially the Japanese, with its whorl of crimson, white or yellow blossoms. As June advances we have the lupines, pyrethrums, larkspurs, Canterbury bells and veronica, each in sufficient mass to make an effect. Early in July our garden was a blaze of color, but before the gladiolus blossomed it grew green.

That garden enthusiasts may grow the gladiolus to perfection, Mr. H. E. Meader of Dover, N. H., is to give a free lecture on the cultivation of the gladiolus at Horticultural Hall, Boston, on Saturday and Sunday, August 13 and 14, at three o'clock in the afternoon. At this exhibition the New England Gladiolus Society is to join with the Massachusetts Horticultural Society in showing many beautiful blossoms.

M. R. CASE.

Hillcrest Gardens, Weston.
July 26, 1921.

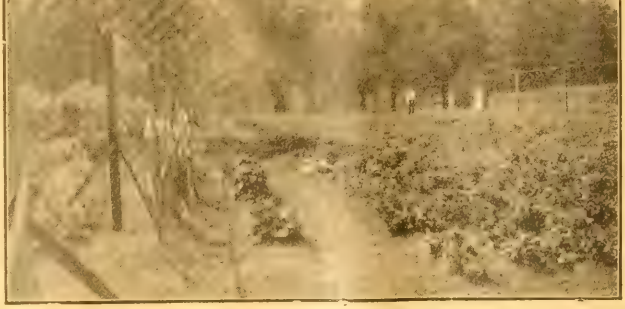
### PANSY GROWING IN OREGON.

Pansy growing is proving a profitable industry in Oregon. Steele's Pansy Gardens at Portland are known the country over and the Steele seeds go everywhere. Another grower is Col. Wm. A. Aird of Oregon City.

"The market for seed is the world," says Colonel Aird. "And we receive orders from Australia to India. Plants are shipped from California to Missouri, as well as supplying the local market."

Colonel Aird gives a great deal of the credit for the success of his planting to the Skinner system of irrigation. He says: "The photograph was taken last July. A little before that we had three days in succession of hot, dry winds, which would have completely ruined our seed crop but for the Skinner system. We turn the sprinkler system loose and the Pansies smile up at us for the cooling showers."

An ounce of seed will grow from 700 to 1,000 plants.



The average yield per acre is from 75 to 100 pounds of seed. This seed is worth $1.28 per pound, wholesale, and a great part of it is shipped east.

The plants are kept just one year and then are plowed under.

### MEET WITH ROBT. PYLE

Over a thousand persons were present at a meeting of the Chester County (Pa.) Automobile Club, which was held at "Rose Hill House," the home of Robert Pyle, president of the American Rose Society, while several hundred cars covered several acres of space in the field adjoining.

President A. P. Irwin acted as chairman, introducing first the host who warmly welcomed all to his home, and pledged his support to the organization.

The next speaker was Dr. W. P. Finney, of Lincoln University, who spoke on the benefits of good roads to that institution and told of the Memorial Arch, erected along Route 131, at which the President of the United States had seen fit to pause for a brief speech.

The main speaker of the evening was J. Horace McFarland, of Harrisburg, President of the National Civic Society, and one of the foremost exponents of a nation beautiful.

His speech, "What About the Country Highway," dwelt not upon the mechanical construction of the roads, but their appearances. He dwelt strongly upon the need of legislation preventing the heavier truck traffic that is a veritable competition with rail freights, that is ruinous to the roadway and makes the roads distasteful to travel. He spoke of the combined usefulness and attractiveness of planting the banks with trees or vines instead of allowing them to grow in underbrush and rubbish. Mr. McFarland described in glowing language the highways of his dream that he believed would eventually come true, and he backed up his plan for the need of proper pointer boards by telling that he had gotten lost at Cochranville on his way.

### BOSTON NOTES

Mr. S. Robinson of the Boston Floral Supply & Snyder Company says that there is no truth in the report that he has left the concern to enter the bond business. He also says that the factory has not been closed and that business has been remarkably good all the season. As a matter of fact this company would like to find larger quarters in order to extend its business.

C. H. Tilton, the Everett florist, has closed his place of business during the month of August.

Miss Florence E. Palmer, daughter of F. E. Palmer, the well known florist of Brookline, was married August 3rd to Mr Dean Peabody, Jr., of Reading, Mass. The wedding took place in the Palmer home and the young couple left for a honeymoon trip motoring through New Hampshire.

Henry M. Robinson is spending his vacation at his country home in Green Harbor, Mass.

Frank Edgar of Waverley is to construct a new Lord & Burnham greenhouse of 200 ft. by 24 ft. The house will be divided into two sections with continuous ventilation on top and sides.

At the coming Gladiolus show at Horticultural Hall, August 13th and 14th, Mr. H. E. Meader of Dover, N. H., President of the American Gladiolus Society, will give a lecture each afternoon at 3 o'clock. The second annual exhibit of the New England Gladiolus Society will be held in connection with this show.

Another new flower store is to be opened in Back Bay about September first. The proprietor will be J. B. Fitzgerald, formerly with Thomas D. Clark and later with the Henry M. Robinson Co. The location which he has chosen is 23 Huntington avenue,

## IGNORANT "EXPERTS."

### Gardenmen's Association Taking Measures to Curb their Activities.

The members of the National Association of Gardeners, who occupy the positions of superintendents and gardeners on the country estates located in Nassau County, Long Island, met at the Nassau County Club House, Glen Cove, Thursday afternoon, July 28, and organized as the Nassau County branch of the national association.

It was explained at the meeting by M. C. Ebel, Secretary of the National Association of Gardeners, that the purpose for establishing this branch is to create greater co-operation on the part of the local members of the national association, to protect their interests and those of their employers against the encroachments of the so-called "experts," who offer their services, ranging from an "advisory capacity" to that of "non-resident supervising manager" of an estate.

He stated that it has been his experience that most of these so-called "experts" possess a very limited knowledge of horticulture, their learning being confined to one or two phases of it, and that primarily theoretical, but this does not deter some of them from assuming complete control over an estate if the opportunity comes to them, sometimes superseding a superintendent who has forgotten more than the "expert" ever learned about gardening. This, of course, is humiliating to a gardener who has conscientiously, and apparently satisfactorily to his employer, performed the duties of his position up to the time the "expert" made his appearance. The circumstance is not in any way mitigated when the "expert" places a man on the estate whose record is a failure wherever he has been directly engaged as a gardener, to instruct the gardener in charge what to do, and supervise the work, because the "expert" himself does not happen to possess the ability to give the instructions. Nevertheless he accepts a fee on the pretense that he is thoroughly qualified to direct and su-

Telephone No. 755 Farragut NEW YORK

pervise what he has undertaken to do.

Mr. Ebel further remarked that no sensible gardener would hesitate to co-operate with a reputable landscape architect in the developing or maintenance of an estate, and that one seldom hears of a member of that branch of the profession attempting to force a superintendent or gardener out of a position in order to install himself. He blamed the gardeners for the foot-hold some of these "experts" have secured and urged that the gardeners endeavor to gain more confidence among their employers so that the employer will consult more freely with them and rely on them in the upkeep of their estates.

A general discussion ensued which was participated in by James Duthie, John F. Johnston, Alexander Michie, Thomas Twigg, John R. McCulloch, Alfred H. Walker and others. It was the unanimous sense of those present that some action should be taken to acquaint the estate owners with the practice of some of the so-called "experts" who do not hesitate to resort to unscrupulous methods to establish a prestige.

Publicity was decided the best means to bring to the attention of their employers what the members are striving to accomplish to raise the standard of the profession.

J. W. Everitt of Glen Cove was elected chairman, and John R. McCulloch of Oyster Bay, secretary of the branch. Regular meetings will be held quarterly with special meetings at the call of the chairman whenever occasion arises to bring the members together.

**We Want More Shippers**
We have a numerous clientage of New York City buyers and the demand exceeds our supply. This is especially true of Roses. We have every facility and abundant room and best returns are assured for stock consigned to us.

# NURSERYMEN GO A-VISITING

## No Lack of Rhododendrons and Hardy Azaleas Found in Massachusetts Nurseries

It is evident that there will be no lack of rhododendrons and hardy azaleas in years to come, notwithstanding quarantine No. 37. That fact was made plain at the field day of the Massachusetts Nurserymen's Association last Tuesday. A visit was made to three nurseries in the vicinity of Framingham, and broad leafed evergreens found to be growing in great quantities.

The start was made from Horticultural Hall in Boston at 10 o'clock. The first place visited was the Eastern Nurseries in Holliston. This is the establishment founded by the late Jackson Dawson, of the Arnold Arboretum, and is now in charge of Mr. Dawson's son and daughter, Harry Dawson and Laura Dawson. Although it has been difficult to keep the place up for several years, owing to lack of help, this nursery is now in a very good condition. As might be expected, it contains a number of plants not to be found in the average nursery. A collection of Sedums proved especially interesting.

What most impresses the visitors, however, was a heavy planting of native rhododendrons in a clearing in the woods. Probably there are five acres of these plants. All of them were collected and heavily cut back when they were set out. Some of them are now large plants, and all are very thrifty. There are two greenhouses here where much propagating of evergreens is being done.

The party next visited the two nurseries of the Little Tree Farms in Framingham. Mr. Theodore M. Borst and brother are especially enthusiastic over the second farm, established a few years ago, which is being developed largely for retail business. There is a general planting of evergreens, all very well cared for. At the new farm Mr. Borst has a packing and shipping house which excited the admiration of all who saw it. It is really an immense barn which was acquired in connection with a large estate recently purchased.

"It was this barn," said Mr. Borst to his visitors, "which sold me the place. There is a basement under the entire structure which is ideal for nursery purposes. The great house which was on the estate probably will be rented, perhaps for an automobile hotel, while the barn and land, which covers many acres, will be used for nnrsery purposes."

Mr. Borst is very much in favor of quarantine No. 37, and made his reasons plain. "It is impossible in many instances," he said, "to get the right kind of stock for the eastern states from Europe. Take for example the spruce. European growers want and buy seed from the Pacific coast, which gives stock best adapted to European conditions. This, however, is not the kind of stock which thrives in the eastern part of the United States. The kind which we need should be grown from the seed collected in the Rocky Mountains; and the way to get this kind of stock is to grow it ourselves. Nurserymen were loth to do this when home grown stock had to be sold in competition with that which came from across the water. Now they can go ahead confidently, and as a result a very much better class of trees for American planting will be sold to the American public."

From Little Tree Farms the automobiles proceeded to the famous Framingham Nurseries, of which Richard

Wyman is the proprietor. It was past noon when this establishment was reached, and 'Dick" Wyman, with his estimable wife, were ready to satisfy the hunger of their guests, having provided ample supplies of salads, ice cream and other refreshments. which were greatly enjoyed.

The Framingham Nurseries have long enjoyed a reputation for sending out stock of the highest quality, and a long tramp over the extensive fields revealed the reason. All the stock is very carefully grown under the eyes of experts, with the result that there are many thousands of specimen plants, evergreens being especially conspicuous. Much favorable comment was aroused by a big block of Taxus in different forms. Mr. Wyman has great faith in the future of these yews

Perhaps the feature of Mr. Wyman's work which impressed the visitors to the greatest degree was the propagation of new plants. Special attention is being given to azaleas and other rhododendrons, including a nice lot of Azalea poukhanense, which was introduced from Korea some years ago Mr. Wyman has a considerable stock of seedling rhododendrons which he is growing for color. He also has a planting of self-fertilized hybrids, the blossoms having been protected until the seed had formed. A very good proportion of stock true to name is expected to be obtained in this way.

Mr. Wyman is looking ahead to the future, and believes that it is worth while to work up a good stock of some of the newer things which have been introduced through the Arnold Arboretum and other agencies.

Another trip of inspection is to be made by the Massachusetts Nurserymen's Association the last of August when the Cherry Hill Nurseries, at West Newbury, and Harlan P. Kelsey's nurseries at Boxford will be visited.

### HANDLING CUT GLADIOLI

Blooming the spikes in the shade modifies the field colors, from bright shades and tints to delicate flushes and shadings, and also reduces the latter to the faintest tinges of color or white. This is well known to experienced growers. In case of hybrids, producing intense and deep shades of violet, purple, crimson and scarlet, as well as yellows and other bright colors, it is desirable that these brilliant combinations be preserved when the spikes are cut for decorative purposes. To insure this result, place the vases of highly colored tpes in the early morning sun for an hour or two daily, preferably after renovation and renewal of water.

# LILY WHITE

The finest early pure white gladiolus in the world. Awarded first prize in white class, Boston, 1920. Vigorous, healthy, a great multiplier, and the earliest to bloom.

Write for descriptive list.

## H. E. MEADER

Gladiolus Specialist DOVER, N. H.

As it takes about three days after cutting to brings the spikes into strong blooming condition, this should be allowed for in advance of the date of intended use. The spikes can be shipped a thousand miles by standing them on end in suitable baskets or boxes. On arrival, cut off the end of the stalk, and remove the terminal buds before placing in water. They will then revive quickly and with proper care give pleasure for a week or more.

One of the causes of the popularity of the gladiolus as a decorative flower is the fact that it has no perfume. There are few flowers used for decorative purposes that are not distasteful to some one particularly in closed rooms, either from personal preference or painful association. When the pollen proves irritating to the tissues of the respiratory organs, as in the case of hay fever subjects, the anthers may easily be pinched out during the daily renovation, when the faded florets are also removed. This removal of the anthers is desirable in the highly colored types referred to, where the shed pollen dulls the brilliancy of the petals on which it may fall.

Note that **all** purlins are angle iron, screwed **directly** to each roof bar. Also that all column fittings are bolted through and through the columns.

# Alban Harvey & Sons, Makers of History Among History Makers

Seems like I never go to see The Harveys that they don't tell of some new and strikingly interesting bit of history concerning the Revolutionary battle of Brandywine, which was fought mainly on their property.

The longer I live, the more convincing is the thought that our surroundings have a tremendous effect on our lives.

To live right in the midst of the scene of that battle; and directly on ground hallowed by the blood of those sturdy unfaltering patriots; is surely reflected in the character and accomplishments of The Harveys.

They have ever stood for high ideals; but have never been content to simply *stand* for them.

Their ideals *are* their lives.

They *live* them, and do business *with* and *by* them.

They are fighters for freedom from everything that is not square and fair, right down to the last detail.

They are just as surely making history as those patriots led by Washington and counseled by Lafayette.

As they have lived, they have built; sturdily and soundly.

### GERMAN BASKETS COMING IN

**Seventy-five Cases Received by the Henry Robinson Co., of Boston**

German made baskets for florists' use are beginning to arrive in this country. One of the largest shipments has just been received by the H. M. Robinson Co., of Boston. It consists of seventy-five cases and includes baskets in great variety. Mr. Charles Robinson, of the firm, said that the baskets were fully equal in quality to those which were obtained during the war. They come to the Robinson factory in natural colors and are there stained to meet the demands of the trade. Said Mr. Robinson:

"It is impossible to say what the future of this basket business will be. Everything depends upon what Congress does in regard to the tariff and rates of exchange. At present these baskets can be imported for considerably less than they can be manufactured in this country. As a result we can sell them for less than domestic baskets. We are not going to continue making baskets except along special lines when we can buy them cheaper abroad. It may be, though, that a high tariff will be placed upon foreign baskets so that they can be made as cheaply here. The value which the government will place on German money is also an important matter. At present the German mark is worth a cent and a half, but if an arbitrary value of four cents should be placed upon it, it would greatly increase the price of German made baskets in this country in addition to whatever tariff might be imposed."

Mr. Robinson says that it will be impossible to issue a catalogue until the status of imported baskets is finally decided because prices might change almost overnight. The present shipment, however, will be disposed of at very reasonable prices compared with what have been charged in the past. Even if the business of making baskets is cut down, the Robinson factory will still be continued, probably being devoted to the making of boxes.

### CONNECTICUT NURSERYMEN'S ASSOCIATION

A pleasant day, good eats and the largest crowd that ever atended a summer outing of the Connecticut Nurserymen's Association combined to make Thursday, August 18th, a memorable one in the annals of this organization.

The entertainment committee composed of Paul Hubbard and Walter Campbell made an effort to secure the use of the new State park at Madison. Lack of facilities at that place made it necessary to fall back on the old reliable place, Lake Compounce, at Bristol.

So, with few exceptions, every nurseryman with his family hitched up "old tin Lizzie" and hied himself over to Compounce where Messrs. Pierce and Norton did themselves justice with an old time sheep bake.

Of special interest on the program of sports was the ball game between two teams captained by President Gottschalk and Secretary Rippin. Rippin could not get his spit-ball working with the result that Gottschalk's team walked off with the game. However, it was hinted that the umpire might have been "fixed" as it was noticed that SHE was taking in all the attractions after the game and spending money like a "drunken sailor."

At a short business session it was decided to hold the annual winter meeting at New Haven. The "pep" instilled into the organization by its present officers is sure to reflect itself once more, by a record-breaking winter attendance.

Vol. XXXIV AUGUST 25, 1921 No. 4

## THE TALK OF THE TRADE

The first of the shipments of bulbs are in. Dutch Golden Spur of excellent quality are of as much importance as anything on the list. The French stock includes Paper Whites, of course, Soliel D'Or, French Trumpets and French Romans. The situation on Paper Whites has not changed materially. It is true that the supply is not quite up to what was expected, with the price in consequence so high that flowers will be called upon to bring a top notch price or the growers will get but little margin. The other lines, however, have a fair chance of turning a reasonable profit to the grower. Bermuda Harrisi have been in for some time, and are of good quality. In fact, better than I have ever seen them. Considering the fact that there is practically no cold storage Giganteum stock around, the Bermuda bulbs are very welcome, and will fill in fine shape.

From my observation I believe that there is a larger planting of Godfrey callas this year than ever before. For some years past the growers of this stock, not only for local trade but for the wholesale market, have realized good returns. And from year to year the size of the bulbs has increased, and now we find bulbs being planted equal in size to the old standby, Calla Aethiopica, and it is also true that many growers have been able to get Godfrey flowers practically as large as the Aethiopica. In fact, they are totally as large as the market has any use for.

A trip across the northern part of Connecticut found the growers in good shape in every way, except that some were late with their carnations and decidedly short of stock. This, of course, as I have mentioned before, is a condition which prevails through New England in general.

Mum stock of these florists I found in fine shape. At Amden's Greenhouses, Putnam, Conn., there were several houses of very fine Bonnafon, strong heavy growth and full of promise for top notch flowers in season. Fortunately Bonnafon has been gradually developing a trait of starting in to flower along the first part of November and continuing pretty well through Thanksgiving and on to the early part of December. After the mid season yellows are out of the way there is hardly a yellow Mum that will take the place of Bonnafon

At Mr. Judd's greenhouses in Danbury, I found Golden Glow done equally as well. In a general way I find that this variety is not giving satisfaction with the growers, but Mr. Judd has them in top notch form. The foliage carried particularly good color for this time of year, the plants stood easily two and a half feet high, and they were as green and even a lot of plants as anyone could wish to find. He evidently had perfectly healthy stock and has shown the wisdom of carefully selecting his stock plants for propagating.

It isn't often that I run across a lot of double violets, at least in such quantity as I found at W. W. Thompson Co's, West Hartford. Their stock is very clean. All the plants are housed and give promise of a successful crop for this season. An experiment which I think will be particularly interesting for this year is a bed of the double violet Marie Louise, which are being carried over from last year's stock. At the present time they are in perfect condition, and unless some unusual complication arises in the way of weather conditions, I can see no reason why they should not carry through and give good results. It is an experiment and takes nerve to try it out, but, from what one can see now, I think Thompson Bros. are justified in making the attempt.

Saxe & Floto, in Waterbury, have their houses in good shape and have in the field quite a large block of particularly find Cleveland Cherries. The particular point of value is that they are not too large. They are well shaped, short, stocky plants that will just about fit into a 4½-inch or a 5-inch pot, and are heavily berried, with the berries showing well on top of the foliage. Cleveland Cherry isn't ordinarily a hard crop to handle. Most anyone can get them in the field pretty well berried in large sizes, but it isn't the easiest thing in the world to finish up a good plant in small and medium sizes, and that is where I think this lot is particularly good.

Field-grown carnation plants continue scarce, with practically no Morning Glow, Pink Delight or Benora available through New England, and all other standard commercial sorts

Laddie as Grown and Shown in England

are in only moderate supply, with a lot here today and taken up tomorrow There is nothing steady about the supply. It is to be regretted that there is no more stock of Morning Glow.

California grown bulbs of Iris are arriving. In fact, lots of Tingitiana and Filifolia have been delivered in the past week or two, and it is very pleasing to the growers that the size and quality of the bulbs is so good. I hope that the flowering results will be satisfactory because there seems good reason to look forward now to Iris and baby gladioli grown in California for the American market each season.

There has been more or less discussion as well as experimenting along the idea of carrying over carnation plants not only two years but more, and I have had occasion lately to see just how some of the carried-over stock is doing at this time. It's true that 't is very early in the year to attempt to form any opinion as to what the results will be, but it will be interesting to any carnation grower to know how they are starting out. Of course one can find plants of Laddie most anywhere which are being carried on. Some have been lifted, cut back and replanted in new soil, and others have been left in the same bed where they were growing last year and being carried on in that way. For rooted cutting purposes I believe that they are going to give satisfaction. I can see no reason why they should not, and I have seen some lots of Laddie which appear to be coming along with good promise as to flowering results.

I think the very best lot of carried over plants I have seen was two benches of Rosette which Mr. A. A. Pembroke, of Beverly, Mass., has in his large carnation house. They were as clean as any new stock could be. To have his plants in such condition, of course, called for careful attention. There is no spider on them, and this variety is carrying right now that same beautiful rich green sheen on the foliage that can be seen in the winter. I can see no possible reason why he cannot expect good flowering plants from these two benches of Rosette this winter. Mr. Amden, of Putnam, has a lot of carried over plants which he is undecided about. They may be left in, or they may be moved out, according to how they look when he gets finished with his other planting. But it is very certain that there is a lot of experimenting going on in this way, and my prediction is that we will find that some of our varieties will do well with that treatment.

Samuel S. Pennock, the New President of the S. A. F.

I am not surprised at all that the florists are pretty much discouraged with the results from their asters. Field after field of them are practically a total loss. I have heard it said that if asters are planted in new ground, there is good chance of eliminating the disease or trouble, whatever it is, but I know of several cases where a lot was grown on old soil and another lot right near to it on new sod ground freshly turned over this season and handled with all the care that was possible, and I could not see any difference at all. I wish it were possible to get down to the real cause of this trouble and some chance of avoiding it.

To tell the truth, about the only real good piece of aster plants that I have seen in a month's time, ranging from pretty well north in New Hampshire and Vermont, all the way through New England, pretty well in towards New York City, is a lot Harold A. Ryan, Inc., of Cambridge, has on old ground. I asked him how he had avoided the trouble, and he didn't seem to know that he had done anything but that he kept the stock growing from the time they were seedlings up to the time of flowering. I am now sure, however, that that is the answer. But it is positive that he has some very fine stock.

It has been one of the curious features of the business the past year that many florists have had an increase in trade. This has been the case with Samuel Murray, of Kansas City, who feels very well pleased with the showing made during the past season, in spite of the fact that there has been quite a reduction in prices. Mr. Murray says that he never has had a better stock to do business with, and probably the high quality of the goods which he always carries, and which everybody knows he has, is one reason for his success. He has been especially pleased with plant stock, including Cloxinias, Hydrangeas, Auratum and Rubrum lilies, and Begonia melior.

# Echoes of the S. A .F. Convention

Every detail of the 37th annual convention of the Society of American Florists at Washington last week went through smoothly and much feeling of satisfaction is expressed in what was accomplished. The election of officers was unanimous, and resulted as follows:

President, Samuel S. Pennock of Philadelphia.

Vice-president, Samuel Murray of Kansas City, Mo.

Secretary, John Young of New York City.

Treasurer, J. J. Hess of Omaha, Neb.

Directors: Wallace R. Pierson, Cromwell, Conn. Fred L. Atkins, Rutherford, N. J.

It was voted to hold the convention next year in Kansas City, Mo. The convention was opened by William F. Gude, owing to the absence through illness of his brother, Vice-president Adolph Gude.

## PRES. PENNOCK ACCEPTS

On his return from the Washington convention, Secretary Young received the following radiogram from President-elect S. S. Pennock, in reply to a cable message notifying him of his election:

"Essen: To John Young, 43 West 18th St., New York. My warmest appreciation of the confidence and honor tendered me. Best wishes to every one. S. S. Pennock."

## IMPORTANT RECOMMENDATIONS MADE.

### Address of President Roland a Noteworthy Effort

It was generally conceded that the address of President Thomas Roland, of Nahant, Mass., was one of the most comprehensive and important ever made at a convention of the S. A. F. It was especially valuable for the recommendations which it contained, showing deep study of the Society's needs and the best ways to meet them. Among the salient points in President Roland's address were the following:

It seems to me the future of Horticulture never looked brighter. Industry in general is very much upset, because of the backwash of the great war, and faces the future with uncertainty. Flowers, however, are a ministry, a solace and a pleasure—and in all these there are many phases of real abiding strength and comfort. For these reasons Horticulture may expect to be ever increasing, for it may be economical or expensive, ornamental or partly useful, and, therefore, it fits life under all conditions, in a way that perhaps may not be matched in another industry. Love for our profession is increasing rapidly, and this also makes our future satisfactory in outlook.

At the January meeting, in Washington, of your Board of Directors, it was voted, after very careful consideration, to discontinue the publication of the Society's Journal, and to issue an annual report. I hope the time may come soon when the Society's work will have the size and importance to justify a monthly journal. Such a publication would stimulate and sustain a keener interest in our activities. In the meantime I hope the Society will publish an annual brimful of such information that every member will feel he could not be without it as a book of reference. Such a book would be well worth more than the annual dues; and such a book is already achieved by one of our associated organizations dealing with roses.

I believe every one will agree with me in claiming that the Society has in its ex-presidents a group of men whose combined experience and devotion to our organization needs no proof and no trial—for each has already shown his value to us in his individual capacity as the head of our large Society. Here, in their experience and ability, is a so far untouched mine of skill. Let us tap it by establishing an Advisory Council composed of our ex-presidents. My suggestion is that this council would be set up only to consider definite and specific questions referred to it by the Board of Directors; and it would report their advice to the Board of Directors, who would use it as they chose in their own deliberations. In this way we would get the benefit of a deliberative body of great value to us.

I am very much in favor of a field worker—an efficient man spending all of his time going over the country, lecturing before local horticultural organizations, explaining what our great Society stands for and what it is doing and aiming to do for Horticulture in our country. I believe there can be no better way to add new members and to create new interest in our work and our organization.

I believe our Society can do no better work than to assist in planning and suggesting plans for making more and better use of what we have in scientific education in our profession, and for further improving it wherever it may be done. We should also encourage and assist young men to take this training in Horticulture—even providing scholarships.

We now have a fund of $50,000 which we consider a permanent fund. There is, however, nothing in the by-laws to this effect, and it is certainly wise to amend the by-laws so that there shall be a permanent fund and so that the principal of this fund shall not be used, but only the income.

The city of Cleveland is building a fine auditorium which it is intended to open formally with the great fifth national show. The exhibition building will be by far the finest and most suitable of any we have ever used for our purpose. It is a heavy undertaking, involving an expense of around $70,000.00, and the cost would be even greater were it not for the

REMINGTON, INDIANA

painstaking work, and for the time and energy, all so freely given by the committees chosen to serve you. It remains for those not on committees to show both interest and appreciation, both of their fellow members and of our exhibitions, by whole hearted help which alone can make this coming show the greatest horticultural event ever held anywhere at any time.

There is a campaign under way to double our membership before January first next. I feel this would be an easy thing to do if commercial horticulturalists of all sorts realized that our industry needs to be fully organized in order to keep the pace set by other industries. Our membership must be heavily enlarged if we are to carry on in a satisfactory manner, and to begin to fulfill some of our high aims for the future, and to do the great work we are expected to undertake.

Remember also our trade exhibits—got up by men and companies who work not alone for money profit; though this they naturally expect, and from us whom they serve so well; but who are also imbued with a love for their work which often makes them give more than they get. You will agree with me that these people who exhibit with us are entitled to our patronage, both because of real deserts and because their efforts are a strong help to us.

## REPORT OF HENRY PENN

The report of Henry Penn, chairman of the Publicity Committee, was heard with much interest. Among the points brought out by Mr. Penn were the following:

"We are waiting for a fund to start our fall campaign and your committee realizes the necessity of having the means in the Treasurer's hands before making any expenditures, and as soon as conditions warrant we will again start our magazine publications.

"One of the biggest things in advertising is good-will and ours has been of a character to help build this spirit. We have raised our standard of flowers in the effort, and harnessed together we have an asset that will move onward and upward. Never in the history of flowers have so many branches of our business benefitted as since the advent of advertising three or four years ago, and surely the desire to further this course will be most acceptable to all of us.

"Our publicity committee has visions of a well defined program, merely being hampered by not having the funds on hand. Would it not be a good thing for florists running local campaigns to see to it that twenty-five per cent of their appropriations be transmitted to the national fund just to show their interest in their own campaign.

"The success of our slogan is international and unless we keep it up nationally other lines will make such inroads upon it as to undermine our good work so well started.

"The following years are going to be years where problems of salesmanship and advertising are going to be more important than ever, owing to the transition stages through which

Samuel Murray
The New Vice-President
of the S. A. F.

we are passing, and we must bend all our energy to keep flowers in the home and before the public at all times in the printed word as well as in the floral sense. To do this we must cultivate new buyers by inspiring confidence and sentiment and with the assistance of our national publicity campaign backed up with local advertising we will be enabled to cope with the problem from a broad viewpoint and thereby help florists generally from all parts of the continent."

## LIST OF PRIZES DISTRIBUTED

The list of prizes for the various sports was as follows:

Washington Florists' Club, cash prize, $50.00

Wm. H. Ernest, Capt. Bowling Team, cash prize, $25.00

H. Bayersdorfer & Co., ladies' sewing basket

Schloss Bros. Ribbons, Inc., electric percolator

Bobbink & Atkins, $10 gold piece

Zane Pottery Co., Harding blue vase

Lord & Burnham, nickle smoking stand

M. Rice & Co., plant bowl on stand

Roman J. Irwin, cut glass bowl

American Greenhouse Mfg. Co., gentleman's umbrella

Wertheimer Bros., Roman stripe silk sash

Burlington Willow Ware Shops, refrigerator basket

Henry A. Dreer, Inc., case of knives and pruning shears

A. L. Randall & Co., auto refrigerator

Whillden Pottery Co., $10 gold piece

American Bulb Co., I. Rosnosky, Thermos bottle

F. H. Kramer, tea tray and bowl

Duro Paper Box Co., silver cup

Henry I. Faust, silver cup

J. C. Vaughan & Co., tool kit

W. F. Roberts, fishing reel

A. G. Spalding & Bro., golf club

Z. D. Blackistone, 5 lb. box candy

## CANADIAN FLORISTS' AND GARDENERS' ASSOCIATION

At the 24th annual convention of the Canadian Florists' and Gardeners' Association, held at Peterboro, Ont., August 8, 9 and 10, the old board of officers was elected as follows: President, W. E. Groves, Hamilton; first vice-president, C. J. Hay, Brockville; second vice-president, Fred D. Clark, Toronto; secretary-treasurer, Herbert J. Eddy, Montreal. Three new members of the Executive Committee were elected, the new executives being now as follows: Three years, H. E. Groves, Hamilton; R. Burrows, St. Anne de Bellevue, Que.; S. Kirk, Georgetown, Ont.; two years, W. H. Gray, Dundas; Alexander Simpson, Toronto; A. M. Terrill, Calgary; one year, W. C. Hall, Montreal; S. Jordan, Peterborough; S. A. McFadden, Toronto.

It was voted to hold the next convention in Montreal.

## GLADIOLUS SHOW AT MANSFIELD

It is seldom that a small city can put up as fine a gladiolus show as that held at Mansfield, Mass., August 17 and 18. As it happens this city has an unusually large number of gladiolus growers, both commercial and amateurs, and the competition between them is very keen. There were fifty-five classes, almost every one of which was filled. Mr. F. O. Shepardson was the most successful exhibitor, securing sixteen firsts. A feature of the show which attracted much attention was a very handsome bridal outfit made up of gladioli by Mrs. W. E. Chase.

# American Carnations As Seen Through English Eyes

It is always interesting to get the other man's point of view, especially if the other man knows what he is talking about. For that reason the report of the carnation show held at Washington as it appears in the Year Book of the British Carnation Society for 1921, just issued, is well worth reading. It was written by Mr. T. A. Weston and reads as follows:

"Regarding the exhibition, it may be truly said that no actual comparison can be made between the American and British carnation shows. The American exhibition is purely a trade show, no effort being made to make it decorative. The flowers are all set up—no, rather dumped into straight pulp ware vases, either in 50's or in 100's. Cut to an almost even length, the stems are held level until the entire number is got in hand and then dropped into the vase. As a result, the flowers are more or less at an even height, lacking any semblance of decorativeness. Standing in single rows along the tables, the effect is not impressive; moreover, as all the classes are for single vases, there is no intermingling of colours as is seen when classes of six or twelve varieties are staged.

"The quality of the flowers shown at Washington was decidedly good, but in no way superior to the competitive blooms staged in London. Indeed, considering the fact that the British growers show in December and lack the sunshine that prevails here during the Winter, I am not so sure but that the British growers will, when the trans-atlantic air service permits International cut flower shows, shake up some of the 'boys' here, especially when it comes to making variety displays.

"Fancy colours are almost non-existent. At Washington, pink flakes on white and the yellow Maine Sunshine were the only departures from the regular deep and light pinks, white, scarlet and crimson. The latter colour was poorly represented.

"Laddie is unquestionably in a class by itself, it stands among pink shades as a flower, where Carola stands as a crimson, but, unlike the latter, it seems to be good with all growers. As shown by S. J. Goddard and Wm. Sim it was superb. Mr. Goddard's hundred was, after judging, set up in a basket, the effect being decidedly pleasing. This vase, as originally staged, gained the A. C. S. Gold Medal.

"White Delight, as shown by Strouts Inc., was, to my way of thinking, the best white, though not so large as Crystal White and White Benora.

"Denver, a new blush, is a good flower, and a laster, though not equal to White Delight in the latter respect. White Delight won the Texas prize after being packed about 50 hours.

"Improved Mrs. Ward, shown by Strouts, is certainly an advance on the old favorite, which, in its class, has been without any serious rival.

"Rosalia is decidedly fine, the colour is almost bordering on scarlet. The vase shown by S. J. Goddard was one of the best things in the show.

"Eureka, Happy Day and Edna are all first-class scarlets. The latter has wonderful lasting powers, as it was three and a half days on the road, yet came out smiling although too late for competition. Had it got through, I believe Baur and Steinkamp would have captured the Dorner Memorial Medal, which went to Donald, a deep crimson, shown by Strout Donald may prove itself good, and I doubt whether it could win out against either of Mr. Wallace's crimsons.

"Maine Sunshine is decidedly good; it may be fancy, but it struck me that the colour was deeper than Saffron. The Lark is a pleasing flake, a classy flower and equal to Benora, but paler. Morning Glow is dainty, though not large. It reminds one of the varied colour of Mrs. A. F. Dutton. Democracy, as shown, is weak in stem, its red sport still more so. Lassie, another vivid cerise, was also weak in stem.

"Harvester, the new white, is good, and it can travel; it was a companion of Edna which got lost on the road. Ruth Baur is a good salmon pink. Dorner had a good salmon pink seedling, but this, together with Happy Day, was a day late in arriving. Rosalind, which gained the A. C. S. Silver Medal, is not unlike Morning Glow, but is larger.

"These were the most notable among the newer sorts, but a number of other more or less interesting varieties, new to me, were on view. Thos. Jay, a white, may prove highly useful. Enchantress Supreme appeared to be a back number. Pink Delight, Cottage Maid, Doris, Herald, Belle Washburn and Ethel Fisher were all well shown. Even the old Mrs. T. W. Lawson was represented, and when compared with Laddie one gained an idea as to the advance in recent years.

"Regarding the business end of the show, it seemed to me that in the way of judging the old country can win in a canter for expedition. The meetings, on the other hand, as run by the A. C. S., completely outclass the annual meeting of the B. C. S. As for the banquet, which concluded the two days' proceedings, I feel I was badly stung when I paid five dollars."

Horticulture Publishing Co.,
Boston, Mass.

Gentlemen:—

We want to compliment Horticulture on its able and complete report of the National Peony Exhibit held at Boston June 18-19th.

You certainly covered the ground in a generous manner.

Sincerely yours,
D. C. STRANGER,
Cherry Hill Nurseries.

W. D. HOWARD, Milford, Mass.

# Mildew on Roses and on Grapes and Gooseberries

IT was in the summer of the year 1886—35 years ago—there was a vineyard in the Town of Fishkill that was sorely troubled with Mildew; and after a little practical experimenting, the powder "GRAPE DUST" was found to be quite successful in controlling the Grape Mildew.

Immediately following this, the Mildew on Roses, both indoors and out-of-doors, was attacked by using the GRAPE DUST with a Bellows on outdoor Garden Roses. Its faithful use in this simple manner was very successful in preserving the foliage of the Rose bushes.

A Florist of repute tried it against other remedies on the Roses planted for an early crop of Commercial Flowers. The result was appreciation of the article which was called

## HAMMOND'S GRAPE DUST

**It is used from Long Island to California. It is simply dusted on the Plants. Our goods sold by the Seedsmen of America and won the Gold Medal at San Francisco World's Fair**

## Black Spot on the Leaves of Roses

This disease is one that seems to be well nigh universal wherever Roses are grown, although some varieties are more tender or less able to resist its inroad than some others. In our experience, on the banks of the Hudson and elsewhere, it develops more perceptibly during a spell of warm, humid weather, and this weather condition will quickly spread a few spots over half a leaf. The leaves first show a small black spot, which grows, and grows fast in a day or two of humid weather; and sometimes the leaves of a bush will drop off so as to be perceptible. A Moss Rose will sometimes seem to be struck with this trouble when a more common kind will show less. This Black Spot, which is called "Actinonema Rosae," grows in the tissue of the leaves, and where Roses are grown, whether outdoors or in large or small greenhouses, this trouble is apt to occur.

In treating Roses for Black Spot, the remedy, to be effectual, needs to be used early. For years it has been demonstrated that

## HAMMOND'S COPPER SOLUTION

IS A RELIABLE PREVENTIVE REMEDY. After the leaves have started, syringe or spray the bushes with the diluted solution. And this care may need to be taken two or three times during the season. And in a greenhouse, as a preventive measure, spray the soil in which the Roses grow. The Rose Rust is a trouble which affects hardy Roses more than some of the more tender varieties, and the very use of the COPPER SOLUTION as a preventive remedy for Black Spot has the effect of checking the Rose Rust.

## HAMMOND'S SAFE REMEDIES

**For General Service Sold By Seedsmen**

**Thrip Juice**, for Aphis or Lice, Red Spiders and Soft Scale. In use since 1883.
**Cattle Comfort**, used first in 1887.
**Grape Dust**, for Mildew, etc. Used on Grapes and Roses since 1886.
**Copper Solution**, a useful Fungicide for many things.
**French Bordeaux Mixture**, in Pulp. A Standard Fungicide. (When we first made this preparation in 1888 we could hardly get it tried as a gift.)
**American Sheep Wash**, to destroy parasites on Sheep or Calves. In use since 1886.
**Scrofularia Powder**, made to prevent the ravages of Carpet Beetles in 1888.
**Horicum**, a Lime and Sulphur preparation made in 1904.
**Slug Shot**. Kills Sow Bugs and insects in Field or Garden. Used since 1880.
**"H. W. K."**—Hammond's Weed and Ivy Killer, a great saver of labor—used first in 1886.

MADE AT BEACON, N. Y.

## REVIEW OF FRENCH ROSES

**By Samuel S. Pennock**

In company with J. Edward Moon, we left the hotel in Paris, Wednesday morning, June 15th, taking the Metro to Porte Maillot, then trammed to the Bagatelle Gardens. Unfortunately, we got off two stops too soon and had quite a walk, reaching the Gardens a trifle after nine, when we should have been there at nine. J. Edward Moon acted as my valet, carried my camera, tripod and took pictures for me. He did his part very well as if he was used to it and not usually the boss.

We found most of the jurors assembled and soon met Monsieur Forestier, who introduced us to the jurors, among them the English representatives.

The judging was commenced very promptly and each juror was handed a printed list of all the roses to be judged, this list giving the names of the roses, the parentage, the class and the introducer. One list was for the roses of 1920-1921 with the scores of 1920 marked up against them; another list was for the roses of 1921-1922. This is a very excellent way of judging all new roses, not only the fact of giving them two years' scoring, but having them in printed form with the results of the previous year.

Probably a good many of the roses would have scored higher, had conditions been more favorable for them. English jurors, like myself, seemed a little more conservative in the giving of points than the French and oftentimes a vote was necessary to decide. Ten points was the maximum given and only two roses of 1920-1921 scored ten points, and the highest that scored of 1921-1922 roses was one rose, 8 points, and others ranging from 3-7 points. A number of them were not in extra good shape, and were put down as reserve, as the French would put it, which is an excellent plan, as next year they may show up in much better shape.

Each class was judged separately,—first, the 1920-1921 and then the 1921-1922. To some of us the judging seemed to be in some instances rather hurriedly done, although, taken as a whole, we believe each rose was given what it should receive.

The rose that stood out in the gardens head and shoulders above any other rose was a bed of Pernet-Ducher's H. T. Gold Medal rose of last year, Souvenir de Claudius Pernet, named in honor of his son, whom he lost in the War.

There were also a few plants mixed in the bed of Pernet-Ducher's H. T. rose, Mme. William Marcel Delanney,

a medium pink, with very full large flowers.

Claudius Pernet is certainly a wonderful rose, a rich canary yellow, fading out as it gets older to a lighter shade; large, full, long well-shaped bud, as large as any H. T. rose in the garden. These flowers were borne on fair length stems, well foliaged, holding their heads perfectly erect. It certainly was a joy to see this bed and was well worthy of the name it bore. It is too bad that this rose is not a forcer, but the consensus of opinion seemed to be that it was not, and would go to sleep in the winter time.

The rose that captured the Foreign Gold Medal this year was Howard & Smith's H. T. rose, Nr. 252; and Pernet-Ducher's Souvenir de Georges Pernet the French Gold Medal. Howard & Smith's rose, Nr. 252, is pronounced Indian yellow color. The outer petals fade out some, is a good size rose, full, very double, shape when more than one-half open not quite as pleasing as when in bud or full open, a good grower, splendid foliage, good stems and a rose that attracted the judges immediately and well worthy of the Gold Medal.

In the climbers, Paul's Scarlet Climber stood out in the garden by far the best among the climbers, and they said that it had been in bloom for over two weeks and was still in fine shape and attracted the public probably more than any other one rose in the gardens. There were several plants of Paul's Scarlet Climber and one group of four plants trained up in pyramid shape made a wonderful show. This is rather an attractive way to train climbers, especially where they are as free bloomers as Paul's Scarlet Climber, which presented almost a solid, vivid red mass.

Amile Nerine, one of Nonin's seedlings, much on the order of Excelsa but light in color and comes into bloom much earlier, was very attractive and looked like a promising climber. The public admired it very much.

The Rev. Mr. Pemberton of England was elected Vice-President, representing the English, and Samuel S. Pennock, Vice President, representing America.

After our counsel meeting, we adjourned to the Chateau de Madrid, where we enjoyed a very splendid, well served luncheon amid delightful surroundings.

Altogether this day was a wonderful experience for me, meeting a most delightful bunch of men, and it was certainly a great honor to be numbered among them,—an experience I hope and trust I will be able to repeat again at some future time. They had a few speeches, not very many, and short. We were welcomed by the President, M. Cherious, and both Mr. Pemberton and myself asked to say a few words, which we were glad to do. I extended an invitation to any who could come and join the American Rose Society on their pilgrimage to the Northwest in June, 1922. They are very anxious that the American Rose Society have a representation each year at the Bagatelle Gardens, two representatives if possible.

Mr. Nonin and Mr. Barbier gave us a very pressing invitation to visit them, so that the next day, the 16th, Alexander Dickson, Senior and Junior, Mr. Wallace, Mr. and Mrs. Moon and myself visited Mr. Nonin's place at Chatillon, Paris. Here we found Mr. Auguste Nonin and his son Henri. The latter spoke very good English and showed us around the place. They had several very excellent roses, grown from one of their seedlings, a red Polyantha La Fayette, which is to be introduced this coming year in America by Howard & Smith. This is apparently an exceptionally fine polyantha, large red flowers and a good, free grower and bloomer.

## STEPHANDRA.

A few smoky hued pink and yellow zinnias were in a brown straw Japanese basket. They needed something to set them off. Ferns were either too delicate, or the polypodium too stiff. Then I thought of the dainty, brownish leaves of the stephandra. After I had placed sprays of them with the zinnias in the brown basket I was reminded of beautiful stained glass windows, or of the pictures in the Academy in Venice. There was the same rich wealth of color. The stephandra, which is green in spring, grows more beautiful in color as the season advances, till in the autumn, after the flowers have gone from the garden, I have often used its red leaves as a decoration for the table.

Another pretty, light effect of color for the table are varied shades of blue larkspur with the soft yellow of the Hunnemannia poppies. A joy in the Hunnemannia poppy is the way their green buds open in the house. They are a little difficult to start in the spring, but their beauty, as late summer and autumn advance, rewards one for the difficulty of sometimes resetting them from the cold frames in the spring.

Mrs. Tracy, among her pleasing arrangements of flowers at the gladiolus exhibition in Horticultural Hall, Boston, had some red gladioli in a basket with dark green oak leaves which were delightful. She also showed a creamy yellow gladiolus with markings of soft pink which just blended into the color of the Joe-Pye-weed with which it was combined. I had used the Joe-Pye-weed by itself, but had not seen it used with garden flowers. Yet after a ride of two hundred miles from Greenwich, Connecticut, to Weston, I slept dreaming of the fields of Joe-Pye-weed and golden-rod I had passed, just our common New England flowers.

M. R. Case.

Dollerest Gardens,
Weston, August 16, 1921.

# RHODODENDRONS

**Hardy Hybrids Mixed Colors**

Grown in our Cape Cod Nurseries. We have them in the following sizes—12 to 15 in.; 15 to 18 in.; 18 to 24 in. Nice, clean, bushy plants.

# KALMIA LATIFOLIA

**(Mountain Laurel)**

Nice, bushy, nursery-grown plants, in the following sizes—12 to 15 in.; 15 to 18 in.; 18 to 24 in. We can quote you very attractive prices. This material is scarce and will be snapped up quickly.

## R. & J. Farquhar Company

**6 South Market Street, Boston, Mass.**

# RAMBLING OBSERVATIONS OF A ROVING GARDENER

What a time we gardeners have in trying to get the proper pronunciation of flower names! We are constantly hearing our employers coming out with new ways of using flower terms, and feel that we are old fashioned if we don't adopt them, too. In looking through one of the latest books on the subject I find that we are expected to say "dählia" with the "a" as broad as any orthodox Bostonian can make it. The explanation given is that the flower was named after Dahl, and accordingly should follow that name in its pronunciation. Still, I think if we begin to talk about "däh-lias" around the shows we are going to get laughed at. In time it may come, just as most of us have gotten now so that we can say "gladiolus" with the accent on the "i" with a fairly clear conscience.

Sometimes growers fail to remember, unfortunately, that gladioli is the plural of this word. Not long ago I saw a sign which read: "Gladioli's for sale," which of course is all wrong, although the sign was put up by a grower well known in the trade.

Lilium candidum is now being planted by garden makers who realize that this is the best time of year for this lily to go into the ground. I wonder if the experience of gardeners in this country has been similar to that of a writer in one of the English papers, who says that deep planting is a cause of failure. This man writes:

"My soil is a heavy one, and the Madonna lilies were becoming fewer yearly. Acting on the suggestion that they disliked deep planting, I dug up two remaining clumps, and was surprised to find a large number of fine and apparently healthy bulbs at a depth of about twelve inches. I dug them all up and replanted them only a couple of inches from the surface. This spring I counted 47 fine flower spikes, all looking the picture of health, in place of nine or ten poor heads that they produced under former conditions."

The observation has often been made that the Madonna lily is rather freakish in its temperament. It grows well in one garden, but in another invariably sulks. When it is a success, though, it is a lily to be prized, especially when used in an appropriate combination. The fashion seems to call for an association of Lilium candidum with larkspurs, but there are other flowers which look equally well, including pink rambler roses.

I think that as a rule the lily gives best results if left undisturbed for many years. Perhaps that is one reason why it often flourishes so luxuriantly in small back yard gardens while proving a dismal failure on show places.

At the recent Gladiolus Show in Boston, Mr. James Rust made an exhibit of Campanula pyramidalis, which was as impressive as it was delightful, and it is difficult to understand why no award was given him for this display. The plants were grown in tubs and were almost perfect in form and flower. While plants of this kind are rather large for use in the house, they make splendid decorations for a large porch.

One of the things which I like about the catalogues of Mr. Harlan P. Kelsey is the wealth of information which they give about the proper cultivation of the plants he sells. If all customers would follow his directions for growing rhododendrons, including the hardy azaleas, there would be fewer failures. Mr. Kelsey points out that nature provides against the drying out of these and other broad leaf evergreens, including the kalmias and the leucothoes, by supplying a mulch of leaves the year round. This is a lesson which many gardeners have yet to learn. And yet it is the most important point in the growing of rhododendrons. Mr. Kelsey makes this very plain in the following paragraph:

"Mulch, and yet mulch again, all the year round. This is the great rhododendron secret. As soon as planted, cover the entire surface of the ground with a vegetable mulching—preferably hard wood leaves—to the depth of several inches when reasonably well packed. Never remove this mulching, but let it remain the year round, and every fall add a new layer of similar depth.

"A foot of leaves in the fall means but a half-inch or so of humus the coming season—the future food of the rhododendrons or azaleas. A thin dressing of loam and well-rotted manure may be used to hold down the fresh leaves as an aid to decay. The leaves keep the surface cool in summer and warm in winter. This is the great secret of rhododendron growing."

Glory Gypsy Prince Albert

Mr. Kelsey has ideas of his own in regard to the planting of rhododendrons. He believes that for the best landscape effects as well as to provide a continual succession of bloom throughout the season, there should be a liberal use of fillers or edging plants. But he points out, too, that great care must be taken in choosing them, especially as to the time of blooming and color effects, so that there will be no clashing. Some of the best fillers and edging plants recommended by Mr. Kelsey are the following:

Andromeda polifolia, Chamaedaphne calyculata (Leatherleaf), Leiophyllum buxifolium (Sand Myrtle), L. prostratum (Mountain Heath), Ilex glabra (Inkberry), Leucothoe catesbaei (Leucothoe), Pieris floribunda (Andromeda), Taxus minor (Canada Yew), Galax aphylla (Galax), Gaultheria procumbens (Wintergreen), Houstonia (Bluets), Mitchella repens (Partridgeberry), Shortia galacifolia (Oconee Bells), Vinca minor (Periwinkle), V. minor alba (White Periwinkle), Zanthorhiza apiifolia (Yellowroot), Lilies, Trilliums, Erythroniums (Dogtooth Violets), Ferns in great variety, Violets, Dicentra eximea (Fern Bleedingheart), Iris in great variety, particularly pseudacorus and Japanese; Azaleas in variety, Ilex verticillata (Black Alder), Aronias (Chokeberry) in variety and many other berry-bearing shrubs.

Jonquils and other spring bulbs may be used freely near the borders of plantations with charming results.

---

I have been greatly interested in reading C. S. Harrison's Manual of the Peony. Mr. Harrison was a wonderful man and a great asset to the peony movement. His little book contains a great number of very important suggestions, and his reminiscences and observations are as helpful as they are entertaining. The following quotations from his chapter on the originators of the peony may be worth while.

The name of J. F. Rosenfield will always stand prominent among those who love the Peony. He has been a careful, accurate and tireless propagator. We are indebted to him for Golden Harvest, Floral Treasure, Karl Rosenfield and others.

The late Mr. Hollis has given us some fine ones. He also named too many. But some are of superior merit. I remember I paid him $10 for his Loveliness.

Others have furnished a few. For instance W. H. Bruning of Nebraska raised a charming white one from seed of LaTulipe and I bought half of it. Many others have been produced by private parties.

One of the foremost to introduce the Peony was T. C. Thurlow of West Newbury, Mass. He seemed to absorb in his gentle soul all the sweetness of his flowers and the harmonies of nature. He was the dearest friend I ever knew. He had a strong influence on my own life and awakened a passion for the beautiful which has grown with the passing years. What visits we had. We were soul brothers and of the same age. He wrote the first article on the Peony. He had a large collection. The gardener of a rich man in Illinois called on him, looked over his grounds, examined the stakes, took note of the varieties and asked what he would take for the lot. "$7,000.00." "I will take them." They filled two cars. Mr. Thurlow then proceeded to get up a new collection, better than the first. The sons have inherited the spirit of the father. They are originating new sorts, some of superior merit.

---

Carl Kimmerling, a florist of Roanoke, Va., was recently married to Miss Martha C. Crimmings, of Medford, Mass.

C. Quagland's Sons, of No. Adams, Mass., have opened a down town branch on Main street, which they will maintain as a display and sales room.

Otto Goodwin, of the Rosary, Boston, Mass., is just back. A Connecticut vacation in which yachting played a prominent part.

# Burpee's Sweet Peas

Mrs. Warren G. Harding

*"The Harding Blue"*

FLORISTS and Commercial Growers all over the world have come to realize the importance of Burpee's New Early—or Winter—Flowering Spencer Sweet Peas. Burpee's Sweet Peas are famous, and the House of Burpee is recognized the world over as American Headquarters for Sweet Peas. Free-blooming character combined with sturdy growth and trueness to description are qualities of the Burpee varieties that are well appreciated by all particular Growers. The Burpee list contains a complete range of colors including the most desirable Florists' shades.

Those who require the latest and finest will be interested in the Burpee Novelties for 1922, now offered for the first time to the Growers. Complete description of all varieties and novelties, together with many illustrations, are given in our **Special Folder of Sweet Peas for Florists.** Every Florist and Grower should have it. **Write for a free copy today.**

## ART IN FLORAL ARRANGEMENT

"ART," as I understand it, means a system of rules and established methods to facilitate the performance of certain actions, familiarity with certain principles and skill in applying them to an end or purpose, such as making a floral design.

The first item of importance, when you are making up a design, is that the recipient does not discover some part unfinished that would offset the beauty of the flowers, or the excellence of the work. You don't want your customer to see rusty wire, moss exposed, unsightly tooth-picks, a beautiful design with the back uncovered, tin-foil showing, etc. The florist or designer should at all times try to protect our profession by attending to the little points of detail that go towards making what we call "Art in Floral Arrangement."

I shall endeavor in my demonstration to more fully point out these errors of omission. Co-operation in floral arrangement is the key to success, you must learn by experience or from one another. There is no school, college or correspondent course, no other way but by practical experience. What knowledge I possess was gained this way. I had no one to teach me.

Select a system, work at it, prove that it is practical, and then adopt it as your own. Teach whoever you think is most likely to take an interest in your business. If they find out you know how, they will endeavor to follow your lead, and as they succeed, they will take a greater interest in you and your business.

Paper read by S. A. Frost, of Toronto, at the Canadian Florists' Convention.

If I was making a design or arrangement of flowers and was called away my clerks could take hold and finish without any explanation from myself other than color and price of the order in question.

In figuring out the worth of a design we calculate the moss, frame, time and all other accessories necessary in making up the same. In calculating the flowers that are used we figure on the value of what the flowers are made to appear.

Experience will teach you almost at a glance what to do for the money allowed. In explanation of the above, the idea I mean to convey is, if you can make a No. 3 flower look equal to a No. 1, that is the real value of the flower in the design.

If you use a system in all your arrangements, your work is always the same; it matters not what you use if you carry out your system and combination softening and arrangement according to the flowers you have in stock or the flowers that should be used.

Sometimes your customers will insist on picking out the flowers; in that case you must do the best you can, as it is our duty to cater to the public and to please them if possible. This only happens once in a while; in fact, for some years we have had very few customers dictate to us what we should put in a design, for in most cases they leave it entirely to our own judgment.

The first thing to be done, as you all know, is to moss the wreath. It is the foundation of your design, and like all other foundations must be properly laid. Sphaghnum moss is the best known to the trade. Next we will arrange green wax paper in such a manner as to assist in shaping up the moss, keeping streamers from hanging unsightly to view. The proper system in mossing a wreath is to gather the moss up in your hands, completing the section of frame according to the amount of moss gathered up, and roll to and fro, working your finger on the inside of the frame, and the thumb next to the outer edge till you get it to the proper firmness and shape, taking care that the moss contains the proper moisture.

As we all know the moss is not only

EVERGREENS

Send for Price List

to hold the flowers in their place, but is the means of conveying the necessary moisture to keep the flowers fresh as long as possible. To obtain that result be sure you insert the stem well into the moss. This is one of the most important points.

Now that we have our frame all ready for the flowers, how are we to put them in? First I will arrange cedar evergreen, binding the fronds as I go along with thread, completely covering the back of the wreath. Now we are ready for the real work.

I commence with what evergreen we are going to use, and for this demonstration I am proving to you that I am a Canadian by using what I consider to be the prettiest of all evergreens, and the most durable, our own Canadian cedar.

Follow me as I work these fronds through the moss at an angle corresponding with the shape of the design and at the same time making each frond look as if it came from the centre of the moss.

The flowers that I have stemmed ready for use in this demonstration are prepared in this manner: My longest stem flowers are stemmed with a wire six inches long, the next length in five inches, the next four inches and the shortest stems on tooth-picks. In other words, the best flowers are stemmed up the longest, the next grade shorter and the poorest are worked in underneath.

Now I take my longest flowers, and arrange them at the same angle as the cedar fronds, filling in with the second size, then the third length and finishing up with the shortest flowers on tooth-picks, the object being to make it appear as if the flowers were coming from a given point, and also conveying the impression that two garlands of flowers have been put together, coming from the said given point. All designs we make are all on the same principle, that is, every flower, but what is used in solid work, is made to appear as if it were coming from a certain invisible point.

Last, but not least, be sure to spray your design before you send it out.

Now if you are not weary I will demonstrate to you how to make a basket of flowers look as if they grew there. My objective is to have all flowers seem to come from a given centre. You will note no two flowers are arranged the same height, but are all graduating from the same point, and thereby give the effect of growing there.

Now in this demonstration you will notice that I have used the commonest of flowers and basket obtainable in the endeavor to prove to you the efficacy of my system.

**Nursery Stock Short** There never was a time when so many prominent nurserymen were touring the country and visiting other nurseries. These men are looking for small lining out stock, of which there is a great dearth. This is true most particularly of evergreens. It is impossible to get nearly enough stock to meet the demands of growers. Four or five year old stock is available, and plants a year old may be obtained, but there is almost nothing between them, according to the statements of prominent nurserymen. This is the direct result, of course, of the war, plus the effects of quarantine 37.

While the war was on, and for the year following its close, labor was scarce and high, and very little propagation was done. Then came a marked shortage in seeds. This shortage still continues. The crop of many conifers was very short last season, and when a crop is short a lot of poor seed is invariably put upon the market. This is because in seasons of plenty a surplus is stored away until another period of scarcity, when they are put upon the market. By that time, in many instances, they have largely lost their power of germination.

Plainly, therefore, there is going to be a decided shortage in small evergreens for some years. And while lots of a few hundred may be obtained here and there, there are very few nurseries which are able to meet the demand for large lots, and these nurseries, as a rule, want to keep practically all their stock for themselves.

---

**United Selling** In their plans for a united selling campaign the florists of New York are arranging a system of mutual helps which ought to prove of great benefit. When an advertising campaign has been arranged for, each member of the association will be notified when the advertisements will appear and encouraged to prepare special window displays which will back up the campaign. Circulars for display in shops or windows will be distributed at the same time. In other words, an effort will be made to have every member work with one accord for a uniform end. If this can be done it will certainly move any surplus stock which may be piled up.

Of course, much depends upon the way in which the advertisements are worded. They must be written carefully, so as to make the fact plain that the only reason for a reduced price is an unusually large stock at the moment. If the public gets the impression that florists are ordinarily profiteering or selling flowers for a higher price than they need to charge, the advertising will prove a boomerang. On the other hand, if the fact is emphasized that the florists are simply giving the public an opportunity to take advantage of an abnormal situation, they will appear to be doing their customers a good turn, and will stand higher than ever in the latters' esteem.

Apart from this feature of the campaign, which is very important, its success will depend wholly upon the degree of co-operation which is obtained. That is the rock upon which plans of this kind have split in most cities. Much depends upon the proper leadership and, in any event, wherever this scheme is tried, there should be a committee representing all branches of the industry, so that florists, growers and wholesalers alike should feel that they were getting a perfectly square deal. The move is in the right direction, and eventually must bring about an improved situation in the trade, overcoming what is now one of the greatest sources of loss.

---

**A Good Convention** Seldom has a convention of the S. A. F. and O. H. been held when there has been greater unanimity and good feeling than at Washington last week. It seems to be the general consensus of opinion that an admirable choice was made in both the president and the vice-president. The secretary and treasurer remain in office, as a matter of course. It would be hard to get better men.

Mr. Pennock, the new president, is one of the best men in the trade, and a man practically without an enemy. He has the even temper and perfect poise which is needed by an executive, yet if occasion arises he can show the utmost firmness, and act promptly and with decision in an emergency. The society could have made no better choice.

It is much the same with Samuel Murray, of Kansas City. There are florists in plenty all over the country who can vouch for the fact that Sam Murray as a friend is a friend indeed. It would take a long list if one should attempt to name over the number of men whom he has helped in one way and another during the many years in which he has been in business.

As was predicted by the florists of Washington, the weather was all that could be desired, and the Washington florists proved the best of hosts. Altogether the convention was an unqualified success, and the society starts another year with the brightest of prospects.

# "Montgomery's Priscilla"

That's the name of the new pink rose! The name will be "Priscilla" probably after the public has had it a while, but we have had to add the prefix to cover the rules of nomenclature.

In order to get someone who knows more about roses than we do to give an unbiased, honest opinion on the merits of this rose, we have placed 12 plants of it with each of the following rose growers:

E. G. HILL CO., Richmond, Ind.
DAILLEDOUZE BROS., Brooklyn, N. Y.
ALBERT H. AMLING CO., Maywood, Ill.
DUCKHAM-PIERSON CO., Madison, N. J.
ROWAYTON GREENHOUSES, Rowayton, Conn.
MILLER FLORAL CO., Farmington, Utah
WELLWORTH FARM GREENHOUSES, Downers Grove, Ill.
A. S. BURNS, JR., Spring Valley, N. Y.
ROBT. SIMPSON, Clifton, N. J.
CHAS. H. TOTTY CO., Madison, N. J.
NOE-RUZICKA CO., Madison, N. J.
WM. H. ELLIOTT CO., Madbury, N. H.
ANTHONY RUZICKA, Madison, N. J.
W. J. PILCHER, Kirkwood, Mo.
JOS. HEACOCK CO., Roeloffs, Pa.
WENDLAND & KEIMEL, Elmhurst, Ill.
JOY FLORAL CO., Nashville, Tenn.
ROBERTS ROSE CO., Denver, Colo.
GEO. C. WEILAND, Evanston, Ill.
LAKEVIEW ROSE GARDENS, Jamestown, N. Y.
BASSETT & WASHBURN, Hinsdale, Ill.
HARRY O. MAY, Summit, N. J.
F. R. PIERSON, Tarrytown, N. Y.
L. B. CODDINGTON, Murray Hill, N. J.
JOS. H. HILL CO., Richmond, Ind.
STEPHEN MORTENSEN, Southampton, Pa.

Ask them about it, if you will, at any time. They have our permission to tell the truth. We are going to let this rose sell itself! We shall be simply order takers.

A. N. PIERSON, Inc. Cromwell, Conn.

## LURIE GOES TO ITHACA

Mr. Ralph Roskelly, president of the Bool Floral Co., Ithaca, N. Y., announces that Alexander Lurie, who the past four years has been part owner of the Blue Maize Blossom Shop at Ann Arbor, Mich., has sold his interests to his partner and has accepted a position as store manager of the newly incorporated Bool Floral Co. Mr. Lurie is a graduate of the Department of Floriculture, Cornell University. At Ann Arbor he was very successful and his corsages and decorations for social functions created a great deal of attention.—A. H. N.

To The Trade—

Thos. F. Galvin, himself, will give your orders his personal attention at his son's store.

## George Watson's Corner

"You in your small corner and me in mine."

At the Dreer Nurseries stocks are looking exceptionally fine just now. This covers all three places, Riverton, Riverview and Locust Farm. The management is always ready to give the glad hand to visitors, and nothing pleases them better than showing people around. Although Mr. Eisele is away on a Pacific Coast trip at present, his place is ably filled by George Strohlein and his heads of departments. The water lilies are particularly fine at Riverton and are worth going a long way to see. The cannas are also beginning to make a show, and in a week or so will be in full bloom. If visitors to the East get as far as Washington they are within easy distance of Riverton and should make it a point to see the Dreer place before going home.

We had a very pleasant visit today from P. Joseph Lynch of the Dingee & Conard Co., who in spite of his great political interests in Indiana and elsewhere is still an enthusiast in roses and all connected therewith. His ideas on the development of the queen of flowers, as he looks back on his more than thirty years' experience, are very interesting, and I only wish you could hear him, or that I had a shorthand artist hidden in the ceiling.

**A. L. MILLER, Jamaica, N. Y.**

turned out, the church turned out, the Masons turned out, and there were speakers from every direction. The wall of flowers in the Presbyterian Church at Second and Pearl streets, represented the most remarkable testimony that I have ever seen in the way of "Say it with Flowers." Even the wholesalers, like Niessen, Berger and Pennock had to send their tributes of lilies and delphiniums. When these overburdened citizens loosen up, it means something! The flowers came from everywhere, and they made one grand show to a departed florist. The speeches were great at the church, and at Harleigh Cemetery there were more. All of them wonderful! The firing squad and the bugle over the grave! The march of the Masons and the ceremonies; the Presbyterian solemnities, and the final good-bye of the relatives and friends rendered this tribute to Raymond Thoirs, one of the most remarkable I have ever witnessed. So it will go down in history as the tribute of the American people to a family who gave their only son as a sacrifice to keeping the war lord from these shores. We all feel it and we try hard to say it.

The Dreer windows were unusually interesting this week, having a fine display of Nymphaeas, Nelumbiums and other aquatics, all carefully labeled, and giving timely information to the passing throng.

We missed Adam Graham and a few others of those who attended the convention, but we had quite a number of the old timers to give us a look-in in the beginning. P. Welch and Allan Peirce of Boston; P. Joseph Lynch of Indiana, and Ian Bell (otherwise John C. Bell) of Edinburgh, Scotland, called on their way through, and were a pleasant ray of sunshine in their passing. P. J. has just got back from a trip to Quebec with wife and family. They had a glorious time. Ian Bell has been around a bit—New York, Washington, etc., and still feels pretty good, but not quite so sure as when he started that he knows all about America. Allan Peirce can now spell "axel" better than P. Welch can pronounce it. These Jersey shore highways are full of sudden big hooch wagons. Allan says that's what broke the axel. Stopping too sudden. P. has a different idea. He thinks it was a case of "blood-pressure." P. is always up-to-date. A few years ago the doctors would have said "appendicitis." But today all the doctors tell you "blood pressure." It's a fine outstanding word, and gives artistic verisimilitude to a bald and uninteresting narrative.

Hulot, Canary Bird, Captivation, White Glory, and others too numerous to mention. They certainly were a great attraction and brought the crowds on Market street to an admiring standstill all day long.

L. S. Peterman, the well known Altoona, Pa., florist, was one of the most interested visitors at this Michell Gladiolus Show. He was ably conducted around by the president of the company (Henry F. himself) and your scribe had to smile a little at the side-talk between the two about the price of flower pots. If the flower pot makers could only have heard the harsh words said about them, their unholy dollars might have got hot and burned a hole in their wicked pockets. So we extend to them a friendly warning. Come down, fifty per cent, so why not be decent. The glass men have already come down, fifty percent, so why not the pot men. Let us get back to a pre-war basis as soon as we can and make things hum.

## NEWS NOTES.

Alphonse De Guire has become manager of the Crandell Flower Shop, at Glens Falls, N. Y.

John Pulscher and Ray Buckles, proprietors of the South Bend, Ind., Floral Co., have purchased the D. W. Rettic Greenhouses, which they will remodel and improve as needed, to put them in the best of condition. Stephen Solonsky will have charge of the greenhouse.

The Dayton, Ohio, Flower and Plant Co. has just been incorporated for $50,000 by Rolf Zotlitz and H. O. Pentley.

## GLADIOLUS SHOW IN BOSTON

### The Biggest Event of the Kind Ever Staged in New England, and a Great Success

All records for exhibits and attendance at a Gladiolus Show in Boston were broken Saturday and Sunday, August 13 and 14. This show, which combined the exhibits of the Massachusetts Horticultural Society and the New England Gladiolus Society, came at a time when the flowers were at their best, and the growers of New England co-operated heartily in making a remarkable display.

In the twenty-two years that Joseph Spry has been placing the tables and vases for flower shows in Horticultural hall he has never, he says, brought out so many. In fact, the show used every table and every vase and every basket in the possession of the Massachusetts Horticultural Society and all the halls in the building were filled with flowers—literally bulging with gladioli.

The individual exhibitors numbered close to 20, according to James Wheeler, the superintendent of exhibitions, and some of the exhibitors showed many thousands of blooms. The platform of the lecture hall was occupied by the entries of S. E. Spencer of the Brookland Gardens, who is first vice-president of the New England Society. He had about 200 blooms, including an original yellow, which he has named Amy Belle, and Evelyn Kirtland. On the opposite end of this hall there was a display of some 2000 blooms by Thomas Cogger of Melrose, who had woven oak leaves into the arrangement for decorative effect.

One of the fair visitors, upon entering the main hall, had her attention arrested by the first table corner, because of the color effect. She said that it contained, in orderly array, all the Paris colors which are coming out

this season in millinery and dress, being a gradual rise from purple to mauve. This particular exhibit had been placed there by Stanley Thorpe, who showed 300 to 400 blooms, mainly of the Metzner varieties, but also some seedlings. In his collection there was Kadota, Challenger, and Yellow Prize.

Nearly opposite this "fashion" corner there was a display of about 500 spikes by B. and A. Norley of Roslindale, showing in conjunction with Dr. Burton E. Lovesey. They had about sixty varieties in white and pink, and a number of Kemp selections, and many varieties of Diener and Kunderd. One of the most conspicuous in this collection was Mrs. Leon Douglas and Baron Hulot.

For artistic garden effect and table decoration the best displays in this hall were by B. Hammond Tracy of Wenham, who occupied the whole cross section at the end of the hall, usually reserved for garden purposes. There Mr. Tracy had erected a garden with cedars as a background for the gladioli, and an ornamental entrance gate, the cedars appropriately suggesting the name of the exhibitor's place in Wenham—Cedar Acres.

The table decoration in the Hammond display was exquisite. There was a round centre piece of Primulinus hybrid gladioli on a round table, and four stemmed bud vases of original design, the total color effect being soft shell pink and most delicate yellow, with suggestions of blue from the baby's breath and the delphinium that had been wrought delicately into the scheme.

J. A. Kemp had come all the way from Little Silver, N. J., to show some of his choice selections, and many of his flowers were entered by other exhibitors also. H. M. Barrett came with him, their entries being mostly of their own origination.

Two of the large exhibitors were A. L. Stephen of Waban and Dr. S. I. Moody of Brockton. Mr. Stephen, who had between 600 and 700 spikes, showed Europa among others and his new yellow "Gold," originated by Decorus of Iowa, was one of the attractions among his entries.

## NEW ENGLAND NOTES.

Mrs. Kate Oakes Cartter has leased the first floor of the Y. M. C. A. building at Westfield, Mass., for the Oakes Greenhouse business, formerly on Bush street. This will give the firm an excellent down-town location. Mrs. Cartter has been engaged in the florist business for many years, and the firm itself has been under the direction of the family for more than half a century. The greenhouses will be continued in their same location, with the down-town store used for the retail business.

A newspaper item says that William Sim, the famous carnation grower of Cliftondale, Mass., has purchased 100 tons of coal from a Lynn concern, six two-horse teams being used for the work. According to the item mentioned, this is the largest single order for coal ever bought in the town, and shows that Mr. Sim believes the time for buying has arrived.

W. H. Wyman, proprietor of the Bay State Nurseries at North Abington, is spending the summer at his delightful home in Maine.

F. F. and F. O. Shepardson are to open a retail flower store in Mansfield, Mass., in October. Mr. F. O. Shepardson is a well known gladiolus grower, and both he and his father were in the florist business several years ago.

### GREENHOUSE NOZZLE

The new Manaway greenhouse nozzle is a decided advance over any greenhouse nozzle heretofore made. By its peculiar construction the side spray is thrown out which applies the water evenly from the pipe outward. Our long-throw nozzles cover a space up to 18 feet from the pipe. We can supply nozzles that will cover any space desired. If you will advise us under what pressure your system operates and the width of space you desire to cover, we will mail without charge a sample nozzle. C. W. SKINNER, Newfield N. J.

### END NOZZLE

Every one who is using the Manaway System without the end nozzles can now fit their lines with our new 3-outlet end nozzles which take the place of not only the regular nozzle but also furnish 2 streams, one 4 and the other 8 foot out of true. One of these nozzles placed at the beginning or end of the line has the effect of lengthening the line 8 feet at each end. These nozzles can also be used in other systems which use a large nozzle. The price is 15c each, postpaid. C. W. SKINNER, Newfield, N. J.

### BULBS

C. KEUR & SONS, HILLEGOM, Holland. Bulbs of all descriptions. Write for prices.
NEW YORK BRANCH, 82-84 Broad St.

BULLETIN BUILDING PHILADELPHIA
NEW ENGLAND OFFICE L. J. REUTER in charge 15 CEDAR STREET WATERTOWN STATION, BOSTON

*Every Reader of "Horticulture" Needs*

# DR. L. H. BAILEY'S
# Standard Cyclopedia of Horticulture

Six large quarto volumes. More than 3,600 pages. 24 full page exquisite color plates. 96 beautiful full page halftones. More than 4,000 text engravings. 500 Collaborators. Approximately 4,000 genera, 20,000 species and 40,000 plant names.

IMPORTANT NEW FEATURES

**KEY TO IDENTIFICATION OF PLANTS.** This is a device to enable one to find the name of a plant. The name thus found is quickly referred to under its alphabetical location, where full information will be found in regard to it.

**SYNOPSIS OF PLANT KINGDOM.** This is one of the most important features of the new edition. It constitutes a general running account of the classes, orders, and groups of plants, with a brief sketch or characterization of 215 of the leading families comprising those that yield practically all the cultivated plants. These family descriptions give the botanical characters; the number of genera and species and the ranges; a list of the important genera; brief statements in regard to the useful plants; and diagrammatic illustrations.

**ILLUSTRATIONS.** There are 24 colored plates; 96 full page half-tones; and more than 4,000 engravings which serve as guides in the text.

**THE GLOSSARY.** This is an analysis of all technical terms that are used in the work and in similar works. It comprises botanical and horticultural terms with brief definitions.

**TRANSLATION AND PRONUNCIATION OF LATIN NAMES.** In Volume I is inserted a list of between 2,000 and 3,000 Latin words used as species—names of plants, giving the English equivalent or translation and the pronunciation.

**CLASS ARTICLES.** Special effort has been made to secure the best cultural advices for the plants requiring peculiar or particular handling. Here are some of the titles of these articles; Ants; Autumn Gardening; Bedding; Diseases; Drainage; Floral Designs; Formal Gardening; Hotbeds and Coldframes; Insects; Landscape Gardening; Lawn Planting; Orchards; Rock Gardening; Subtropical Gardening; Tools and Implements; Village Improvements; Window Boxes, etc.

**GENERAL INDEX.** The final volume contains a complete index to the entire work, enabling the reader to locate volume and page of any subject he has in mind.

WE ARE MAKING A SPECIAL CASH PRICE FOR THE COMPLETE SET OF $45.00

### JAPANESE BEETLE SPREADING

Despite the strenuous efforts of the Pennsylvania Department of Agriculture to check the spread of the Japanese Beetle, the pest has spread over a considerable area in the southeastern corner of the state.

The beetle, found in New Jersey many months ago, has succeeded in crossing the Delaware river, despite the vigilance of a river patrol. Originally found in the vicinity of Holmsburg, the beetle has spread until it is found in Fairmount Park, Philadelphia. For the remainder of the year there is no danger of the infested area being increased and officials of the Pennsylvania department are working with the Federal authorities on new control methods which will be vigorously carried out next spring.

It is planned, next year, to inspect every shipment of foliage that is shipped out of the infected area, not bothering with the shipments into or within the area but carefully checking everything that is outward bound. In this manner it is hoped to check the further spread of the beetle.

In the meantime experts are studying the problem in Japan, seeking to find a native parasite which can be imported and used in the fight on the beetle.

### SYRACUSE FLORISTS TO ENTERTAIN

The Annual Meeting of the New York Federation of Horticultural Societies and Floral Clubs will be held at 2 P. M. Wednesday, September 14th, at the New York State Fair Grounds in Syracuse, N. Y. Upon arrival the delegates will report at the booth of the Cornell Floricultural Department and the exact room where the meeting is to be held will be designated. Immediately following the business session the Syracuse Florists' Association will entertain the visiting delegates at the Oneida Lakeside Club House at Oneida Lake. Important business is to be transacted at the business meeting and there should be a full representation of the affiliated societies through their delegates. Those who have enjoyed the hospitality of the Syracuse florists in previous years know that a good time is assured.

E. A. WHITE,
Secretary.

### THE MARKET

The market remains stagnant. As a matter of fact, it is very stagnant indeed, with a pronounced glut of asters and gladioli. Apparently there has been a decided over-production of these flowers this year. Somewhat fewer roses are coming in, and the demand for them remains good, the Boston market calling especially for Columbia and double White Killarney, although one finds more Ophelias in the stalls than any other kind. Speciosum lilies have not sold as well as usual this year. Ferns are in good demand, and one sees more Clematis paniculata than in previous years used in making up bouquets.

---

The annual meeting and exhibition of the Chrysanthemum Society of America will be held under the auspices of the Chicago Florists' Club in the grand banquet hall of the Auditorium Hotel, Chicago, November 16-17.

Eugene F. Shaw, the florist, of Springfield, Mass., is rebuilding his greenhouse, a complete new steel frame being used.

William Denyer, a florist of Richmond, Ind., died recently at the age of 91 years.

# -HORTICULTURE-

Entered as second-class matter December 8, 1904, at the Post Office at Boston, Mass., under the Act of Congress of March 3, 1897.

Vol. XXXIV SEPTEMBER 10, 1921 No. 5

## THE TALK OF THE TRADE

I looked in upon Volz, the Florist, of New Britain, Conn., a few days ago and found him unpacking a big shipment of baskets and other novelties. Mr. Volz says that these accessories are selling remarkably well this season. There never was a time, he said, when baskets were in such demand in his trade. To a large extent they have taken the place of made up pieces, he says, a basket filled with well arranged flowers proving much more satisfactory than a formal piece, especially for funerals.

I was interested in what Mr. Volz had to say about the peculiar nature of his trade. There are 20 000 Polanders in New Britain, and they are among the best of customers. Their trade is always cash and they want flowers of the highest quality. Unlike many other races, they do not make much of a display at funerals, so that the call for funeral flowers from them is not large, but, when it comes to weddings, they spread themselves. Every wedding is the occasion of a big celebration, and flowers are used lavishly. While Mr. Volz sells carnations as a matter of course, he says they occupy a secondary place in his trade. The concern operates a range of greenhouses, and formerly grew carnations, but has dropped them, finding it cheaper to buy them than to raise them.

The great demand in New Britain, according to Mr. Volz, is for roses, of which he sells a great number, obtained largely at the Pierson establishment in Cromwell. I was interested to learn that Mr. Volz considers the new Montgomery's Priscilla an excellent rose, and uses it continually. Besides bedding plants, Mr. Volz makes a feature of chrysanthemums, which are coming along nicely this year.

---

Speaking of accessories in the florist shop, I found when I reached Worcester that Lange had also been stocking up extensively with this line. As a matter of fact, the Langes have gone further than most of the florists, for they have fitted up a special room in the basement, which will be used exclusively for the exhibition and sale of novelties, including Italian ware, especially imported by them, as well as gazing globes, sundials and other garden ornaments. The walls of this basement room have been latticed, and made to present a very attractive appearance. The room is readily accessible and makes it possible for the entire store above to be given over to flowers. It is an attractive store and notable for the beauty of its window decorations.

---

In talking with the brother in charge of the store, I was pleased to find that he is one of the florists appreciating the value and charm of the Primulinus Hybrid Gladioli. He said:

Attractive Arrangement of Gladioli

"We grow a great number of these Primulinus Hybrids on our own place, and use them very freely in making up funeral pieces as well as in baskets and for wedding decorations. Few flowers at this time of year are more graceful or combine better with a decorative scheme in a room."

Mr. Lange then went on to say that people not infrequently ask him to match up flowers to a gown or draperies. He picked up a piece of cloth while I was talking with him and said: "A woman brought this into the store yesterday and asked me if I could match it with flowers. I had no difficulty in meeting her wish, for I found just the shade desired among the Primulinus Hybrid Gladioli."

Of course this sort of thing pleases a customer and makes friends for a store. Mr. Lange appreciates the point I have already made in these talks, which is that the tips should not be removed from these gladioli. It is the lightness and daintiness of the entire stalk that helps to make them beautiful.

---

There can be no doubt of the fact that the gladiolus is fast rivaling the dahlia as the flower of the masses. This fact is shown by the large attendance at the shows and the enthusiasm manifested by exhibitors. A two-day show was recently held in Boston, and on Sunday three thousand people passed through the hall. This is the biggest attendance at any regular show on any Sunday in the history of the Society. It is likely to be outdone, however, by the dahlia show being staged as we go to press. Tremendous interest in this show is being manifested, and a record breaking attendance is expected, as well as a very extensive exhibit. The dahlia show, however, always brings out a big crowd.

It has been said by someone connected with the Society, and perhaps with reason, that the dahlia growers come out in great force when their show is held and then are not heard of again until next year's show. This man meant, of course, that the dahlia seemed to be the only flower which interested them, and that they did not come to the other exhibits. Of course this does not apply to dahlia growers as a whole however, for among those who always show are several men whose interest in other flowers is well known.

---

There is nothing like spending a year or so in a big wholesale establishment like that of Henry Robinson Co., of Boston, as a means of getting acquainted with the trade throughout a large part of the country. John P. Fitzgerald made innumerable friends while he was with the Robinson Co., a fact which will stand him in good stead now that he has opened a retail establishment for himself.

Mr. Fitzgerald, who saw hard service in the late war and is a member of the American Legion as well as various other organizations, has used much originality in the arrangement of his new store, which is on Huntington avenue, just off Copley square. He has divided the store space into two sections, one of which will be used solely for a display room, while the other will be strictly a workshop where the men can make up designs and handle the flowers comfortably and expeditiously.

Looking through the archway from the display room the visitor sees a great bank of ornamentals, and this arrangement seems to give size to the room. Along the top of the lattice work and over the entrance, boxes have been arranged which are filled with green ruscus. Later vines will probably be draped from these boxes over the lattice work. This arrangement gives the store an atmosphere of refinement and good taste.

It is seldom that a young florist has started out in Boston with better prospects or with the good wishes of such a host of friends.

---

I was interested the other day to notice the care with which James J. Casey of the Rosary, in Boston, was instructing his men in the wiring of flowers. There is more of a knack in this work than is sometimes realized. After inserting the end of the wire in the base of the flower, Mr. Casey gives it two or three twists around the stem and the stick. Then he makes a loop just below the end of the stems and twists the wire back in the other direction, engaging at the same time the bunch of leaves which he had just removed with his knife. This little loop, he considers very important, because it holds the flower absolutely tight. If the loop is not made around the stick below the stem the stick may work up or down, but it is fastened with absolute security when the loop is there.

It is surprising to see how much faster some men can work than others in the wiring of flowers. Much can be accomplished in the matter of speed by simply working out a plan for one's self by which the work can be done with the fewest possible motions. With a little study a man can often learn to do twice as many flowers in a given length of time. It would seem quite worth while for an experienced florist to give his men a few lessons along this line.

---

Increased interest in ferns has been stimulated by the big show to be held in Boston, beginning the 22d. When one goes about among fern growers, however, he finds that no such variety is to be seen in the houses as was the case some years ago. This applies to palms and other ornamentals as well. Most of the big growers now confine themselves exclusively to Adiantums and varieties of the Nephrolepis, although these varieties in themselves comprise a small army, one exhibitor having announced that he will show 54 different kinds of Nephrolepis in Boston. Without doubt the biggest general collection of ferns in the trade is that housed by W. A. Manda, of South Orange, N. J. In fact, it would be difficult to duplicate this collection, even if one might draw from other houses throughout the land. In the Manda establishment are to be found great numbers of tree ferns, Staghorn ferns and so on. This collection of tree ferns is most noteworthy. One whole house is filled with these plants, and they make a remarkable showing. There is occasion for congratulation in the fact that Mr. Manda is to be represented in a large way at the Boston Show.

---

Wollrath & Son, the well known florists of Waltham, Mass., have a very promising new fern which is likely to be received with much appreciation when it is put on the market. It is a sport of Teddy, Jr., but appears in several ways to be the superior of this popular fern. For one thing, it is hardier than Teddy, Jr., and for another, it never stretches out in the shade as does Teddy. It makes a very solid, compact plant, and altogether possesses just the merits which a fern must have in order to meet popular demands.

---

The Wollraths unite with other fern growers in saying that the demand this year has been remarkably heavy. Apparently the public is calling for ferns as never before. In a recent talk with Mr. H. H. Barrows, of Whitman, I was told that he had sent out more ferns the past year than ever before during the many years in which he has been in business. Curiously enough, too, a large proportion of these ferns are going to Canada.

The Wollraths say that the demand includes all kinds, and that fern dishes sell as fast as they can put them out. It is hard to explain just why the fern is so much in favor

just now, but these things seem to go in waves, and apparently the fern wave is now mounting high. Then, too, a great many small growers who foremrly raised ferns have gone out of business, so that naturally the big growers have more calls to meet.

In a recent visit to the Wollrath establishment I was interested to find a long bench of St. Paulia, a plant the flowers of which much resemble violets, and which has been seen on several occasions at Horticultural Hall exhibits. It is a very attractive plant, and the Wolraths seem to have most of the stock. One or two retailers are now handling it, and find that it sells well. I think that when it becomes better known there will be a steady demand for this St. Paulia. Besides blooming plants, the Wollraths have about 2,000 in 2¼-inch pots, which are coming on well.

It is sometimes said that cyclamen seed sown in March will not give fine plants for Christmas. That this is a mistaken notion, however, is being demonstrated at the Wollrath establishment, for on the benches there are thousands of plants now ready for 4-inch pots which were grown from March-sown seeds. They are in splendid condition and will certainly be blooming freely when the holidays come.

In another house are several benches of Gloxinias, also from seed, and making strong growth. Certainly there is no use in buying bulbs for Gloxinias when they can be grown as readily as this from seeds. Outside I found a large planting of Cleveland cherries, somewhat in need of cultivation, perhaps, but making the lustiest kind of growth and covered with berries. Cherries grown in this easy way and selling for fifty cents are money makers.

The officers of the American Gladiolus Society are well scattered throughout the country, as a result of the election held at the St. Thomas, Ont., Show. Mr. C. R. Hinkle, who was elected president, comes from St. Joseph, Mich. Dr. Frank E. Bennett, the new vice president, is a resident of St. Thomas, Ont., and a man who has done more than anyone else to make that city known as the Flower City of Canada. Dr. Bennett is in every way a live wire. Few men have done more for Canadian horticulture than he, and it was due largely to his activities that the Gladiolus Show was held in the Canadian city this year.

The secretary, David Tyndall, is a Brockton, Mass., man. Mr. Tyndall was formerly in business, but recently retired to give his attention to horticultural matters. Already prominent in the East, he is likely to take a much more active part in the horticultural world in years to come. Madison Cooper, the treasurer, hails from Calcium, N. Y., where he publishes the Flower Grower. No member of the association is better known, and none has done more to promote its interests.

Quite naturally the retiring president, H. E. Meader, of Dover, N. H., became a member of the executive committee. Mr. Meader served two years as president, and is well known in the trade, especially for his Lily White, a gladiolus of particular value to florists. Mr. Meader is a florist himself, and is now erecting a very large house at Dover. The other members of the executive committee are both well known gladiolus men, J. J. Prouty, of Baldwinsville, N. Y., and Joseph Coleman, Ravenna, Ohio.

Mr. Cooper has been receiving congratulations ever since the show, for he received the highest number of awards, 27 first prizes, 1 seconds and 1 third. Dr. Bennett, as was expected, did himself proud, having a splendid display from the 35,000 plants in his trial grounds.

St. Thomas has asked the Gladiolus Society to come again next year, but the decision remains in the hands of the executive committee which has not yet reported.

It is understood that much of the stock from Ward's Bulb Farm, of Eureka, Cal., has successfully been transplanted to the Franklin Bulb Farm at Salem, Ore. This enterprise now has some seven acres planted in Spanish iris, tulips, daffodils, etc., and is stated to be in a very promising condition. The fact that Ward's bulb farm did not make a success has been used, in some quarters, to convey the impression that California has not a future as a bulb-raising state. Developments about Santa Cruz, Alameda county and, to some extent, in southern California, will eventually correct this impression.

## THE GENUS CHAMAECYPARIS

By S. J. Sherman

Without the least of intention to underrate the justly attributed qualities of all the other groups and relatives of the natural order of Coniferae, the representatives of the genus Chamaecyparis, better known in cultivation as Retinosperas, represent and constitute a very interesting and rather numerous group of trees and shrubs which, for general landscape and outdoor decorative purposes, are unique and invaluable. Presenting as they do much diversity of habit and color of foliage, some of them being real gems of nature, they rightly compensate for all the attention possibly given for their extensive promulgation. There is, in fact, no branch of landscape gardening in which this beautiful group of conifers does not furnish us with appropriate and handsome specimens. When they are properly arranged in groups by themselves or judiciously placed in company with other evergreens, they form in the park and on the lawn, in the rockery and in the garden, even for foundation planting, the most excellent and striking effects.

All the varieties are sports from the species of C. pisifera and C. obtusa, natives of Japan, and were it not for

# PEONIES

W. L. GUMM, Peony Specialist

REMINGTON, INDIANA

**Members of the Massachusetts Nurserymen's Association on Their Field Day at West Newbury**

these varieties, the genus never would have occupied so prominent a place as it does now. Both these species and varieties were little known in the first half of the last century. They were first introduced into Great Britain in 1861, and not long after into this country, where they are probably enjoying no less popularity than in any other country.

All Chamaecyparis are quite hardy but do better when somewhat sheltered and unexposed. They thrive best in a well drained but wet soil, that of a sandy loam nature being the ideal. Their propagation is readily effected either by seed or cuttings from ripened wood. The seeds are sown in the spring and the cuttings taken in the fall, inserted in sand or sandy loam soil and kept in a cold frame or greenhouse during the winter. As they are generally slow in rooting, the application of gentle bottom heat in the early spring months will greatly aid them in this process.

## MASSACHUSETTS NURSERYMEN'S ASSOCIATION.

It is refreshing to find the members of the Massachusetts Nurserymen's Association showing continued activity throughout the summer months. Mr. Julius Heurlin, the president, is a live wire and full of ideas. This season the Association has formed a policy of visiting various nurseries from time to time, and the results have been very much worth while. Many new ideas have been received, and a heartier spirit of co-operation has been established among the members.

Among the nurseries so far visited are the Framingham Nurseries and the Little Tree Farms in Framingham, the Eastern Nurseries in Hollis-ton, the Cherry Hill Nurseries in West Newbury, and the Boxford Nurseries in Boxford. The most recent trip was to the two nurseries last named, and proved a most enjoyable as well as profitable outing. The success of these outings or Field Days was shown by the fact that the last attendance was larger than on any previous occasion of the kind.

At the Cherry Hill Nurseries the visitors were warmly welcomed by George and Winthrop Thurlow, sons of the founder, and Mr. D. C. Stranger, the manager. Winthrop Thurlow is secretary of the association, and was one of the busiest men in the party.

Much has already been written in these pages about the Cherry Hill Nurseries, and it is not necessary to tell of the great blocks of Taxus, Andromedas, Maples, Purple Beeches, Magnolias, Spruces, Hemlocks, Rhododendrons and other tree stock, or to dwell upon the immense planting of peonies. The visitors, however, were much impressed with the care taken at this nursery to produce only peonies of the highest grade, and it is safe to say that many points were gained about the best way in which to handle peonies.

At the Boxford Nurseries, which have been made famous by Harlan P. Kelsey, a tremendous planting of evergreens, deciduous trees and shrubby plants was found. Many of the visitors had never seen so many seedlings as were to be found here, and were interested especially in the Rhododendrons, Kalmias, Andromedas and Leucothoes, plants of which Mr. Kelsey is especially proud, and which have made his nursery famous the country over. There are few nurseries in which so many valuable novelties are grown, and there are few nurserymen who know their plants so well as does Mr. Kelsey.

Special attention was paid the Carolina Hemlocks, of which there are two acres. This is one of the most desirable hemlocks in New England, growing just as well here as Tsuga canadensis. Among the Rhododendrons were large plants of Azalea Louise Hunnewell, first introduced by Supt. Hatfield, of the Hunnewell Estute in Wellesley, and Azalea Schlippenhachi, an early blooming species which the Arnold Arboretum has done much to popularize.

## BOSTON NOTES

Exaggerated reports were published in the Boston papers about the illness of Philip L. Carbone, the well known Boylston Street florist, who was overcome while walking in front of the Victoria Hotel a few days ago. It was stated that he had a cerebral hemorrhage, while as a matter of fact he simply suffered from an attack of indigestion, which quickly passed after he had been taken to a hospital. In a few days he was as well as ever, and is receiving congratulations on his quick restoration to health.

The Gardeners' and Florists' Club, of Boston, will hold its first meeting of the season in Horticultural Hall, September 20. An interesting program is being prepared for the coming winter. Reports from the picnic show that it was a decided financial success, leaving a substantial balance in the treasury.

Many changes are being made at the Flower Exchange in Winthrop Square, and within a few weeks several new faces will be found in the stalls there.

The Boston Box Co. reports difficulty in obtaining paper from the mills for making its boxes. It expects to start up business again in good shape when it gets the material with which to work.

# ADVERTISING AND SELLING

Once in a while a florist finds a new way of advertising, even in these modern times. Sometimes it happens, too, that the very simplicity of an advertisement carries it over. That is the case with the copy which appeared in an issue of a Knoxville, Tenn., paper, calling attention to Baum's Home of Flowers. This advertisement is simply a plain statement of the facts regarding the company itself, and the business which it carries on. It was calculated to focus the attention of the public on this enterprise, and to attract visitors to the company's bulb farm, which is one of the largest in the country. As a matter of fact, what the advertisement says is likely to be of interest to members of the trade, at least in other parts of the country, and for that reason, as well as illustrating the advertising methods of the Baums, it is published herewith:

Baum's Home of Flowers, Inc., was established in 1889 by Charles L. Baum. The officers of the firm are: Charles L. Baum, president; Roy L. Baum, vice-president; Karl P. Baum, secretary and treasurer; G. W. Chesney, store manager; Floyd F. Baum, greenhouse manager.

No sooner than Mr. Baum had gotten his first greenhouse structure to producing, he began to sell flowers and plants on the local curb market, and from that time to the present the business has continued to grow and increase that today their store rooms, corner Market and Clinch, is one of the show places of Knoxville.

The greenhouse plant 2½ acres under glass—and their 65-acre bulb farm one of the largest in the United States also share in public interest as local attractions to visitors and homefolks alike. At this farm, at Bearden, there is now growing 22 acres of gladiolas, as well as tulips, lilies, narcissus, cannas, etc., and have been the center of attraction of scores of visitors and all interested in floral development.

Baum's big business is built on honest advertising and their slogan: Service-Quality. The people of Knoxville have long since found out what this personal service at Baum's means to them and not alone in Knoxville—but 112 active, live Baum agents represent them in the great southeastern division.

Florists in Knoxville for nearly 34 years, a welcome always awaits you at Baum's Home of Flowers, Inc., corner Clinch and Market streets, Knoxville, Tenn., U. S. A.

Not a little has been written in Horticulture about the various methods by which florists and nurserymen in different parts of the country are taking advantage of their locations to reach the eyes of passing motorists. The Henry F. Michell Co., of Philadelphia, has suggested that florists have signs made up similar to the following:

"Stop here for that bouquet."
"Fresh flowers at all times."
"Flowers for all occasions."
"Say it with Flowers."

The biggest advertising agency in the country declares that it is a constant reiteration of any advertiser's name which makes it sink into the consciousness of buyers and eventually brings success. There is no cheaper or better advertisement than a nice, attractive sign with one's name and line of business painted thereon. When suspended above or alongside the greenhouse in a position where it will be seen from the road, it is certain to attract attention. A member of the Michell Co. says that on a recent automobile trip he noticed that 90 per cent of the florists located near a main road or directly on one did not display any signs above or alongside the greenhouses to indicate whose houses they are or even that they are open for business.

## EXPLOSIVES FOR NURSERYMEN

Nurserymen who have new land to prepare may be interested in an opportunity to obtain picric acid from the government at a low price. It seems that the war department has on hand a large surplus of this war explosive and is offering it through the state department of agriculture to any residents of the state who desire to use it, provided the orders amount to 44,000 pounds, which will make a carload. The picric acid will be shipped from Wisconsin, and will cost about seven cents a pound, plus the freight, which will probably not be over eight or ten cents, and perhaps considerably less.

Picric acid is said to be a reasonably safe form of explosive, and very effective in blasting out rocks and stumps and in making ditches. It is to be used like dynamite for surface work, except that a No. 8 cap, instead of a No. 6 cap, must be used. Electric connections are required when ditching is being done.

All the facts about how to get this explosive may be obtained from the Commissioner of Agriculture at Boston. I presume it is being offered through the agriculture departments in other states on the same terms.

## SEED LAW

Printed copies of Pennsylvania's new pure seed law, passed by the last session of the legislature, are now available for those persons interested in the law.

While the law became effective on July 1, yet the lack of the printed copies made the enforcement work difficult, as seed dealers generally, throughout the state, were not familiar with the various provisions.

The Bureau of Plant Industry of the Pennsylvania Department of Agriculture now has in operation a complete seed testing plant, testing not only for purity but also for germination. Dealers and others handling commercial seed may secure copies by writing for them.

# MICHELL'S FLOWER SEEDS

## Pansy Seed

**Michell's Giant Exhibition, Mixed.** A giant strain, which for size of bloom, heavy texture and varied colors and shades cannot be surpassed. ½ tr. pkt. 30c; 50c per tr. pkt.; ⅛ oz., $1.25; $2.00 per ¼ oz.; ½ oz., $7.00; $26.00 per ¼ lb.

**Giant Trimardeau, Mixed.** Large flowering and choice colors. Tr. pkt. 30c; $1.75 per oz.; ¼ lb., $8.00.

**Giant Sorts in Separate Colors**

| | Tr. pkt. | Oz. | ¼ lb. |
|---|---|---|---|

## FLOWERS FOR FUNERALS.

**A Remarkable Argument in Favor of This Fine Old Custom by a Newspaper Writer.**

Not infrequently a minister or some other prominent man launches a tirade against the use of flowers at funerals, claiming that this is an inexcusable waste of money. Perhaps it would be well for florists to keep on hand an article which appeared in Hearst's American recently as a well written refutation of this assertion. This article reads in part as follows:

"No flowers." I saw that in the paper the other day, in the announcement of the funeral of an old friend.

I'm sorry.

I would have liked to have sent a white rose to lay upon her heart—the tired heart, worn out with bearing the woes of others.

"No flowers"—and how she loved flowers when she was alive!

She had plenty of them, too. Her friends saw to that, and she saw to it herself. Always and always she managed somehow to wear a little knot of violets or pansies, or primroses or fragrant green mignonette, or blue forget-me-nots or something, just so it was a flower, and her simple sitting-room was always gay with blossoms. She didn't always know the names of all the new books, but she could tell you the names of every flower in her garden and every blossom in the fields.

What ferns she had in her little conservatory! Delicate, graceful things that she dug up in the woods herself and brought home and tended with the loving care a good mother gives a delicate child.

"No flowers"—I wonder why.

I love to see flowers in the room where some tired soul has lain down and gone asleep.

I love to see lilies at the foot of the last couch of a beautiful girl.

It is a beautiful custom to send flowers to those who have smiled their last good-by.

And it is such a relief to the sad hearts to see them.

Flowers! Give them to me while I am here to love and enjoy, dear friend of the heart, but, oh, when I am gone, come to the chamber of my last resting place with flowers, too!

I shall know—somewhere I shall know. And what you meant and could not say, what you regretted and dared not speak—I shall see and understand.

## BUYING TO MAKE BUSINESS

Harry I. Randall, the florist of Worcester, Mass., is a philosopher, if what he writes is any criterion. One of the Worcester papers recently published the following from his pen, and it makes good reading.

"If you want work, if you want dividends you must buy.

"What does buying mean in our business of selling flowers, or in your business or your work? Just this: you buy flowers and we put them in a box; that gives employment to the workers in the box factory; we wrap the box in paper; that helps to keep the paper mill going; we tie the package up with twine and that makes the wheels go round in the cordage works.

"If we can employ clerks the money we pay them goes partly for clothes and shoes; that makes work for the cotton and wool grower, the textile operative and tailor, the cattleman, the tanner and the shoemaker.

"When we grow flowers it requires fertilizers; that keeps the chemical works going. We use wire and steel and iron tools, the purchase of which helps to pay the dividends of the wire and steel companies. We use lumber, glass and paint and clay products, which helps to employ other workers and makes business for the railroads and work for the trainmen. We deliver flowers by automobile; that gives work to automobile mechanics and helps the oil company and their men.

"All business is so interwoven today that you must buy if you are to have prosperity. We believe that any business where the prices are right is entitled to urge your co-operation. Our prices are right and we have the finest and the most beautiful summer-time flowers ever grown, at pre-war prices.

"Use them to make your homes and lives pleasanter and better and give them to those you love while they can enjoy them."

There is food for thought here, isn't there?

# FIELD GROWN CARNATIONS

We can still supply New England grown stock.

Clean Plants --- Well Packed.

Write us for list of varieties we can supply.

## VINCAS

**Variegated**

**Fall Delivery**

| | 100 | 1000 |

## F. T. D. CONVENTION

### Canadian Florists Will Have a Warm Welcome for the Delegates

Plans are maturing for the F. T. D. convention at the King Edward Hotel, Toronto, on October 11, 12 and 13. Letters are being received from all over Canada containing assurances of co-operation with the Toronto executive in making it a real Canadian convention.

The first session will be devoted to welcoming the delegates to Canada through W. E. Groves, president of the Canadian Florists' and Gardeners' Association, and W. W. Gammage, London, general chairman for Canada of the Canadian convention committee.

Each visitor will be given a souvenir distinctly Canadian. They will be given a drive around the city and an opportunity to observe the flower shops, which will be specially decorated for the occasion.

The committee wishes it known that all sessions are open to any florist, whether a member or not, and the hope is expressed that there will be a big representation of Canadian florists at the convention.

The chairmen of committees were entertained at dinner by Mr. and Mrs. H. G. Dillemuth on August 23. After dinner a meeting was held when arrangements were made for a souvenir program.

Offices with staff have been opened at the Toronto Retail Florists' Club rooms, 12 Adelaide street west, and all correspondence will receive prompt attention.

The whole mezzanine floor at the King Edward has been reserved, including twenty rooms for exhibition purposes, rest rooms, ladies' parlor and convention rooms. The luncheons on Tuesday and Thursday, and the dinner on Wednesday evening will be held in the big new banquet hall.

## MOVING BIG TREES

The moving of big trees is being done with increased confidence, now that the methods to be used are well understood. Several firms are giving special attention to this work, and it sometimes happens that shipments are made for long distances. The Cherry Hill Nurseries of West Newbury, Mass., some time ago shipped a purple beech all the way to Detroit. This tree weighed fourteen tons, and filled a 40-foot box car. Other trees as large have been shipped to many other places throughout the country by this concern. The accompanying illustration shows the way in which the immense balls of earth are wrapped and the way in which the trees are handled. The owners of large estates are willing to pay thousands of dollars in order to have trees of many years' growth set out for the beautification of their grounds. Even municipalities occasionally spend much money in this way. Along one avenue in Chicago are hundreds of trees which were set out when well matured.

How Big Trees Are Moved

## NEW BOOKS

*Book of Gardens.* Condé Nast & Co., New York City, publishers. Price $5.00.

House and Garden's Book of Gardens is a handsome piece of work. It is made up of stories and articles selected from the magazine itself with great care by the editor, Mr. Richardson Wright. It abounds in beautiful pictures, and has a great amount of information which while designed primarily for the amateur will prove of interest to even the profession. The latter will find special pleasure in looking over the illustrations of well planned gardens in many parts of the country. A valuable feature of the book for the novice is a gardener's calendar running through the entire year. The book is very attractively bound in green with gilt trimmings.

*Pages from a Garden Notebook*, by Mrs. Francis King. Published by Charles Scribner's Sons, New York City. Price $3.00.

It is only necessary to announce a new book by Mrs. King to be sure of a large sale. Mrs. King's garden activities have been many and have extended through a wide range. She writes, therefore, with intelligence and discrimination and her pleasing, vigorous style is matched only by her knowledge of flowers. An unusual chapter on American seed catalogues has already been noted in Horticulture. Another chapter of special interest is devoted to the Arnold Arboretum, giving a terse and enthusiastic review of the work being done at that famous institution.

# RHODODENDRONS

**Hardy Hybrids Mixed Colors**

Grown in our Cape Cod Nurseries. We have them in the following sizes—12 to 15 in.; 15 to 18 in.; 18 to 24 in. Nice, clean, bushy plants.

# KALMIA LATIFOLIA

**(Mountain Laurel)**

Nice, bushy, nursery-grown plants, in the following sizes—12 to 15 in.; 15 to 18 in.; 18 to 24 in. We can quote you very attractive prices. This material is scarce and will be snapped up quickly.

## R. & J. Farquhar Company

**6 South Market Street, Boston, Mass.**

# RAMBLING OBSERVATIONS OF A ROVING GARDENER

What looks so forlorn as an empty window box. Perhaps it has been gay with petunias, geraniums or some other flowers all through the summer months. But when these blooms have been cut down by the autumn frosts it becomes a bare and cheerless object. Need it remain so through the wintter? By no means. There is no reason why it shouldn't be just as handsome throughout the winter season as in the summer, although in a different way. The solution lies in the use of evergreens. But to be successful with them it is necessary to have boxes that can be taken into the house at intervals or else to have the little evergreens stand in pots in the boxes.

Naturally there is excessive evaporation from evergreens occupying such a position. This must be compensated for in some way. If the plants can be taken into the house once a month and given a thorough soaking with water they will go through the winter in perfect condition, and be ready to set in the ground when spring comes. If the little trees are in pots it is best to set them in a pail of water or in the bath tub and leave them for several hours until the air has been driven out of the earth and the soil saturated with moisture. If large pots are used, water should also be applied to the top. This same practice, obviously, is required for larger trees which are kept in tubs or in pots on the porch or at the entrance of the house during the winter.

There are no better plants to use for outside boxes or tubs than the Blue Spruce, the White Spruce, Engelman's Spruce, Arborvitae and Ground Junipers. Arborvitae is especially desirable for houses which are built of cement, stucco or stone, as they give mass without formal lines. Their winter coloring, however, is bronze or purplish green, which while pleasing to many people with artistic tastes is not liked by everybody.

White Spruce is very decorative and is to be chosen where height and a certain degree of formality may be desired. Its silvery green color is very attractive. Ground Juniper is sometimes used for fillers. For that matter, Ground Juniper alone makes an ornamental box, its soft lacy effect and bluish tinge proving highly satisfactory. This is a plant to be chosen especially for houses which require low, horizontal effects. Sometimes Ground Junipers and dwarf Mountain Pines are used together, and a large box may have a combination of Arborvitae, White Spruce and Junipers, giving variety in both form and color.

While the Arborvitae and Red Cedar turn bronze in color if kept out of doors, they keep their summer green when used as living decorations within the house. These two little trees and others, like the Blue Spruce and the Norway Spruce, grow nicely when potted up and taken into the house. They are much easier to handle than ordinary house plants, for they can be kept in cold, draughty corners or near the windows without danger. Sometimes they are used to advantage as a background for flowering plants. If given the right treatment these evergreens wintered indoors will be in good condition for planting out when spring comes. Indeed, there is no reason why they shouldn't be used indoors for several consecutive seasons, having a place in the garden during the summer.

The treatment to be given them must be just the reverse of that described for evergreens kept outside. Once a month, and preferably once in two weeks, they should be carried out of doors and allowed to stand in freezing temperature for half a day. The explanation of this treatment lies in the fact that, when the little trees are kept indoors, red spiders may naturally develop in the soil, just as they do outside in the spring. If allowed their own way they may gradually work into the foliage, but if the plants are given the outdoor treatment mentioned, they will be killed by the cold and no trouble will be experienced with them. In fact, after February it will be no longer necessary to set the plants outside until spring.

As the days begin to lengthen the little trees will start making their new growth. This is the time when they look their handsomest, and if they are symmetrical, choice specimens (and no other kind is suitable for growing indoors) they will excite the admiration of all who see them. Care must be taken not to set the plants out of doors too early, for a severe frost might damage this new growth, causing it to turn brown.

Increasing interest is being shown in evergreens as house decorations, and this extends even to the Christmas tree. In many homes the living Christmas tree is now preferred to any other kind. It is bought early in the fall, kept growing through the winter, and given a favored location in the garden when the spring comes. Sometimes a Christmas tree is named for each child in the household. There are few boys and girls who will not take special joy and pride in a tree which has been planted for them and keeps pace with them as they grow to maturity.

Window Boxes Planted For Winter

## HOLLOW STEM OF PEONIES

### Winthrop Thurlow Tells How to Deal With It—Treatment for Wilt Disease

Although peonies are not greatly subject to disease or the attacks of plant pests, more or less difficulty with "Hollow stem," so called, is found. In discussing this condition, Mr. Winthrop Thurlow, of the Cherry Hill Nurseries, said recently:

"When a peony is divided and planted out it should make a lot of new growth; the old root which supported the buds the first year will practically die away and entirely new roots be formed. The buds come up close together in a single crown, and the roots spread off in all directions. As the plant is left in the ground without being disturbed the buds for each succeeding year form to a great extent on the outside of the stems. Thus the stems gradually come from a wider and wider circle, somewhat as those of the German iris do, only not in such a marked degree. The growth of the root also slows up, and not so much is made, but the strength is put into the blossoms, which makes them finer every year.

"Now there is apt to develop in an old plant a place where the buds have ceased to form. This tissue dies out, and in many cases the plant gradually comes to have a dead and later a somewhat decayed portion in the center. Why we speak of it as a condition is that it is a natural growth of the plant, but may be held back or hastened a good deal by the fertilizer used. The more manure is used on a plant the most the tissues become soft and give lodgment to any fungi which may be in the soil, and this in turn gives a lodging place for wire worms, etc.

"We fertilize our peonies and believe that in most cases peonies should be fertilized by using a larger percentage of potash, which will of course act on the roots rather than on the flowers; and then in the spring a quick acting nitrogenous fertilizer to act as a tonic. There is nothing the matter with peonies having this old crown except as to division, when they do not look as well, and of course do not divide as well to sell.

"There is another condition which the plant may get, called botrytis, which shows its effects in a wilting of the stem usually about June, and if these stems are not cut off and lime scattered around the plants, the fungus will eventually work down into the plant and kill out the bud which sent up the stem. This is sometimes called the 'Wilt Disease' or 'Black Rot,' and is caused almost altogether by overfeeding with manure, allowing the fungi to enter through the weakened cellular tissue. We have sometimes seen it start where a bud is frostbitten, and the fungus will work down a few inches. We have never had any bad case of this 'Wilt Disease,' and consider that it is due to the way we have fertilized our peonies. We believe that the crown should be replenished every five or six years if the peonies are planted out permanently. The old earth may be scraped away down as far as the roots and new soil put in. One of the best fertilizers is ground bone, and some fertilizer containing potash. Of course this varies somewhat according to the soil in different parts of the country. We can use a great deal of lime on our peonies, but farther west they do not need as much. The best cure for either of these conditions is to cut the old part away down to clean tissue and dust with land plaster and plant in fresh soil."

## DAHLIAS

Of all the lectures given this summer in Horticultural Hall the one most looked forward to by Hillcrest is to be by Mr. J. K. Alexander, the Dahlia King, of East Bridgewater, Massachusetts, on the tenth and eleventh of September, Saturday and Sunday afternoons, at three o'clock. For we want to know how to bring our dahlias to perfection.

Three years ago our dahlias were beautiful. The next year they bloomed early then frizzled out. Last year although we had lightened our soil with coal ashes our plants produced leaves but few blossoms. This year the blossoms are larger, but we are still troubled with the lacefly. We need help in growing these beautiful flowers.

There are now so many varieties of dahlias, from the pretty mignon with which we had success last season, to the long petaled, richly colored cactus and peony flowering types. There are few flowers which excel the dahlia in its wealth of color, and the improved varieties give much beauty of form.

We hope that Mr. Alexander will tell us about the soil best suited to them, the care we must take in disbudding them, and of how to prevent their distorted bloom. Some people have given up growing dahlias away from the seashore, thinking that they need its damp, salty atmosphere, but in other country gardens we see them gayly nodding to us from the top of their tall stalks.

**GIANT PANSY SEED**

No. 10. Kenilworth Giant Exhibition
No. 12. Kenilworth Giant Prize
Each sort: 1000 seeds, 50c; 1-8 oz., $1.75; ¼ oz., $2.50; oz., $10.00.
No. 22. Kenilworth Mixture
No. 30. Blotched
No. 32. Parisian
No. 34. Bronze Shades
No. 36. Triumph of Giants
No. 70. Orchid-flowered
Price of the preceding 6 sorts: 1000 seeds, 35c; 1-8 oz., 90c; ¼ oz., $1.65; oz., $6.00.
No. 24. Kenilworth Show
No. 28. Masterpiece
1000 seeds, 40c; 1-8 oz., $1.10; ¼ oz., $2.00; ½ oz., $3.75; oz., $7.50.
Giant Trimardeau in mixture or separate colors
1000 seeds, 30c; 4 pkts., $1.00; ¼ oz., $1.30; oz., $5.00.
Early Flowering or Winter Blooming Giant Pansies.
1000 seeds, 40c; 1-8 oz., $1.10; ¼ oz., $2.00; oz., $7.50.

**CHAS. FROST**
KENILWORTH, N. J.

Where others have succeeded we do not want to fail, so we are looking forward with interest to Mr. Alexander's talk on the cultivation of the dahlia before the Massachusetts Horticultural Society on Saturday and Sunday afternoons, September tenth and eleventh, at three o'clock. We are going to the hall prepared to ask many questions which we hope that Mr. Alexander or others interested in the growing of this beautiful flower will answer.

M. R. CASE,
Hillcrest Gardens, Weston,
August 29, 1921.

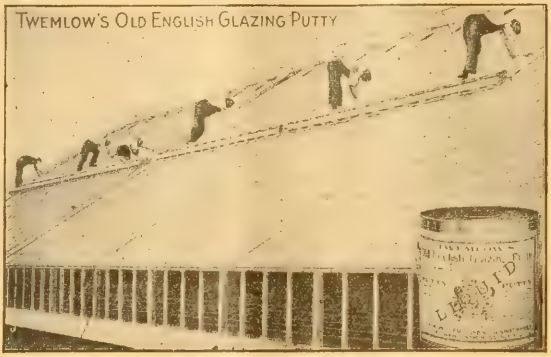
## CHANGES AMONG GARDENERS.

William Dickson has become gardener to J. C. Bryden, Brooklandville, Md.

George Baker, at one time superintendent of the George Eastman estate at Rochester, New York, has taken a similar position on the estate of Spencer Kellogg, at Derby, N. Y.

J. E. Shaw has become head gardener of the Dominion Experimental Station, at Lacombe, Alta., Canada.

Carl Peterson has been made gardener in charge of the vegetable garden on the Straus estate, Red Bank, N. J.



Alfred Woodger has become gardener on the Levy estate, Larchmont, New York.

George Wynes sis now gardener to Mrs. C. A. Congdon at Duluth, Minn.

## IT PAYS TO ADVERTISE

As we are all sold out on the field-grown plants will you please discontinue our ad in your paper, and oblige,

Very truly yours,
W. D. HOWARD,
Medford, Mass.

## SAVED THE POETS' NARCISSUS.

### An Interesting Bit of History Concerning the Late John K. M. L. Farquhar

In the August number of the Garden Magazine the editor, Mr. Leonard Barron, relates a very interesting bit of history which reflects to the credit of the late Mr. John K. M. L. Farquhar Mr. Barron saysrmlm?bNa IMEevrfw of Boston. Mr. Barron says:

"John Farquhar was at the Chiswick Gardens of the Royal Horticultural Society some forty years ago, as assistant to my father, A. F. Barron, who was then Superintendent. The place was rich in a vast variety of plants of all kinds that had been brought together from all parts of the earth for study and comparison, for the R. H. S. had been a great pioneer in plant knowledge. Fortune's pioneer Chinese collections were distributed from there and I myself recall some of the originals standing there a few years ago. They are all gone now, every last trace of them, for I went over the spot this summer. There were also many interesting monuments of other collectors such as the old original Wisteria, all of which are gone—the Wisteria covered a whole house side. It was ruthlessly cut down even though the wall on which it grew still stands as part of a good garden!

"But to my story of the True Poets' Narcissus: Peter Barr was reviving the Daffodil and collecting obscure or 'lost' varieties, and it is to his great enthusiasm at that time we owe our present-day worship. Naturally he culled over the collections at Chiswick, and had exhausted them, as he thought. John Farquhar had observed an obscure small clump of Narcissus that seemed backward, but, keeping it under observation, at last saw a few flowers open. Calling my father's attention to its lateness, he was advised to take a bloom to Mr. Barr, who at once, and with characteristic enthusiasm, recognized the then considered lost True Poets' Narcissus, N. poeticus poetarum. Thus was this splendid form recovered to our gardens, and I lay this tribute of honor to a man whose enthusiasm for gardening in general in any form has really done much for us."

## NEWS NOTES.

Ralph H. Messenger of Springfield, Mass., who recently bought the Dalton property on Linden street, is planning to erect a greenhouse 100x25 feet.

William Allen Vining, a retired florist of Hingham, Mass., died recently at the age of 81 years.

The Blatchley Flower Shop, of Meriden, Conn., now being erected, will be a very attractive establishment, the front being made of tapestry brick. A greenhouse will comprise the second story and roof. The store will have a red quarry tiled floor, and a stairway at the rear will lead to the greenhouse above. The greenhouse material is supplied by Lord & Burnham.

J. A. Cleary has opened the Hillside Flower Shop at Elmira, N. Y. Mr. Cleary has put up greenhouses and will conduct a wholesale and retail flower business.

H. M. Totman Co., Inc., has leased a store at White River Junction, Vt., for a flower shop to be called the Vermont Cut Flower Exchange. It will be opened about October 20.

## A. P. DEWAR BACK FROM EUROPE

The many friends of Mr. Alexander P. Dewar, of the R. & J. Farquhar Co., of Boston, Mass., are glad to welcome him back from his trip to Europe, although regretting that he was obliged to return much earlier than he had expected, owing to the death of Mr. John K. M. L. Farquhar. Mr. Dewar reports that he found conditions in Europe very much as they are in this country, with prices high. He remarked especially on the care with which carnations are handled at Covent Garden, saying that they are re-shipped in the boxes in which they are received from the growers, not being taken out. He found the blue Statice being used in great quantities by the retail trade, largely for the making of wreaths.

Although he hadn't much time in southern France, he learned that French bulbs were none too plentiful, and prices rather high. He found much complaint even in Europe against the high prices being charged for Holland bulbs.

## THE HARDING DAHLIA.

According to the Boston Herald, Mr. J. K. Alexander, the well known dahlia expert of East Bridgewater, Mass., has raised a new dahlia, which he expects to name for President Harding, providing the president gives permission. This specimen, as well as a thousand other blossoms from the Alexander Farm, is to be seen at the Dahlia Show in Horticultural Hall beginning today.

## TREES OF INDIANA.

The new edition of Deam's "Trees of Indiana," published by the Department of Conservation of that state, is a remarkably complete and handsome volume illustrated with 137 plates which are photographic reproductions of the foliage, flowers and fruits of many species. Mr. Deam, who is State Forester, has had an unusual opportunity to become familiar with the tree flora of Indiana, and his comments, besides being based on accurate observations, are interestingly phrased so that the book is by no means a dry or abstract volume. He says, for example, of the Hickories, of which he recognizes eight species in Indiana, that they are very slow growing trees which develop a long tap root and consequently are hard to transplant. He recommends that germinated nuts and not seedlings be planted. He says of the Sassafras tree, "It deserves more consideration than it has received as a shade and ornamental tree. The autumnal coloring of its foliage is scarcely surpassed by any tree, and it is free from injurious insect pests. It adapts itself to almost all kinds of soils and grows rapidly."

Mr. Deam also says, however, that the Sassafras tree is difficult to transplant, which is one reason, no doubt, why it has not been taken up more generally by nurserymen in spite of its good qualities.

Mr. Deam argues against the incessant changes of nomenclature which have become somewhat of a nuisance in this country.

Altogether it is a very worth while book, and of value to residents of other states as well as of Indiana.

Says Sam: Nobody knows all there is to know about growing flowers, except maybe these fat fellows you hear talking in smoking cars.

---

**Outside Competition** With the constantly growing number of people raising gladioli, dahlias, asters and similar flowers in a more or less large way, it is inevitable that many of these flowers should be put upon the market through some avenue or other. In a great many instances they do not pass through the florists' hands. In fact, in some cities there is very decided competition between the florists and growers who are little more than amateurs. The situation is growing more obvious this season, and florists are somewhat concerned to know what the end will be.

In not a few instances the small growers, who are raising these flowers as a side line, state frankly that they expect to get all the trade they can by underselling the florists. Occasionally a commercial grower takes the same attitude, which attitude is pretty well epitomized by an article which appears in the Flower Grower for September, and which is signed by Benjamin C. Auten. The article is given below, and it will be of interest to have the comments of those in the trade.

"The public does not exist for the sake of the bulb growers, flower growers and florists, but the bulb and flower growers and the florists are in their lines of business for the sake of the public whom they serve.

"Whether or not I grow my bulbs for the sake of the bulbs, if I have a crop of flowers beyond my personal use for flowers, I have no right to withhold that crop of flowers from the public which wants it and is willing to pay a price to me, beyond my cost of distributing. Whether this competes disastrously with the business of the florist is none of my concern. My concern is to run my own business. If the florist wants two dollars a dozen for his flowers, and I can furnish mine for a dollar, I am serving the public better than he is, and he must take the consequences. People in all other lines of business do, and the florist is no better than anyone else, and should not ask favors not expected by others.

"To be sure, the florist gives an expensive service, and must secure a price commensurate with the service. His service is in more or less demand at all times of the year; he knows about what the natural demand for his business is, and should govern his dealings accordingly.

"It is true, too, that the demand for his services are limited; he could not sell all the flower crop even if no one else sold any. Why should he imagine, then, that a dime or a dollar received for flowers by someone not a florist is a dime or a dollar stolen, criminally taken, right out of his pocket? Also, when I am cutting one or two thousand blooms a day, why should a florist, when he buys five dozen a day, imagine he has full right to control my price on the other nine hundred forty or nineteen hundred forty flowers I sell every day?

"The idea is past understanding; yet he does imagine it. When I sell him his flowers, I sell him the flowers and I sell him absolutely nothing else. I do not sell him a guarantee of a market for those flowers. If he hasn't a market for them, he should not buy them.

"This is a free country, too, and one person has just the same right to raise and grow flowers that any other person has. If he sells his goods at a price below his cost of production, he will before long give up the practice. If he sells at a low price and makes headway at it, other growers must match his tune or quit whistling. It is the same in every business.

"The scheme to enter into arrangements not to sell flowers, and to blacklist those not joining the plan, as well as all other schemes of wire-pulling, are liable to have an effect before long far different from the effect intended. In the long run, to meet all competition openly, to buy where the best bargain can be made, to acknowledge every one his rights, will work out to the best advantage of all."

Mr. Auten has thus laid his cards on the table; what will the next play be?

---

**Prof Shaw's System** A writer for our esteemed contemporary, Florists' Exchange, is very skeptical about the announcement made in these columns several weeks ago regarding the system worked out by Professor Shaw, of the Massachusetts Agricultural College at Amherst, for identifying nursery trees by their leaves. This writer remarked that he had heard nothing about the meeting at which Professor Shaw was expected to give the results of his experiments, and gently insinuated that the professor failed to come to time.

Now, as a matter of fact, the meeting was held, and Professor Shaw did appear. He did explain his system, and what is more, he demonstrated it before a large and greatly interested audience. Leaves from scores of different fruit trees were brought to the meeting and presented to the professor, who named them one after another quickly and with but little hesitation. His score was almost a hundred per cent perfect, for only in a very few cases did he fail to identify the leaves properly. He was working under difficulties, too, because for the most part the leaves had been carried about for some time and had lost their freshness.

# "Montgomery's Priscilla"

That's the name of the new pink rose! The name will be "Priscilla" probably after the public has had it a while, but we have had to add the prefix to cover the rules of nomenclature.

In order to get someone who knows more about roses than we do to give an unbiased, honest opinion on the merits of this rose, we have placed 12 plants of it with each of the following rose growers:

E. G. HILL CO., Richmond, Ind.
DAILLEDOUZE BROS., Brooklyn, N. Y.
ALBERT H. AMLING CO., Maywood, Ill.
DUCKHAM-PIERSON CO., Madison, N. J.
ROWAYTON GREENHOUSES, Rowayton, Conn.
MILLER FLORAL CO., Farmington, Utah
WELLWORTH FARM GREENHOUSES, Downers Grove, Ill.
A. S. BURNS, JR., Spring Valley, N. Y.
ROBT. SIMPSON, Clifton, N. J.
CHAS. H. TOTTY CO., Madison, N. J.
NOE-RUZICKA CO., Madison, N. J.
WM. H. ELLIOTT CO., Madbury, N. H.
ANTHONY RUZICKA, Madison, N. J.
W. J. PILCHER, Kirkwood, Mo.
JOS. HEACOCK CO., Roeloffs, Pa.
WENDLAND & KEIMEL, Elmhurst, Ill.
JOY FLORAL CO., Nashville, Tenn.
ROBERTS ROSE CO., Denver, Colo.
GEO. C. WEILAND, Evanston, Ill.
LAKEVIEW ROSE GARDENS, Jamestown, N. Y.
BASSETT & WASHBURN, Hinsdale, Ill.
HARRY O. MAY, Summit, N. J.
F. R. PIERSON, Tarrytown, N. Y.
L. B. CODDINGTON, Murray Hill, N. J.
JOS. H. HILL CO., Richmond, Ind.
STEPHEN MORTENSEN, Southampton, Pa.

Ask them about it, if you will, at any time. They have our permission to tell the truth. We are going to let this rose sell itself! We shall be simply order takers.

A. N. PIERSON, Inc. Cromwell, Conn.

### A TREE AND SHRUB SELLING CAMPAIGN.

A unique campaign has been planned by the Chamber of Commerce in Bridgeport, Conn., for Sept. 14, 15 and 16. A special drive is to be made for the selling of shrubs and trees, and it is expected that $5,000 worth will be disposed of. Last year the Chamber sold a thousand trees and 5,000 shrubs. Special booths will be erected in different stores about town, and women will undertake the task of beautifying Bridgeport by receiving orders for trees, shrubs and vines. Arrangements have even been made for furnishing loam when required for proper planting.

To The Trade—

Thos. F. Galvin, himself, will give your orders his personal attention at his son's store.

**Thomas F. Galvin, Jr.**
226 DEVONSHIRE STREET
BOSTON, MASS.

## George Watson's Corner

"You in your small corner and me in mine."

The rose growers on being asked if they were willing to come back to pre-war prices said, "Yes, of course." But the coal barons on whom we depend for our winter fuel must come back first, also the laborers at two who now want six.

The acme of human delight, according to the poets of all ages, is summed up in the expression:—

"Wine, Women and Song"

But something more than these are necessary at every festive gathering, according to the decorative artists in the Pennock Wholesale Flower Market. They insist that to make any affair of that kind perfect, there must also be, Pennock Quality—

"Flowers, Ribbons and Baskets"

We pass this thought along to the gentlemen who do the decorating. Perhaps, now that the liquid part of the ancient institution is wiped out, there is all the more room for the floral artist and his wares, that cater with fragrance and beauty to the eye and the nose, even if the tongue has to stick to the roof of the mouth. But we have our doubts.

If somebody died and left you a million what is the first thing you would do? Of course there's many ways of spending a million but what would you yourself personally do if you had that million! Miss Marey said she'd have to think it over a while before she could answer. Eddy Degore did not hesitate a moment. He'd buy the finest race horse in the country and beat them all to a standstill, and win all their money. The Dago boy who shaves me made whirligigs with his arms! he'd do back to sunny Italy and live like a king. The colored boy who brushed me off had a different idea. Stutz-Stutzberberger -- Stukolootski -- Automobile. That's as near as I can put his stutterings of the big Limousine into type. But he saw himself scattering the mob of presidents, mayors and policemen at Broad and Chestnut Street all right.

Miss Bauer and Miss Reed and some of the other charming ladies in the office came back with the counter question, "What would you do?" Who, me? Well, I began to talk about the Bible, and King David and King Soloman and things —these old men were allowed many wives, etc., before they wrote the psalms and the proverbs—and then they blew up! And shoved me out of the office! What do you know about that! We read in the papers about folks getting into trouble who have real money. But if you only start the thing on an imaginary basis you can stir up a little excitement before you get through.

**A. L. MILLER, Jamaica, N. Y.**

So much for August. The first of September will be the last of August, according to my German friend that I meet sometimes on Ranstead St. But September is here now and we'd better get busy and make a few dollars. Now for the September Drive.

An excellent sample of the "Pomfret Purity" the new White Gladiolus, was on exhibition at the Pennock Flower Market and excited considerable favorable attention. This exhibit came from Cincinnati August 25th.

Edwin J. Fancourt, of the S. S. Pennock Co., took his family to Atlantic City on the 2nd inst. for a month of the sea breezes. The boss will get the week-ends; but even that is better than nothing.

Our old friend, Theodore Meskers, who made the boys sit up and take notice while he was located at McKinley (near Jenkintown) is now proprietor of the Colonial Greenhouses at Ocean Heights, and is doing a rushing business among the elite of that vicinity—which includes Atlantic City and nearby points. We miss his old flivver in front of the flower markets in Philadelphia, but so long as he is well and prospering, our hearts go with him.

Tom Holland, one of our well known private gardeners, is about again after a siege in the hospital. He says the operation was a big success, and that he feels again as fit as he ever did at his best.

Philip Frend, of Michell's, made a special journey out to Elkins Park on the 1st inst. with six fine specimens of their new dahlia, "Mrs. George W. Elkins." It is an autumn colored flower of the decorative type, and of immense size, about a foot across, if you listen long enough to Philip. The recipient was highly delighted and called a special party of her friends for dinner the following evening to celebrate the baptism.

C. V. Liggitt is enjoying a brief vacation at Atlantic City. In the meantime the home forces in the Bulletin Building are being ably managed and kept on the jump by that queen of business women, Miss Freund. She reports everything going along nicely, and the orders rolling in in good live-wire fashion.

Hugo Niessen reports the Philadelphia Flower market the past two weeks the dullest in four years at the same period. A vast amount of stock to dispose of and nowhere to put it. Other wholesalers corroborate this. The supply has been much ahead of the demand and a great deal has re-

## DWARF SHRUB GARDEN.

The Arboretum two years ago established in its propagating department at the corner of Centre and Prince streets a collection of dwarf shrubs planted in frames and protected from the heat of the summer sun by lath shades raised high enough to permit a person to walk under them and to insure a free circulation of air. In these frames it has been found possible to grow successfully a number of shrubs which require partial shade and daily summer watering, and are too small and often too delicate to be properly protected in the open ground in a public garden of the size and character of the Arboretum.

In this collection are now established such difficult plants as Salix herbacea and S. uva-ursi, Linnaea borealis, Epigaea repens, Cassiope hypnoides, Loiseleuria procumbens, Kalmia microphylla, Rhododendron indicum, Vaccinium praestans, and some three hundred other interesting dwarf shrubs which have never before been successfully cultivated in the Arboretum. In this collection it is now believed possible to maintain Erica tetralix, E. vagaris and possibly other dwarf species, and here will probably grow the so-called Irish Heath (Dabboecia) which has not yet proved hardy here.—Arnold Arboretum Bulletin.

Mrs. Mary A. Miller, of Moundsville, W. Va., near Wheeling, has moved her flower shop to 913 Second street. Mrs. Miller is one of the veterans of the floral business in the Ohio Valley, and has spent nearly her entire life in building up the business of which she is now the head. Associated with her are her two sons, B. F. and F. E. Miller.

## FERN SHOW IN BOSTON

**It is to be Held Sept. 22-26 and will be an Unusual Event**

It is already evident that the Fern Show to be held in Horticultural Hall, Boston, September 22-26, will be the greatest event of the kind ever staged in this country. Indeed, it is probable that no such show has ever been held in any country. Mr. A. C. Burrage, president of the Society, has engaged the entire lecture hall for his exhibit, which will be one of the biggest features of the show. In addition to showing tropical ferns and similar plants, Mr. Burrage will have undoubtedly a remarkable display of tropical orchids. This exhibit will be of interest to everybody in the trade, as well as to the general public. In fact, the whole show will be one which the trade cannot afford to miss, as the exhibitors will be in a large measure professional growers.

Probably the biggest display, next to that of Mr. Burrage, will be that of W. A. Manda, So. Orange, N. J. Mr. Manda will have a carload of plants, including tree ferns, cacti, Bromeliads, Staghorn ferns and 54 varieties of the Boston fern.

Another big exhibit will be that of Robert Craig, Philadelphia, famous the country over as a grower of ornamental plants. He will have a collection of Crotons, Dracenas and the like.

A noteworthy feature of the exhibit to be made by Henry A. Dreer, of Philadelphia, will be a new Japanese fern, many specimens of which will be staged.

Wollrath & Sons, of Waltham, have arranged to enter nine classes, and will have a general display besides. Another famous fern grower who is expected to show is F. R. Pierson, of Tarrytown, N. Y., who has done as much as any man to popularize the fern in America.

Altogether everything points to a remarkable show, and one which for many reasons will make a strong appeal to the trade. It is expected, therefore, that visitors will come from many states.

## YELLOW PEONIES

There is always a call for yellow peonies, although the number of such peonies is small. The Cherry Hill Nurseries recently answered a question about such peonies as follows:

Paeonia Lutea is a small yellow flower, about two inches across, of just about the shade of a buttercup. Of the yellow Chinese peonies, the best that we have seen so far is Primevere. Laura Dessert is given credit for being a very fine yellow, but we have not seen it on large enough plants to determine yet its intrinsic merit. The next best is Princess Irene, which has rather light guard petals and sulphur yellow center, with an occasional trace of carmine.

## NEWS NOTES

A new company, known as the Journey's End Corporation, of Danbury, Conn., has been organized, with a capital of $500,000, and announces a very ambitious program, including the raising of flowers, plants and trees. The incorporators are Colin M. Ingersoll, Walter N. Maguire and Hannah M. Nelson, all of Stamford.

## THE F. T. D. A. CONVENTION

The annual convention of the F. T. D. A. will be held in Toronto, Ont., October 11, 12 and 13. A reduced rate has been granted on all the Grand Trunk lines, and will be under a certificate plan.

### GREENHOUSE NOZZLE

The new Manaway greenhouse nozzle is a decided advance over any greenhouse nozzle heretofore made. By its peculiar construction the side spray is thrown out which applies the water evenly from the pipe outward. Our long-throw nozzles cover a space up to 18 feet from the pipe. We can supply nozzles that will cover any space desired. If you will advise us under what pressure your system operates and the width of space you desire to cover, we will mail without charge a sample nozzle. C. W. SKINNER, Newfield, N. J.

### END NOZZLE

Every one who is using the Manaway System without the end nozzles can now fit their lines with our new 3-outlet end nozzles which take the place of not only the regular nozzle but also furnish 2 streams, one 4 and the other 8 foot out of true. One of these nozzles placed at the beginning or end of the line has the effect of lengthening the line 8 feet at each end. These nozzles can also be used in other systems which use a large nozzle. The price is 15c each, postpaid. C. W. SKINNER, Newfield, N. J.

K. outside), 1-16 oz. 65c; ⅛ oz. $1.00; ¼ oz. $1.75; ½ oz. $3.25; 1 oz. $6.00; 2 ozs. $10.50; 4 ozs. $20. STEELE'S MASTODON PRIVATE STOCK MIXED—1-16 oz. 65c; ⅛ oz. 75c; ¼ oz. $1.50; ½ oz. $2.75; 1 oz. $5.00; 3 ozs. $14.00; 4 ozs. $18.00.
Steele's Pansy Gardens, Portland, Oregon.

### LABELS

Wood labels for nurserymen and florists. THE BENJAMIN CHASE CO., Derry Village, N. H.

SMILAX—Strong 2¼-in. $3.00 per 100. Cash. H. C. BLANEY, 153 Humphrey Street, Swampscott, Mass.

**BOUVARDIA**—Strong, bushy plants from bench, replanted from pots. Big ball of roots. Bouvardia Humboldtii, white; Grandiflora, white, $20 per 100; Mrs. Chas. E. Hughes, light pink and Rosa, dark pink, $15 per 100. No order accepted for less than 50 plants. Cash with order.
John W. Foote, Florist, Reading, Mass.

WRITE for our new wholesale list of Peonies.
FRANKLIN NURSERY
Richfield Station, Minneapolis, Minn.

**WE OFFER** to the trade Berberis seedlings for lining out. Rose stock, Apple, 1-yr. Asparagus, 1-yr. Grape, 1- and 2-yr. Peaches. Few Pears, other stock. Ask for prices
Rockfall Nursery Co., Rockfall, Conn.

**PEONIES**—Strong, 3 to 5-eye divisions. Couronne d'Or at 25c, Delachei grandiflora at 25c, Duchesse de Nemours at 25c, Edulis superba at 25c, Felix Crousse at 45c, Festiva maxima at 25c, Grandiflora rosea at 30c, Madame Calot at 30c, Madame de Verneville at 25c, Prince Imperial at 25c. No order for less than $5. Packing free for cash with order. Carl H. H. Baumann, 1107-09 Richmont St., Scranton, Pa.

AMPELOPSIS VETCHEII
Boston Ivy
I have a large stock of fine plants for the coming season of 1-, 2- and 3-year old. Can supply all demand at reasonable prices with stock that will please. Send your orders as early as possible. Prices given on application.
Charles Black, Hightstown, N. J.

### GLADIOLUS AND NARCISSUS

If you want a bargain in a large lot of mixed gladiolus and mixed narcissus we will be glad to have your inquiries. Wishing to devote time and space to named varieties we will sell our mixed stock cheap.
Tait Bros. Company, Brunswick, Georgia.

**TRUCK FOR SALE**—Special built florists' body, surrounded by a dead air space, frost proof, on a powerful Stearns Knight touring car, 1916 model. Equipped with a full set of almost new Cord tires, and a new spare. In good running order. Any reasonable offer considered. Apply to JAMES MARLBOROUGH, Topsfield, Mass. Tel. Topsfield 47.

**FRYER'S NEW IRIS**—Write for my trade list and new descriptive catalogue just issued; have greatly reduced the price of my seedlings. Did you ever see a weeping form of the Colorado Blue Spruce? I have one and it is 30 ft. high. It will be shown in my new catalogue; also a Rhododendron that has bloomed for eight years.
Willis E. Fryer, Mantorville, Minn.

**E. P. TRAGARD**, Gladioli Specialist, offers unusually fine, healthy, home-grown bulbs. All sizes, true to name. Also mixture. List on request. Retail-Wholesale. Maple Brook Gladiolus Gardens, West st., Mansfield, Mass.

### STEVIA AND GENISTAS

Extra fine Stevia 3-in. pots, $8.00 per 100; Cash.
Extra fine Genistas, 3-in. pots, $15.00 per 100; Cash.
H. C. Blaney, 153 Humphrey St., Swampscott, Mass.

**FOR SALE**
**GREENHOUSE**
**Good Business, Est. 25 Years**
Also 12-room modern house and stable, in fine condition. About 2¾ acres of land. High location. For particulars address E. S. RUMREY, 399 Pleasant St., Stoughton, Mass.

## Principles and Practice of Pruning

By M. G. KAINS

Few practices in the handling of plants, especially fruit bearing plants, attract so much interest as do those of pruning. The accumulation of new knowledge has become very considerable, especially in the last decade, but it is necessarily so scattered that very few growers have access to it, hence the demand for a book as this, which shall present the really important features of these investigations as well as set forth the fundamental principles based upon the laws of plant growth. This volume is lavishly illustrated mainly by actual photographs of specimens which show good and bad practices.

After a few pages of introduction the author discusses Plant Physiology as related to pruning. A chapter takes up the Philosophy of Pruning, itself, a very interesting subject. Then follows a classification and clear discussion of Buds, very fully illustrated from life. How Wounds Heal is an exceedingly interesting chapter, as are also those on Prevention and Repair of Mechanical Injuries, Pruning Nursery Stock, Young Trees, Mature Trees and Odd Methods of Pruning and Training, Rejuvenating Neglected Trees and Practical Tree Surgery. There are 400 pages in all.

Price $2.50

739 Boylston Street Boston, Mass.

## Plant Propagation, Greenhouse and Nursery Practice

By M. G. KAINS

We have had many inquiries from time to time for a reliable and up-to-date book on plant propagation, but were always at a loss to find any publication that we could recommend. The subject has been dealt with in fragmentary manner only in books that have come to our no ice. So it is well that this new work has been issued, especially as it is both comprehensive and practical, and it should meet with a ready sale among plantsmen, nurserymen and gardeners. There are nineteen chapters covering in detail topics of germination and longevity of seeds, propagating by buds, layering, cuttings, grafting, etc., fruit tree stocks, scions, etc., and there are eight pages of condensed cultural instructions in tabulated form, covering annuals and perennials from seed, woody plants, evergreens, vines, bulbs and tubers, greenhouse and house plants, ferns, palms, water plants, orchids and cacti. The illustrations are numerous, comprising 213 figures and halftone plates. There are 322 pages well bound and on heavy paper, teeming with helpful information. It is a book which no cultivator can afford to do without. It is worth many times its price. Copies can be supplied from the office of HORTICULTURE at publisher's price, $2.25.

739 Boylston Street Boston, Mass.

*Every Reader of "Horticulture" Needs*

## DR. L. H. BAILEY'S
# Standard Cyclopedia of Horticulture

Six large quarto volumes. More than 3,600 pages. 24 full page exquisite color plates. 96 beautiful full page halftones. More than 4,000 text engravings. 500 Collaborators. Approximately 4,000 genera, 20,000 species and 40,000 plant names.

IMPORTANT NEW FEATURES

**KEY TO IDENTIFICATION OF PLANTS.** This is a device to enable one to find the name of a plant. The name thus found is quickly referred to under its alphabetical location, where full information will be found in regard to it.

**SYNOPSIS OF PLANT KINGDOM.** This is one of the most important features of the new edition. It constitutes a general running account of the classes, orders, and groups of plants, with a brief sketch or characterization of 215 of the leading families comprising those that yield practically all the cultivated plants. These family descriptions give the botanical characters; the number of genera and species and the ranges; a list of the important genera; brief statements in regard to the useful plants; and diagrammatic illustrations.

**ILLUSTRATIONS.** There are 24 colored plates; 96 full page half-tones; and more than 4,000 engravings which serve as guides in the text.

**THE GLOSSARY.** This is an analysis of all technical terms that are used in the work and in similar works. It comprises botanical and horticultural terms with brief definitions.

**TRANSLATION AND PRONUNCIATION OF LATIN NAMES.** In Volume I is inserted a list of between 2,000 and 3,000 Latin words used as species—names of plants, giving the English equivalent or translation and the pronunciation.

**CLASS ARTICLES.** Special effort has been made to secure the best cultural advices for the plants requiring peculiar or particular handling. Here are some of the titles of these articles; Ants; Autumn Gardening; Bedding; Diseases; Drainage; Floral Designs; Formal Gardening; Hotbeds and Coldframes; Insects; Landscape Gardening; Lawn Planting; Orchards; Rock Gardening; Subtropical Gardening; Tools and Implements; Village Improvements; Window Boxes, etc.

**GENERAL INDEX.** The final volume contains a complete index to the entire work, enabling the reader to locate volume and page of any subject he has in mind.

WE ARE MAKING A SPECIAL CASH PRICE FOR THE COMPLETE SET OF $45.00

### GARDENERS' AND FLORISTS' CLUB OF BOSTON

If you want to learn anything about poultry keeping, ask the members of the Gardeners' and Florists' Club of Boston. It developed at the regular meeting held at Horticultural Hall on Tuesday night that the club is filled with poultry experts, and when Professor Argood, of the Norfolk County School, got through talking about poultry matters, he was deluged with questions. Professor Argood gave a very interesting talk on the selecting of breeders and layers. He illustrated his remarks by the aid of living pullets.

He gave a great amount of interesting information which will help the poultry experts in the club to increase their egg production.

Previous to the lecture several matters of business were disposed of. A committee to draft resolutions on the death of the late John K. M. L. Farquhar was appointed. The report on the picnic showed that there was a balance of $80.

Six new members were voted in. They are Reginald Brown, Readville; Alfred E. Mann, Milton; Nando Rossi, Medfield; John F. Flood, Woburn; William E. Sanderson, Newton Center; Robert E. Powers, Cambridge.

It was announced that the next meeting would be held October 25, as the Hall will be occupied on the regula meeting date.

### BULBS FOR THE NEW ENGLAND TRADE

For the first time since before the war Holland bulbs are now coming direct to Boston by boat. The second arrival of the season is a Holland-American liner which is now being unloaded. This boat brought in a full cargo of Holland bulbs consigned to New England. So far as the different cases have been opened, they show the bulbs to be of particularly good quality, the tulips firm and sound and the hyacinth bulbs large. Some new varieties among the Breeder, Darwin and Rembrandt tulips are coming to light.

The importers say that florists are buying bulbs much more freely than for several years, and that while there is plenty of stock now there is not likely to be any surplus in New England later in the season. No bulbs are being consigned to Boston for auction sales, although some of the smaller firms which did not get a great many orders through agents are sending a lot of bulbs to the New York market for auction.

### NEW STORE OF THOMAS GALVIN, INC.

The handsome new store of Thomas Galvin, Inc., on Boylston Street at Copley Square, Boston, was opened the past week. Although not so large as the building formerly occupied by this concern further up the street, its appointments are superb. Many changes have been made in the store, including a new vestibule entrance. The interior finish is pure white, and the main store has a large gallery at the rear. The store front with boxes of evergreen plants across the window and door is very pleasing.

### MISS CASE HONORED

Miss Marian Roby Case, of Hillcrest Gardens, Weston, Mass., has been elected a trustee of the Massachusetts Horticultural Society, to succeed the late John K. M. L. Farquhar. Miss Case has been one of the society's most active members for several years, and has done much to promote its interests.

## THE TALK OF THE TRADE

It isn't often that a florist is found who has been in the harness steadily for nearly half a century, and yet is just as keen as ever about all the details of his business. Such a man, however, is Mr. Alexander Dallas, of Waterbury, Ct. It is 43 years ago since Mr. Dallas started this store, and he is still very active, attending the national conventions and the local florists' meetings. Of course a man must necessarily find considerable zest in life when he has been so successful as in Mr. Dallas' case. Not only has he a fine store and a large retail business, but he has as well a big range of greenhouses. That he keeps abreast of the times may be seen from the fact that in the carnation houses are the best of the newer varieties. Among them are two thousand plants of Laddie with which he is remarkably successful. He is also growing a very good yellow, the name of which was lost long ago, but which makes an excellent flower. Mr. Dallas is very fortunate in having a son who is equally keen about the business. Walter Dallas is a Yale graduate, the father believing that it is impossible for a man in the florist business to have too much education.

It seems to me that most of the roses which are sold in the Connecticut florist shops come from the Pierson plant at Cromwell, Ct. At least I found them everywhere on a recent trip through Connecticut. No doubt this is partly because of the central location of the Pierson greenhouses, making it easy to send shipments in all directions. At Waterbury I found that Ryan & Powers were buying roses heavily, finding a big demand for

Teddy, Jr., One of the Most Popular Boston Fern Varieties

them. Mr. Ryan, who is a very affable gentleman and interested in all civic affairs, is just the type of florist one likes to find, especially in the small cities. Mr. Ryan told me that he furnished flowers for a great many weddings, the foreign population of the city going in heavily for flowers on all such occasions. Formerly, he said, the flowers were often bought loose and taken to a dressmaker who made up the pieces to go with the gowns. This custom is passing, though, the florists being relied upon more than formerly to produce satisfactory designs.

---

While passing through New London, Conn., recently I saw a lot of people gathered around the window of Fisher, the florist, and stopped to see what occasioned this especial show of interest. I found in the window a big display of old fashioned flowers from one of the local gardens. There seems to be something about these flowers which awakens fond memories in many hearts. One woman would be heard to exclaim, "Why, my mother used to have a whole bed of those larkspurs!" while another would remark, " I am sure going to have those straw flowers in my garden next year." In the other window of the Fisher store was an immense specimen of the New Guinea Butter bean, which is really a variety of squash, in spite of its name. This was also the product of a New London gardener. If I am correctly informed, Mr. Fisher is noted for the novelty of his advertising methods. It was at the rear of this store that an out-door garden was laid out last spring, resulting in a greatly increased sale of potted plants and the making of many new customers.

---

It takes a lot of courage to climb the big hill which is the only way to reach Gehuldig Greenhouses in Norwich, but the climb would be well worth while if only to shake hands with the jovial Mr. Ernst, who runs the plant. Mr. Ernst is a big man in body and in heart, and he has some big things in his greenhouse, including several immense Kentia palms which he would be glad to dispose of if he could find anybody who wanted them more than he does. Mr. Ernst has a fine lot of ferns, and reports that they are selling very well indeed. Likewise he is building a new Lord & Burnham iron frame house of the most approved type, and there isn't anything which interests him more just now than the completion of this house, which is 108x35 feet. By the way, I almost forgot to mention the Godfrey callas which Mr. Ernst is growing and which sell very well in the nearby market. He grows them on benches, and I advised him to visit the plant of James Wheeler at Framingham, Mass., some day to inspect the latter's methods of growing them in beds, although perhaps the bench method is better for his situation.

---

I had my first chance to see a lot of the new rose, Montgomery's Priscilla, growing under conditions where I could form an opinion. All I had seen before were in small lots, not a large enough block of plants to really decide what I thought of them. At A. N. Pierson, Inc., recently, I went through the different houses where this rose is growing, and had a fine chance to look it over. It impresses me very favorably. The growth is good. It gives all appearance of being a free grower and easy doer. It must be quick, judging from the growth the plants have made since being housed. I noticed several batches, and there is a lively appearance to all of them. The flower was of good size for this time of year and well built, but there's an absence of fragrance. I can't say how the color will hold up during the darker days, but it has a very pleasing shade now. Taking it all in all, I think Montgomery's Priscilla gives promise of being a good commercial sort.

---

Yellow Frost, which is a yellow sport from the well known Early Frost Chrysanthemum, is showing up very well wherever I have seen it through the east. The stock which I have seen has been practically all the Nicholson sport. I can't say anything about the one or two other yellow sports that are on the market, but if they are the same as the Nicholson sport, in my opinion they are all right. The color is very good, almost if not quite as deep as Golden Glow, but I can't see why anyone should grow Golden Glow when such an easy grower can be had as Yellow Frost. It can be had in flower as early as they are of any value on the market. The grower can take as early a bud as he wishes, because it develops well shaped and colored flowers in the latter part of August, if they are wanted then. The foliage is decidedly better than Golden Glow, and I have seen no tendency towards damping of the flowers on the early lots.

---

I am forced to believe that business in the florist line, particularly the retail end, is every bit that can be expected for this time of year. I did find some complaint among the retailers around Newport and the summer colony around Watts' Hill and New London, but take it all in all, I doubt if it is very much different from other years. Most everywhere I find a prosperous and satisfied feeling among the retail florists, and with the wholesale growers there is certainly a feeling of optimism. Everyone is preparing for a big year ahead, and I think that is half of the battle.

I heard the explanation the other day by one florist that we had no right to expect a lot of flower buying during the summer. Everyone in the business has been spending their dollars for some time past educating the public into flowers. Their customers are planting gladiolus, dahlias, asters, in fact, all kinds of annuals, and naturally they can have flowers for their own table. That is no loss, however, for as soon as the frost cuts their own stock down, they are going to the florist to buy. They won't stop because they have lost their own stock. I am inclined to believe that this florist had the right view. I think that the whole answer is that we are having just about normal business. It hasn't been much different other years, according to my observations.

---

I disagree with the florist who said that too many flowers are being grown for the demand. Everyone must know that very little new glass is being erected this season, and for the past season back there has been practically none. We also know that in the natural course of events there is a steady increase in buying from one year to another. Every healthy business will find an increase. Every business is going to make it possible to show an increase in sales, and I don't think that I am open to dispute when I say that the small amount of glass being erected will anywhere near cover the normal increase in business from year to year.

---

Earlier in the season I was led to believe that there would be an over abundance of cyclamen for this year. There was a lot of stock around in late spring and early summer, but there has been an unusual loss this year, even among the cyclamen experts, with the result that, around New England at least, everything in the cyclamen line will probably clean up in good shape.

There is a fine lot of stock around. I think fully up to the best that we have ever seen, and I would mention in particular two growers who have cyclamen done in a wonderful way. They are Frank Edgar of Waltham and Thomas Roland of Nahant. It's a pleasure to look at such stock.

# THE FERN SHOW AT BOSTON

## One of the Most Remarkable Exhibits Ever Staged in America.

Never before has America seen such a show as the great fern show which opened in Horticultural Hall in Boston at 1 o'clock, Sept. 22. Novel in conception and artistic in execution, it has set a standard which will be reached only with difficulty in subsequent exhibitions of this kind. At this writing it is impossible to tell to what extent the public will patronize the show, which will continue through Sunday. Comparatively little advertising has been done, and the results will show whether or not it is possible to put on a great exhibit without extensive publicity and make it a success.

From the point of view of the trade, however, the show is an exceptional one, and growers and florists from many parts of the country are in attendance. In many respects it is really a trade show, because the exhibits consist wholly of material grown under glass, and cover a wide range of tropical plants, many of which are in commerce.

The lecture room is filled entirely with the exhibit of Mr. A. C. Burrage, president of the Society. As usual, his display has been put up with great skill under the direction of Douglas Eccleston, the very efficient superintendent. One side of the hall under the window is banked with ferns, the center of the space being occupied by a charming little grotto containing an artistic piece of statuary. In this collection are many rare ferns from the Burrage conservatory. They include Polypodium mandianum, Alsophila excelsa, Polypodium lingua, Platycerium grande, Lomaria gibba, and splendid specimens of the climbing fern, Lygodium Scandens.

In the center of the hall are several good specimens of Cibotium Schiedei. Other ferns are scattered around the hall and include Polycodium Knighti. On the side of the hall opposite the windows is a large and varied collection of orchids, many of them very rare. As a background for this collection Oncidium varicosum has been used most effectively. At least 40 varieties of orchids can be counted on the tables, and an especial display is made of Vanda Lowei, an extremely rare variety, of which only one or two others are known to exist in this country.

The entire end of the big hall is taken up with the exhibit of Wollrath & Son, of Waltham. It is the first time that this firm has ever made a fern exhibit, but they certainly have done themselves proud. The brick wall has been hidden by evergreen trees, in front of which the ferns are arranged, one tier above another, in a highly artistic manner. The arrangement of this display was in the hands of Mr. M. J. MacCormack, the florist decorator in Filene's department store in Boston, and reflects much credit upon his skill. In the foreground a brook trickles merrily down a slight decline.

The Wollrath collection contains fully three hundred ferns, including thirty different varieties. Among these ferns is a new sport of Teddy, Jr., which has not as yet been named. Directly in front of the massed ferns are baskets of ferns suspended from huge birch pole tripods, and at one side are huge ferns in ball form, the varieties Macawi and Verona being used.

In a corner of the hall at the right of the Wollrath exhibit are several flowering plants from the Arthur Lyman estate in Waltham, George F. Stewart, superintendent. These plants, which are in full flower and attract much attention because of their beauty, include Clerodendron Balfouri, Cleroma elegans and two forms of Dipladenia. One of the latter is the D. splendens profusa, which Mr. Stewart has shown before, and a smaller seedling called Ella Lovell Lyman, which, curiously enough, is evergreen.

PRESIDENT A. C. BURRAGE

Opposite this exhibit is a very splendid display staged by Julius Roehrs and Sons, of Rutherford, N. J. This display consists largely of orchids in many forms, but the crowning feature is a wonderful plant of the fern Marattia erecta. It is an immense plant and the only one to be seen in the hall. According to Mr. Roehrs this fern, which comes from Australia, has been ten years getting its present enormous proportions.

A very interesting display in the main hall is a round group of ferns from the Thomas C. Proctor estate at Topsfield, Mr. James Marlborough, superintendent.

In the smaller hall the Brooklyn Botanic Gardens has a display of ferns and other plants occupying one entire side. It is staged under the direction of Professor R. C. Benedict, who lectures on ferns Saturday afternoon.

At the extreme end of this hall is an exhibit of orchids from the A. N. Cooley estate at Pittsfield, Mass., Oliver Lines, superintendent.

The orchids here have a background of Adiantum cuneatum, which is one of the prettiest ways in which to stage orchids, the delicate tracery of the ferns combining splendidly with the flowers. The Cooley exhibit attracted even more attention after the awards were made than before, as the Brasso-Laelio-Cattleya Baroness was named by the judges as the best orchid in the show. It is a white orchild with a delicate pink throat.

Close by is a small group of orchids, largely Cypripediums, from the Butterworth establishment in Framingham. In the center of this group is a wonderful Cypripedium named for Mrs. Butterworth, which is being shown for the first time and which has not flowered before for five years. It is a very rare, beautiful plant.

One of the most attractive exhibits in this hall is that made by F. R. Pierson, of Tarrytown, N. Y., made up as it is wholly of specimen Boston ferns in eighteen varieties. This collection won a first prize, and is receiving particular attention from the trade, offering, as it does, an opportunity to see some of the newer ferns at their best. Mr. Pierson was awarded a gold medal for N. Plumosa Aurea as the best new fern.

### The Manda Exhibit

The outstanding feature of the show in the main hall is the exhibit of W. A. Manda, of South Orange, N. J. This is the biggest and most remarkable collection of tropical plants ever shown in Boston. Indeed, without much question no such display could possible be put up by any other grower in the country, and even at that Mr. Manda has not brought to Boston all of the wonderful plants to be found in his unique establishment. The Manda exhibit covers 2500 square feet of floor space. Nearly a hundred cases containing the smaller plants were shipped to Boston by boat, and in addition two truck loads of material came over the road. As may be supposed it cost Mr. Manda a small fortune to make this exhibit, but without it the show would have seemed small.

The Manda collection is staged at the foot of the stairs. The main group consists of low growing ferns, including the varieties of Adiantum, Pteris and Selaginellas. Flanking the group are huge tree ferns, ten to eighteen feet high, and including Dicksonias, Cibotiums and Alsophilas. At the end of this group and just at the foot of the stairs is a remarkable Lycopodium representing Bunker Hill monument and is 10 feet high. This is one of the most remarkable features of the show.

In order to make his exhibit more pleasing to the public, Mr. Manda has combined his entries for the various classes in general groups. He argues and with good reason that a much more attractive picture is composed when the plants are used in masses instead of having each class staged by itself. It is because he has followed this policy throughout his exhibit that his display is so effective.

At each side of the hall flanking the main group are other large displays from the Manda establishment. The number of plants shown seem endless in variety, and the visitor can spend hours studying them, finding increasing interest as he goes along. Among the plants which attract the most attention are the Staghorn ferns, of which there are several immense specimens. A specimen of Apsophila which attracts special attention towers far above the heads of visitors and has a trunk which looks as though covered with hieroglyphics because of the curious scars left by falling leaves in years past. The upper part of the trunk is covered with Bromeliads in variety.

On the same side of the hall is a large collection of Rex Begonias, plants which are much sought after just now, but the growing of which puzzles many greenhouse men. Mr. Manda says that as a rule these plants are kept too warm during the summer. They like a cool moist atmosphere, and must not be hosed above the leaves.

In the collection of Dracaenas, varieties of note are D. Bradburyana and Longi, as well as two unnamed but very promising seedlings. Among the features of the Manda group of special interest to the public are Crested Ivies made into letters in a novel and interesting way, as well as gorgeous birds of paradise. Hanging under the balcony are very large made-up fern balls and baskets of ferns. On the wall are excellent specimens of Polypodium Mandiana.

Further down the hall in a location by itself is a collection of cacti covering a hundred square feet. Cacti always attract the public, but it is noticeable that many members of the trade are giving this group special attention.

It is impossible to discuss all of the plants shown by Mr. Manda. As it is, the description given of this display is really a meager one compared with what it warrants. But space is limited. Something should be said, however, about the quality as well as the great variety in these groups. Few men in the country can grow plants of these types so well—plants which require many years to develop, unlike those which can be grown in six or twelve months. And this applies to the more common ferns like varieties of the Nephrolepis, as well as to tree ferns and others less well known.

### List of Awards

Group of tropical greenhouse ferns, at least 200 sq. ft. (For commercial growers only): 1st, W. A. Manda; 2d, Wollrath & Son. Group of tropical greenhouse ferns, at least 200 sq. ft. (For amateurs only): 1st, Albert C. Burrage; 2d, Thomas E. Proctor. Group of tropical ferns, 100 sq. ft. (For commercial growers only): 1st, W. A. Manda; 2d, Wollrath & Son. Group of tropical greenhouse ferns, 50 sq. ft.: 1st, W. A. Manda. Twelve distinct varieties of tropical greenhouse ferns (For commercial growers only): 1st, W. A. Manda. Six distinct varieties of tropical greenhouse ferns (For commercial growers only): 1st, W. A. Manda. Collection of Nephrolepis ferns, 100 sq. ft.: 1st, F. R. Pierson; 2d, W. A. Manda; 3rd, Wollrath & Son. Best single Nephrolepis exalta (Boston fern): 1st, W. A. Manda; 2d, Wollrath & Son; 3rd, F. R. Pierson. Collection of Cibotium ferns, 100 sq. ft.: 1st, Albert C. Burrage; 2d, W. A. Manda. Best single Cibotium fern: 1st, W. A. Manda; 2d, Albert C. Burrage; 3rd, T. E. Proctor. Collection of Adiantum ferns, 100 sq. ft.: 1st, W. A. Manda. Best single specimen of Adiantum fern: 1st, Thomas E. Proctor; 2d, W. A. Manda. Collection of twelve Platycerium (Stag Horn) ferns: 1st, Albert C. Burrage; 2d, W. A Manda. Best single Platycerium fern: W. A. Manda. Collection of Polypodium ferns: 1st, W. A. Manda. Best single specimen of Polypodium fern: 1st, Mrs. A. S Estabrook; 2d, Albert C. Burrage. Collection of Selaginellas and Lycopodiums, 50 sq. ft. (For commercial growers only): 1st, W. A. Manda. Collection of Selaginellas and Lycopodiums, 50 sq. ft. (For amateurs only): 1st, Albert C. Burrage. Twelve Selaginellas and Lycopodiums, distinct varieties (For comercial growers only): 1st, W. Manda. Six Selaginellas and Lycopodiums, distinct varieties (For commercial growers only): 1st, W. A. Manda. One specimen tree-fern: 1st, W. A. Manda, One specimen tree-fern, with other foliage or flowering plant attached to stem: 1st, Albert C. Burrage. Group of tropical ferns and tropical orchids, 100 sq. ft.: 1st, Albert C. Burrage. Group of tropical ferns and tropical orchids, 50 sq. ft. (For amateurs only): 1st, Arthur N. Cooley; 2d, Henry Stewart. Group of tropical ferns and Vanda orchids: 1st, Albert C. Burrage. Group of tropical ferns and Cypripedium orchids, 50 sq. ft.: 1st E. B. Dane. Best Odontoglossum orchid in the exhibition: Albert C. Burrage. Best Vanda orchid in the exhibition: Albert C. Burrage, Vanda Lowii. Best Cattleya orchid in the exhibition: A. N. Cooley, Vanda Princes Royal (Fabia Hardyana). Best single orchid plant in the exhibition: A. N. Cooley, Brasso-Laelio-Cattleya Baroness (Brasso-Cattleya Ophir Laelio-Cattleya Léemaniae). Twenty-five square feet of orchids: Clement Moore. Collection of cacti: 1st, W. A. Manda; 2d, Wollrath & Son. Collection of Bromeliads: 1st, W. A. Manda. Two specimen ferns in hanging baskets (For commercial growers only): 1st, Wollrath & Son. Two specimen ferns in hanging baskets (For amateurs only): 1st, Albert C. Burrage. One specimen hanging basket with ferns (For commercial growers only): 1st, W. A. Manda; 2d, Wollrath & Son. One specimen fern in hanging basket (For amateurs only): 1st, Albert C. Burrage. One fern ball: 1st, W. A. Manda; 2d, Wollrath & Son. Collection of fern plants which best show the fern growth from the germination of the spores through the series of different growths until the plant is fully developed: W. A. Manda. Best new fern not yet in commerce: F. R. Pierson, N. Plumosa Aurea. Best single specimen fern plant in any class in the exhibition: Julius Roehrs Co., Angiopteris evecta. Collection of Dracaenas, 100 sq. ft.: 1st, W. A. Manda. Collection of twelve Dracaenas: 1st, W. A. Manda. Best single specimen of Dracaena: Mrs. A. F. Estabrook. Collection of Rex Begonias, 50 sq. ft. (For commercial growers only): 1st, W. A. Manda. Collection of Rex Begonias, 50 sq. ft. (For amateurs only): 1st, Albert C. Burrage. Collection of twelve Rex Begonias (For commercial growers only): 1st, W. A. Manda. Best single Rex Begonia: Albert C. Burrage. Best collection of new and rare greenhouse and foliage plants, 50 sq. ft.: 1st, Arthur Lyman; 2d, W. A. Manda.

MR. W. A. MANDA

**Gratuities:**—Joseph Manda Co., collection of cut orchid flowers; Julius Roehrs Co., group of orchids, foliage plants, and ferns; J. T. Butterworth, collection of Cypripediums, plants and cut flowers; Lager & Hurrell, cut orchids.

**Silver Cup**—To be awarded to the group, large or small, which is the most artistically arranged: Albert C. Burrage.

**Appleton Gold Medal**—George E. Baldwin, collection of hybrid orchids.

# TROPICAL FERNS

## Paper Issued in Connection With the Tropical Fern Exhibition of the Massachusetts Horticultural Society

By Ralph C. Benedict

What special interest attaches to ferns that they should be made the center of an exhibition like the present? They bear no flowers; they rarely show any coloring other than some shade of green; they produce no products of any real commercial importance. In what particular traits or characteristics does their hold upon us lie?

"Nature made ferns for pure leaves." So wrote Thoreau, and today the scientist can scarcely better that expression. Fern leaves represent the supreme development of the leaf organ among plants. In no other group of plants are leaves carried to so high a state of perfection.

One element of interest attaching to ferns lies in their antiquity. Geologically they are the most primitive of the larger land plants. The vegetation of the Palaeozoic period included a considerable proportion of ferns. Coal represents in large part the solidified carbon of fern plants perhaps 100,000,000 years old. None of our flowering plant types is half as old.

Today ferns are found wild chiefly in the tropics, although they can live wherever other plants can grow. Two or three species range north of the Arctic Circle. About fifty kinds are found in all Canada. In the United States, almost any single state may count as many within its borders, while Florida, partly tropical, has over one hundred kinds. It is, however, only in the real tropics that ferns abound. Given warmth, ample rainfall, and considerable range in altitude, even a small area may have more than the whole United States. Jamaica, for example, has about five hundred fern species, over twice the number found in the United States. The Andean mountain range, from Mexico into South America, is the home of hundreds, thousands, of species, many of them yet to be collected and described. There are known at present about seven thousand species of ferns while ten thousand is the probable total number as estimated by Carl Christensen, probably the leading living authority on these plants.

The widest and most popular appeal of ferns lies in their availability as plants for the house or conservatory. For this purpose millions of plants are grown every year in the United States. The choice of the proper kind to grow depends on the surrounding and care that can be given. There is no plant that can thrive or even live in a poorly lighted room filled with the fumes of burned illuminating gas. Given good conditions of light and air, and reasonable attention to the thirst of the plant, there are several species of ferns which may be expected to live and continue to grow reasonably well in an ordinary dwelling.

In considering some of the actual fern species which may be grown we may separate them into two groups as "house ferns" and "conservatory ferns." The house ferns also come naturally under two headings, as "table ferns," or fern dish species, and Boston fern varieties.

### Table Fern Varieties

Table ferns include ordinarily about a dozen different kinds. The plants are raised from spores by the million, and sold in small sizes for filling fern dishes for table decoration, often with a small palm as a center. The fern dish as made up is always a temporary decoration which needs refilling every few weeks, both because the plants are too crowded at the start, because some of the ferns are not adapted to continued house growth, and because fern dishes are rarely given a position in a room selected from the fern's standpoint. When the occupants become too large for the dish they may be repotted into separate pots and continued as house plants, if conditions are good. The following kinds are most commonly used. Most of them will do well as individual plants, always excluding conditions of poor air, poor light, and poor care.

Cyrtomium falcatum, the Holly fern, is grown in several varieties, Rochfordianum being most popular. The plants show a circle of bright green, glossy, thick leaves, springing once a year from a scaly center. It is a native in Japan and elsewhere in the Orient, and some strains are hardy as far north as New York.

Polystichum tsus-sinense (sometimes misspelled and mispronounced "tensemense") comes, as its name indicates, from the Tsus-Shima province of China. It produces a bushy growth of dark green, narrow, pointed leaves about fifteen inches high.

Pellaea viridis, one of the rock brakes, is native in South Africa. It bears slender stalked, graceful leaves, somewhat suggesting a maidenhair.

Adiantum cuneatum, the commonest florist's maidenhair fern, is very justly prized for the delicate beauty of its leaves, but is unfortunately not well adapted for house culture.

Pteris cretica, in its varieties Wilsoni, Rivertoniana, and others, Pteris serrulata, Pteris ensiformis Victoriae, and Pteris quadriaurita argyraea, are frequently seen as table ferns. All have leaves with long slender leaflets, spreading somewhat like the fingers of the hand, and growing about fifteen inches high as ordinarily grown. Several of the varieties are variegated, a rare condition among ferns. Most of them will do well in good house conditions, although several require greenhouse culture.

The New Nothrolepis Macawi

### Boston Fern Varieties

The Boston fern and some of its varieties are so exceptionally good for house plant use that they are raised and sold for this purpose almost to the exclusion of any other ferns. Discovered twenty-five years ago as a new variety of the wild sword fern, Nephrolepis exaltata, the Boston fern has come to be the most popular of all house plants. Over a million individual specimens are raised every year. The rubber plant is no longer the favorite.

About five years after its recognition, the Boston fern began to give rise to new varieties of which Anna Foster and Piersoni were first. These are little seen now, but other later forms are deservedly popular, Scotti, Roosevelti, Teddy, Jr., elegantissima, Whitmani, Verona and Smithi. Nearly one hundred named varieties of Boston fern have been introduced, others are still appearing, but the varieties named above are probably the best for continued growth in the house. The last two, finely divided and lacy, really require a greenhouse to bring them to best form, but will remain in good appearance in a house for months.

### Conservatory ferns

Conservatory ferns include all except the hardy species, and most of these may grow well under glass in cool house or cold frame conditions. The whole fern class is divided by scientists into twelve families; these are further divided into over one hundred and fifty genera, with a present total of known species of about seven thousand. In other words, there are a possible total of seven thousand conservatory ferns, not including the hundreds of horticultural varieties. Besides these we may note two groups, sometimes mistakenly called fern allies, which are usually listed with ferns. These are the selaginellas and lycopodiums, related to the Christmas greens, ground pine ,and the horsetails or scouring rushes. The latter group is without horticultural significance, but selaginellas are of considerable importance and form beautiful conservatory plants.

## NEWS NOTES

The greenhouse of George Sells at Lancaster, Pa., was recently destroyed by fire, with a loss of $5000.

The Capitol Floral Co., of Vicksburg, Miss., is to make extensive improvements, including the redecorating of the interior. Miss Alvina Rockwood is in charge of this store.

# ADVERTISING AND SELLING

A unique method of obtaining business was recently undertaken by the George Wittbold Co., of Chicago, one of the largest florist concerns in that city. It is a plan which ought to work just as well in small towns.

A printed postcard bearing the picture of a potted fern was prepared to advertise Boston ferns at a very attractive price, considerably below the usual price, and the patron was urged to order one of these ferns over the telephone. For this purpose a nickel was pasted in one corner of the card; while on the back of the card were printed some excellent directions for the care of a Boston fern. The cards were sent out in envelopes to a selected list of 1000 people, with return envelopes inclosed in which the customer was urged to send in his personal card. This "stunt" yielded an excellent return, to say nothing of being splendid advertising from which the Wittbolds heard later.

### File Patrons' Cards

It will be observed that all these orders were taken over the telephone, by means of which the Wittbolds make 90 per cent of their sales of cut flowers and potted plants. As their delivery service extends to all parts of the city and suburbs, an immense volume of business is transacted on the basis of charge accounts. That there may be no weak link in this chain of service, regular customers are encouraged to leave or send in a good supply of their personal cards, to be sent out with orders. A file of these cards is kept in the Wittbold office and, in rush seasons, a special clerk is kept busy writing tags and inclosing these cards with the various plants and floral pieces ordered by the customers.

### Renting Palms

One of the "bypath" activities, which the Wittbolds have developed to a high degree, is their all-the-year-round service of furnishing palms, ferns and potted evergreens to a dozen of the local hotels and several department stores for purposes of decoration. This rental collection is large enough to occupy two entire greenhouses of the Wittbolds' city plant. The greenhouse force takes charge of the work, sending a man to make the rounds twice a week to water the plants and from time to time to replace them with young ones, as they grow seedy and old. This service, for which the hotels and stores are charged by the month, brings in highly profitable returns and goes far to lighten the overhead of the dull seasons.

### At the Greenhouses

The ferns and palms are raised in the big Wittbold plant house at Edgebrook, Ill., where ten acres of greenhouses are maintained, with 150,000 square feet under glass. Here the Wittbolds make a specialty of palms, ferns and cyclamen, with a sideline of thousands of Easter lilies, sold largely in Chicago. They also raise all their potted flowers and a few cut flowers, most of the latter, however, being bought at the commission houses.

In the spring the landscape department does a rushing business. Its salesmen start out about February 1, seeking orders for nursery stock and soil, the handling of refuse, the planting of trees, shrubs and flowers, the grading of lawns, sodding, the laying out of flower beds and the filling of window-boxes over apartment house entrances and in sun parlors. Sometimes this service is extended to cover the building of grottoes, rockeries, fountains and rustic seats on private grounds.

### How Salesmen Are Handled

Naturally, with a crew of salesmen bringing in orders from all over the city, a very thorough system of handling them in the office is necessary. The signed contract which the salesman has obtained from the customer is copied on a larger contract blank with a list of the nursery stock and materials carefully tabulated, labor charges specified and other details, such as the hauling away of refuse, arranged for. This copy is sent to the customer and similar copies are made for the manager's record and for the foreman on the job. Another copy, giving a complete record of the labor and materials used and the total charges thus incurred, is filed in the office for reference. As all copies of one contract have the same file number, they are easily traced through the various hands concerned in the job.

If a florist is going to expand his business and keep abreast of the times, he must be prepared to take on whatever line of work presents itself, although it may be somewhat contrary to past conditions. The work of spraying trees and shrubs might not seem at first thought very closely associated with the business of a florist shop, and yet the George Wittbold Co., one of Chicago's largest florists, with

# "Craig Quality" FERNS

When you think of Ferns—think of Craig. We are headquarters. The largest Fern growers in the country. We mention here a few of our prominent varieties and will be glad to have your orders.

Remember us also on Areces, Cyclamen, Dracenas, Pandanus, and other stand-bys in Foliage and Flowering Plants

**Nephrolepis Norwood**

The most beautiful form of Nephrolepis to date; graceful, compact and symmetrical. A vigorous, healthy grower. All growers are invited to inspect it at our Norwood greenhouses.

**Strong Plants**

2½ inch pots, $3 per doz., $12 per 100, $100 per 1,000
4 inch pots, $6 per doz., $45 per 100.
Orders filled strictly in rotation.

**Nephrolepis Verona**

Makes a good plant in all sizes. Much finer frond than any crested sort outside of N. Smithii. The fronds are carried on a heavy, wiry stem. We consider it one of the best of the newer introductions
2½-inch pots, $10 per 100, $90 per 1,000.
4-inch pots, $40 per 100.
6-inch pots, $12 per doz., $90 per 100.

**Nephrolepis Elegantissima Compacta**

A dwarf, compact form of Nephrolepis Elegantissima, each plant making an ideal shape
2½-inch pots, $10 per 100, $90 per 1,000
4 inch pots, $5 per doz., $35 per 100
6-inch pots, $12 per doz., $90 per 100

**Nephrolepis Teddy Junior**

Fine young plants from 2½-inch pots, $10 per 100, $90 per 1,000
6 inch pots, heavy, $12 and $15 per doz
8-inch pots, $24 per doz
11 inch tubs, $4, $5 and $6 each

**Nephrolepis Smithii**

The greatly improved Amerpohlii. It is a compact form, much finer than Amerpohlii and does not break down in the center. The fronds are carried on wiry stems. This variety will have a wonderful side up to a 6-inch pot, being particularly showy for basket work.
2½-inch pots, $10 per 100, $90 per 1,000.
4-inch pots, $6 per doz., $40 per 100.
6-inch pots, $12 per doz.

**Nephrolepis Harrisii or Roosevelt**

2½-inch pots, $10 per 100, $90 per 1,000.
4-inch pots, $35 per 100.
6-inch pots, $12 per doz.
11-inch tubs, $5 and $6 each.

**Nephrolepis Scottii**

2½ inch pots, $10 per 100, $90 per 1,000.
4-inch pots, $35 per 100.
6 inch pots, $12 per doz., $90 per 100.
8 inch pots, $24 and $30 per doz.

# THE ROBERT CRAIG COMPANY

GROWERS AND DISTRIBUTORS OF

*Meritorious New and Standard Foliage and Flowering Plants*

NORWOOD, Delaware County, PENNSYLVANIA

Norwood is a Philadelphia Suburb, just a little way outside of the big city, and easily reached.

offices and greenhouses occupying half a city block, carries on each year an extensive spraying campaign, which not only brings them in a profit, but increases the number of their store customers. Along about June, when it is hard to sell flowers, the Wittbolds launch their tree spraying campaign. They send out letters to a large mailing list of property owners, calling attention to the havoc wrought by the tussosk moth caterpillar and other insects. These letters are followed by agents who explain the service which the company offers. Large numbers of small property holders as well as estate owners are found who are glad to have this work done and to pay well for it. When a truck goes into a certain locality, salesmen work that same territory so that a maximum amount of work is obtained for each day without any long jumps.

### Checking Orders

This system is a sample of the pains taken in all other departments to keep a close check on all customers' orders. The Wittbolds leave nothing to chance or guesswork, but turn a vigilant eye on every branch of their finances. In fact, Manager John Wittbold keeps a "daily profit sheet," on which is prepared for him an itemized record of the day's inventory and stock sold, with total inventory and sales, the inventory from the previous day, the day's purchases and a final computation of the gross profit. Thus he is able to figure out each night whether the company has made or lost money by the day's transactions.

# RAMBLING OBSERVATIONS OF A ROVING GARDENER

Where is the country's best dahlia show held? Probably most growers would answer instinctively, "New York," having in mind the big show held there each fall. The New York Show is of course a big affair, and one which is requiring a greater amount of space each season. Dahlia connoisseurs tell me, however, that for quality there is no show held which equals the one conducted by the Collinwood, N. J., Horticultural Society. The society has been holding these shows for several years, and they have grown better each season. It is true that the number of flowers exhibited is not nearly so great as at some of the other shows, but the flowers are perfection itself. Nowhere, I am told, are all the leading varieties grown quite so well. Another thing—if there is a new dahlia of merit which has come onto the market anywhere in the country, it is sure to be found at this show. The dahlia enthusiasts of Collinwood—and there are many of them—keep tabs on all the novelties and make a point of trying them out promptly. The success of the show in the past and the progress made by the society has been due in large measure to the untiring efforts of H. R. Lippincott, and much regret is felt over the fact that he has now transferred his residence to another town. Much hybridizing has also been done by other growers, one of the most prominent being John M. Root, who for two seasons has won the silver cup. If he is a winner again this year the cup will be his.

---

J. K. Alexander, the dahlia expert of East Bridgewater, Mass., decorated the Majestic Theatre in Boston at the opening of the season, Monday, Sept 19. While he used gladioli to some extent, the majority of the flowers employed were dahlias. Inasmuch as it is seldom that dahlias are used in this way, considerable attention was given the display in the newspapers. Perhaps the time is coming when dahlias will be used as freely for cut flowers in this country as they are abroad. For some reason, however, they do not seem to have developed many varieties which are suitable for the purpose. I have just been talking with Mr. J. Otto Thilow, of the Dreer Co., who told me that several years ago while in Europe he saw dahlias used as cut flowers in a very lavish way. This was particularly true in Hamburg, where florist stores were filled with cut dahlias arranged in boxes. They were largely of the cactus type, but instead of being the huge hybrids now commonly seen, were rather small flowers. He was told, Mr. Thilow said, that the stems were always dipped into hot water as soon as the flowers were cut, and the boxes were filled with damp moss

---

There is a good field for the development of dahlias which are especially adapted for cutting. Personally I do not like dahlias which will not stand up fairly well in the house and which hang their heads as though ashamed to be seen while in the garden. It is a pity that some very good flowers have especially weak stems. Surely the strengthening of these stems should receive the attention of the growers. Once in a while one finds a large dahlia, like King of the Autumn, which looks the world squarely in the face. As usual, this dahlia was much admired at the recent dahlia show in Boston. At its best it is one of the finest dahlias for cutting, but has a marked tendency to come single. Sometimes a large proportion of all the flowers in the block will be single or only partially double. This is true in commercial gardens as well as on private places. Yet even as a single flower it is attractive.

Not long ago as I walked over the fields of the Bayard Thayer estate in Lancaster, Mass., I felt almost as though I had been suddenly transported to the Scottish moors, for spread before me were great patches of Scotch heather growing as luxuriantly as ever could be the case on the native heath of this famous plant. Probably there is no other place in the country where so much heather can be found as on this estate, and Mr. William Anderson, the very efficient superintendent, tells me that he has no difficulty in getting it to multiply. In many places there are patches of heather which were self-sown but new plantings are also made from cuttings. In situations which are not too exposed and where plenty of snow collects in the winter, heather seems to thrive. At one time a lot of it was to be seen at West Townsend, and attracted much attention. Some people thought that it must be native to the region, but the fact has been established that a Scottish woman brought over the seed and planted it. Many people try to bring over plants but fail to establish them. If they would bring seed intsead, they probably would have more success. It is unfortunate the Townsend planting has now largely disappeared, having been choked out by the rank shrubby growth which has been allowed to take possession of the field. While heather is most commonly seen growing in large patches, there is no reason why it shouldn't be employed in a different manner. At Hillcrest Gardens, in

## HENRY A. DREER, Inc.

**714 CHESTNUT STREET PHILADELPHIA**

Weston, Mass., the well known estate of Miss Marian Roby Case, clumps of heather set a few feet apart border one of the long paths, and the effect produced is excellent.

No branch of outdoor gardening can be more engrossing and pleasurable to the lover of the beautiful in Nature than the culture of ferns. A fern grotto in a suitable place and properly cared for is a delight all summer long and we often wonder that this feature is not more generally introduced in home grounds. Among the hardy fens the Aspleniums are in the first rank as to variety and usefulness. They are found all over Europe, America, Asia and northern Africa. Few ferns are more generally admired than Asplenium filix foemina, the "Lady Fern," in the scores of forms into which it has sported. There is almost no end to its diversity of frond; some are feathery, some tasseled, others tufted like parsley, others twisted and distorted, and to these variations distinctive names have been given.

The accompanying illustration of Asplenium Filix-Foemina Victoriae shows one of the most interesting forms, one in which the pinnae cross each other with beautiful regularity. The specimen shown was photographed on the H. A. Dreer establishment at Riverton, N. J.

Willis E. Fryer, the nurseryman of Mantorville, Minn., has found the iris to be one of the easiest plants to ship. He says: No plant will endure more than the iris, and will relate my experience with one shipment to New Zealand as an example. On the 20th of September, last year, I packed an order in "bone dry" excelsior, and they were returned twice from San Francisco through an error of the Postmaster there. They were then placed in an open shed during the winter, and planted April 20th. Nearly every plant grew.

### NEWS NOTES

The many friends of Mr. Ernest F. Coe will be interested to learn that he has retired from the Elm City Nurseries and will devote himself in the future to landscape work. He will have an office at 951 Forest Road, New Haven, Ct., after October 15. Of course the Elm City Nursery Co.'s landscape department will be in no way influenced by Mr. Coe's retirement.

L. Otto Thilow, secretary of Henry A. Dreer, Inc., Philadelphia, has been in Boston the past week attending the conclave of the Thirty-third Degree Masons. Mr. Thilow drove over the road, with his two daughters, one of whom acted as chauffeur, and the return was made via the famous Mohawk trail.

## ADVERTISING NURSERY STOCK

### An Unusual Paper Read by John Watson at Southern Nurserymen's Convention

At the annual convention of the Southern Nurserymen's Association held in Chattanooga, Tenn., Sept. 7, Mr. John Watson of Princeton, N. J., a former president of the American Association of Nurserymen, read a paper on nursery advertising which has aroused wide interest and which has been much commented upon. Extracts from this very unusual paper are given below:

"First of all, what is advertising? And what is its purpose? It is to sell something, isn't it? So I would say that advertising is what you do and say that establishes a friendly relationship that results in sales. Selling is not the immediate result; it follows something else. A relationship has to be established and it must be built on confidence and good-will. There must be permanency in the relationship and what grows out of it. If I advertise my second-hand car for sale, I want an immediate purchaser and, after delivery, the matter is ended. But nurserymen advertise for a larger purpose; you want orders now; but your business does not end this year nor next year; when you sell a bill of goods to a planter, your business with that man has just begun because your buyers must be made into permanent customers. A relationship of confidence and good-will, then, is of the utmost importance to you. The buying of nothing else requires the same degree of confidence that the planter must put in the nurseryman. Successful nursery advertising has to be built on that idea. It must be frank, straightforward, absolutely truthful. It must never over-state the facts; understatement is an actual advantage; it inspires confidence. And then performance must match every promise.

"When I read nursery advertisements I find that most nurserymen buy space to announce that they are nurserymen; that they grow trees. Now, there is neither novelty nor news in that statement. It is not advertising. Nobody is going to make the mistake of supposing that a nurseryman is a purveyor of books or of hats or of ice-cream freezers. I consult a dozen nursery catalogues and I find them a dozen books about trees and plants, often very handsome books, differing in covers but not in contents, varying in minor details but not in essentials. I find that Jones and Brown distribute more or less well-written and handsomely-illustrated books containing very much the same list of varieties described in about the same language and illustrated with the same pictures. They are good hand-books. But as a possible buyer from one of them, which one am I going to place my order with? How am I to know whether to buy of Jones or of Brown? They don't tell me. The very thing that I am interested in as a buyer is the thing that is conspicuously absent from nearly every nursery catalogue. It is the 'reason why.' And it isn't there.

Mr. John Watson

"With us, the absence of that 'reason why' can be accounted for. Nurserymen, like a good many other advertisers, write their advertising copy and their catalogues to themselves. It is just an expression of the universal

**6 South Market Street, Boston, Mass.**

vanity. But we must address ourselves to the people we want to buy our goods. You are going about it apparently believing that the important thing is to sell. But the important thing to you is that people should buy. Forget about selling; think about the buying end. And that means you've got to get away from constant thought of your business and become intensely interested in the buyer's business. It is his order you want, isn't it? Go after it from his standpoint. Tell him the reason why he should buy your particular trees. If you are Brown, you must let the buyer know why Brown's trees are the very ones for him to buy. That is the great difficulty in advertising nursery stock. Everything else is easy but the most important thing happens to be the most difficult thing. If you think it can't be done, just take a week off and travel with one of your plate-book canvassers. He can tell you selling points about your business that you never knew before.

"Most advertisers of nursery stock recognize that difficulty and try to overcome it in various ways. The fact of age in a business is worth advertising because age is some assurance of quality or service without which the business might not have lived so long. But some of the best nurseries are new nurseries. The fact of size also warrants the assumption of a certain value in products without which the business might not have grown big. And yet some of the very small nurseries grow excellent stock and they answer your argument with theirs: the advantage of small acreage and personal attention to every detail. Some advertisers feature specialties, and it is of very great value to be able to offer something worthwhile that others cannot supply.

"And yet the public has noticed that not ten per cent of the novelties introduced with a great flourish of trumpets ever measure up to the old tested varieties. And so the public has become doubtful about that sort of advertising. And then there is the too common appeal of cheap prices, an argument that defeats itself at once—or should—because prices below the average of those of good firms invite the conclusion that they mean one of two things: either that the trees are not worth more than a cheap price or else that the nurseryman admits his incapacity as a salesman. And admitted incapacity in one matter arouses suspicion of incapacity in other matters connected with the business. Whenever a merchant tells me that his goods wont bring as much as another merchant's, I'm not going to risk buying his goods at any price. I can say out of experience—and I think all of you can, too,—that buyers are not attracted by cheap trees although they may be attracted by cheap prices. All of you have received letters telling you that your prices were higher than somebody else's but that if you would meet so-and-so's prices, the order would be placed with you. These correspondents want the cheap man's price but they prefer your trees. Your price inspires confidence. The bargain-price makes buyers suspicious of the goods.

---

"It is necessary for every nurseryman to have some good reason why buyers should give him their orders. That reason may be found in various things; the care with which varieties are propagated, the workmen's skill, the thoroughness of the cultivation, suitable land, equipment for proper handling at shipping time, shipping facilities, the service that follows delivery. All these are things that the buyer is interested in. Of overshadowing importance to the buyer is the matter of getting fruit trees true to name.

---

"When should nurserymen advertise? Or, to put it differently, when do folks buy trees and plants? That question has to be answered by every advertiser with respect to his goods. And I think that you and I can answer as to nursery stock out of our experience in buying other things. Isn't it a fact that we very often make up our minds to buy certain articles long before we get them? I can name off-hand a dozen things that I have seen advertised that I am certainly going to get later on. I haven't come into possession of them yet. But they have already been sold to me. That part of it has been done. And that is what we are considering.

# Try Liggit on Ferns

# Mildew on Roses and on Grapes and Gooseberries

IT was in the summer of the year 1886—35 years ago—there was a vineyard in the Town of Fishkill that was sorely troubled with Mildew; and after a little practical experimenting, the powder "GRAPE DUST" was found to be quite successful in controlling the Grape Mildew.

Immediately following this, the Mildew on Roses, both indoors and out-of-doors, was attacked by using the GRAPE DUST with a Bellows on outdoor Garden Roses. Its faithful use in this simple manner was very successful in preserving the foliage of the Rose bushes.

A Florist of repute tried it against other remedies on the Roses planted for an early crop of Commercial Flowers. The result was appreciation of the article which was called

## HAMMOND'S GRAPE DUST

## Black Spot on the Leaves of Roses

This disease is one that seems to be well nigh universal wherever Roses are grown, although some varieties are more tender or less able to resist its inroad than some others. In our experience, on the banks of the Hudson and elsewhere, it develops more perceptibly during a spell of warm, humid weather, and this weather condition will quickly spread a few spots over half a leaf. The leaves first show a small black spot, which grows, and grows fast in a day or two of humid weather; and sometimes the leaves of a bush will drop off so as to be perceptible. A Moss Rose will sometimes seem to be struck with this trouble when a more common kind will show less. This Black Spot, which is called "Actinonema Rosae," grows in the tissue of the leaves, and where Roses are grown, whether outdoors or in large or small greenhouses, this trouble is apt to occur.

In treating Roses for Black Spot, the remedy, to be effectual, needs to be used early. For years it has been demonstrated that

## HAMMOND'S COPPER SOLUTION

IS A RELIABLE PREVENTIVE REMEDY. After the leaves have started, syringe or spray the bushes with the diluted solution. And this care may need to be taken two or three times during the season. And in a greenhouse, as a preventive measure, spray the soil in which the Roses grow. The Rose Rust is a trouble which affects hardy Roses more than some of the more tender varieties, and the very use of the COPPER SOLUTION as a preventive remedy for Black Spot has the effect of checking the Rose Rust.

## HAMMOND'S SAFE REMEDIES

**For General Service Sold By Seedsmen**

**Thrip Juice**, for Aphis or Lice, Red Spiders and Soft Scale. In use since 1883.
**Cattle Comfort**, used first in 1887.
**Grape Dust**, for Mildew, etc. Used on Grapes and Roses since 1886.
**Copper Solution**, a useful Fungicide for many things.
**French Bordeaux Mixture**, in Pulp. A Standard Fungicide. (When we first made this preparation in 1885 we could hardly get it tried as a gift.)
**American Sheep Wash**, to destroy parasites on Sheep or Calves. In use since 1886.
**Scrofularia Powder**, made to prevent the ravages of Carpet Beetles in 1888.
**Horicum**, a Lime and Sulphur preparation made in 1904.
**Slug Shot**. Kills Saw Bugs and insects in Field or Garden. Used since 1880.
"**H. W. K.**"—Hammond's Weed and Ivy Killer, a great saver of labor—used first in 1886.

**MADE AT BEACON, N. Y.**

**READ OUR PAMPHLET**

"Catalogue nurserymen advertise only in the fall and spring. I never knew exactly why, so I asked a good many and it interested me to find that I got the same answer in every instance: 'It doesn't pay to advertise at other seasons. We receive orders only in the fall and spring.'

"The last part of that statement, we all know to be perfectly true. Fall and spring are the planting seasons. Folks send for nursery stock when they are ready to plant it. But we are not talking about planting; we are talking about buying. I feel very sure that folks buy trees and plants every day in the year; that is, they make up their minds to buy just as you and I do about the things we buy.

"For example, when does a woman buy rose bushes? Of course, she makes out her order and sends it off in the spring, because that is the time to plant roses. But we are not talking about delivering and planting; we want to know when she buys roses. When does that woman make up her mind to buy roses and what varieties to buy? Isn't it in June, when roses are in bloom in her garden or in the neighbors' gardens? And why isn't that the very best time to advertise roses?—to have the garden's beautiful suggestion of what to buy supplemented by the advertised suggestion of where to buy?

"When does a man decide that it might be a mighty fine idea to have half a dozen peach trees in the back garden? Isn't it likely to be at about the time when Friend Wife is feeding him peaches-and-cream for breakfast and peach-cobbler for Sunday dinner? Doesn't he realize then that the grocer's price for a basket of peaches would buy a tree or two for his own garden?

"Now, that idea of using and profiting by the illustration of our products in the orchard and in the garden can be carried out in every month and every week in the year. Peonies should be planted in the fall; but it looks to me like a mighty good time to advertise them when peonies are in bloom in the spring. Fruits can be profitably advertised in their fruiting season. The time to talk fruit is when folks are eating fruit. Last summer, I read a newspaper account of a man in Illinois who sold his crop of Yellow Transparent Apples on a forty acre lot for $20,000. Now, why wasn't that fact a good thing for nurserymen with apple trees to advertise? And why wasn't that the very time to advertise? Advertising is always most effective

when tied up to a concrete fact. And there is no month in the year when nurserymen can't do that. In the dead of winter, when the evergreens stand like brides in their snowy veils, when the hedge of hemlock or of spruce gives cheer and protection to the place, when the slender birches stand like sentinels against the grey skyline, when the barberries with their ripe, red berries add a touch of warmth and color to the snow-covered lawn,—isn't that a good time to call attention to the enhanced beauty of the landscape and to suggest where those things can be bought? We must use the constant selling help of our products.

"Can we nurserymen learn something from that experience? A four, eight or sixteen-page folder, offering only one or two articles like Roses or Peonies or hedge-plants or shade trees or evergreens, is far more effective and will bring more orders than a catalogue of two hundred pages. The folder is inexpensive in printing and postage. Besides, those who write you are not interested in everything you grow. They nearly always tell you what they want. A woman who goes into a department store to buy a pair of silk stockings doesn't expect to have to examine the stew-pans and the wash-tubs and the smoking-jackets just to get a chance to buy the thing she wants to buy. I'd say: split the catalogue up into a number of small folders each offering one line; advertise each line in its fruiting or blooming season; and remind buyers with a dozen small catalogues instead of one big one. Some progressive and prosperous firms are doing that right now. The folder is specific, it answers the inquiry: it talks about one thing at a time; it is a bullet instead of bird-shot.

---

"Besides, we grow entirely too many varieties. Half of them are has-beens; many are never-wasers. A nurseryman will remember that last season he got an order for a couple of trees of a variety that somebody's grand-mother thought a lot of on the old home back in Vermont or down in Texas; and so this summer he scurries around and gets some scions and puts in fifty or a hundred buds in the remote hope that he may again hear from some other descendant of the old lady. But that isn't business. I believe that we could discard seventy-five per cent of the varieties we grow without loss to planters or to ourselves.

"An industry so unfettered by localizing conditions can profit and does profit through advertising. No business that I know of needs advertising like the nursery needs it; no business that I know of so readily responds to the effect of intelligent advertising.

---

"If I had any suggestions to offer, they might be these: Have something to say; say it in few words; count 'em as you count the words in a cablegram, for they cost a lot more. Let every statement be frank, straight-forward and absolutely truthful. Select a single line or a single idea relating to your business and feature it conspicuously in every advertisement. Vary the rest with the season. Talk about one thing at a time; talk about what the buyer is interested in. Avoid humor as you would a pestilence; you may be as ponderously dull as you can and likely as not it will be accepted for wisdom; but beware of wit. I'd rather advertise in a big paper than in a small one; its readers are apt to be better prospects. I'd rather advertise on the same page with a dozen other nursery firms than on a page alone; competition helps. The prestige of the editorial page gives weight to what appears in the advertising pages; therefore, the paper with a following is a good place to advertise. I'd rather have six inches in the biggest and best paper than one inch in six other papers. Large space is more effective and therefore cheaper than small space; but, large or small, remember the effectiveness of the wide margin. And when you have told your story,—stop. Use short, everyday, English words and few of them. Offer one thing; but suggest others. Make it much meat and little gravy.

"You advise folks to go to a nurseryman for trees, don't you? Now we nurserymen are not advertising experts. It's hard to grow good trees; but it is harder to write a good advertisement than to write a good novel. A good advertising agency can present your story better than you can. The nurseryman must furnish the idea—the 'reason why' as applied to his particular business, but the man used to doing that can dress it up better than you can. The advertising, the catalogue and all other printed matter must be in perfect harmony. They should be prepared together. Those in an orchestra play from the same score. Decide on what sum you want to invest in a catalogue and then you or your advertising agency tell your printer that you want so many copies of a catalogue of so many pages and to give you the best he can for the money. If the printer is a wise merchant, he wants your future orders; he is a fool if he doesn't give you all he can for your money. If you buy like the planter who shops around for the cheapest trees, you may possibly have an experience like his."

---

Martin Dunn, aged 48, gardener for Miss Emily W. Biddle, at Lenox, Mass., was recently killed by a fall.

**The Fern Show**

The big fern show in Boston is in full swing as we go to press. It is a wonderful show, without doubt the greatest event of the kind ever staged in America. It is a unique show in many ways. Apart from the orchids and a few large exhibits, very few flowers are to be seen. Yet, in spite of this fact, the fascination of the show is felt as soon as one enters the hall. The lavish display of ferns, palms and other tropical plants which greets the eye as soon as the visitor enters the hall creates an atmosphere which we have not found in any other show.

There is seldom a show which means so much to members of the trade. Here is offered an unusual opportunity to see the best examples of practically all the commercial ferns which are on the market today, as well as a great many lesser known forms from the houses of specialists. We are not sure this particular type of show will appeal to the general public as much as some others. Still the splendid display of orchids gives variety and is in itself worth the price of admission.

It has cost a lot of money to stage all these exhibits, and a debt of gratitude is due the growers who have worked so hard to make the show an outstanding success. Without doubt the series of exhibits presented by the Massachusetts Horticultural Society in the last two years marks an epoch in the history of horticulture in America.

---

**Ferns In General**

This is distinctly a fern season. Never has the demand for these plants been so great. Growers everywhere report that they have had difficulty in keeping up with their orders, and retailers in many cities say that they are selling ferns almost as fast as they can send them out. Without seeking for any explanation of this situation, we feel confident that it is not merely temporary, and that the demand for ferns will continue to grow. Few other plants are so satisfactory in the hands of amateurs, and few are more decorative in private greenhouses.

The Boston fern has proved one of the greatest money makers the florists have ever encountered. The fact that it is continually producing new forms helps to sustain the interest of growers and buyers alike. Enterprising florists will take advantage of the opportunity to push the fern while its popularity is strong. There are few cities where greater buying cannot be induced through judicious advertising and perhaps by special sales. The right time to sell any plant is when people are in the mood to buy it, and the fern market is now running good.

---

**Business Getting**

There is no doubt of the fact that florists are at last feeling the effects of the general business depression. This is inevitable, and they should congratulate themselves on the fact that it has been so long in coming. There are other reasons for congratulation, too. Apparently the florist trade is not being hit anywhere near so hard as many other lines of industry. Moreover, there is no reason to believe that there will be a greatly lessened demand for flowers or plants. Probably prices will have to drop, but they are not going down to pre-war levels, and they are not going below a money-making basis.

There is this to be said, though. The florist who allows himself to drift with the tide or to stick in a rut is likely to find himself rather badly off. It is the man who is willing to fight for his business who is going to keep on making money. The possible ramifications of the florist trade are vastly greater than is commonly realized. An illustration of that fact is contained in the article on another page describing the activities of a big retail florist and grower in Chicago. What this concern is doing in a large way other florists with perhaps a more limited field can do in a smaller way.

The question of advertising is also one not to be overlooked. To stop advertising because business is dull is the poorest policy that can be adopted. The very time to increase your advertising appropriation is when business is constantly growing poorer. At the same time you are justified in using special care in writing your advertisements, and particular discrimination in placing them. Florists as well as nurserymen can learn much from the paper on advertising methods by John Watson which is reproduced on another page of this issue—one of the best papers on the subject which we have ever seen.

# "Montgomery's Priscilla"

That's the name of the new pink rose! The name will be "Priscilla" probably after the public has had it a while, but we have had to add the prefix to cover the rules of nomenclature.

In order to get someone who knows more about roses than we do to give an unbiased, honest opinion on the merits of this rose, we have placed 12 plants of it with each of the following rose growers:

E. G. HILL CO., Richmond, Ind.
DAILLEDOUZE BROS., Brooklyn, N. Y.
ALBERT H. AMLING CO., Maywood, Ill.
DUCKHAM-PIERSON CO., Madison, N. J.
ROWAYTON GREENHOUSES, Rowayton, Conn.
MILLER FLORAL CO., Farmington, Utah
WELLWORTH FARM GREENHOUSES, Downers Grove, Ill.
A. S. BURNS, JR., Spring Valley, N. Y.
ROBT. SIMPSON, Clifton, N. J.
CHAS. H. TOTTY CO., Madison, N. J.
NOE-RUZICKA CO., Madison, N. J.
WM. H. ELLIOTT CO., Madbury, N. H.
ANTHONY RUZICKA, Madison, N. J.
W. J. PILCHER, Kirkwood, Mo.
JOS. HEACOCK CO., Roeloffs, Pa.
WENDLAND & KEIMEL, Elmhurst, Ill.
JOY FLORAL CO., Nashville, Tenn.
ROBERTS ROSE CO., Denver, Colo.
GEO. C. WEILAND, Evanston, Ill.
LAKEVIEW ROSE GARDENS, Jamestown, N. Y.
BASSETT & WASHBURN, Hinsdale, Ill.
HARRY O. MAY, Summit, N. J.
F. R. PIERSON, Tarrytown, N. Y.
L. B. CODDINGTON, Murray Hill, N. J.
JOS. H. HILL CO., Richmond, Ind.
STEPHEN MORTENSEN, Southampton, Pa.

Ask them about it, if you will, at any time. They have our permission to tell the truth. We are going to let this rose sell itself! We shall be simply order takers.

A. N. PIERSON, Inc. Cromwell, Conn.

### MRS. EMMA SCHREINER

Mrs. Emma Schreiner, wife of John I. Shreiner, a florist at Greenland, Pa., died Friday, Sept. 16th, after an illness of almost a year.

She is survived by her husband and three children: Emaniel E. of Lancaster and Miss Miriam and Esther at home, also two brothers and one sister, Clinto Eby of Mt. Joy, Pa., and John Eby of Pond Creek, Oklahoma, the sister being Mrs. Harry Shaeffer of Mt. Joy, Pa.

The funeral was held from the Mellinger Menonite Church and interment in the cemetery adjoining.

To The Trade—

Thos. F. Galvin, himself, will give your orders his personal attention at his son's store.

**Thomas F. Galvin, Jr.**
226 DEVONSHIRE STREET
BOSTON, MASS.

## George Watson's Corner

"You in your small corner and me in mine."

Paul Huebner, landscape gardener for the Reading system, has just returned from a pleasant visit with his old friend, Patrick Foy, of the Norfolk & Western R. R., at Roanoke, Virginia. He enjoyed the confab with his old confrere in his own line of business very much. They are both veterans in the railroad gardening service and have done fine work in their day. Only it was very hot says Paul; 105 in the shade, is what he talks about, during his visit.

Captain Clement's party, which has become an historical annual event took place this year, September 10th and 11th, at the old rendezvous, Port au Peck, back of Long Branch, N. J., and was attended by over a hundred of the distinguished in the world of civil engineering—of which the Captain himself is the great past master and present exponent. There were present also a great many from other walks of life; wits, philosophers and poets; great statesmen; great singers; great orators, and even a sprinkling of the great clergymen of the realm—the latter probably to inculcate the divine spirit of decorum so appropriate to all such gatherings. Even horticulture was represented, as we noticed Paul Huebner, landscape gardener for the Reading Railway system, there, and a few others. The weather was fine and everybody had a splendid time during their two days' stay, and all left singing the praises of their host and looking forward to the next one in 1922—"as a boy does to Christmas" as Brother Devlin put it.

William F. Gude and his son, Granville, gave us a pleasant call recently on their way to spend a vacation at the seaside with Commodore Westcott at Barnegat Bay.

Robert Craig is getting ready for his trip to his tropical home in Porto Rico. He expects to sail about September 24th. His sojourn at Ocean Grove during the summer has been pleasant, but his health has not had

A. L. MILLER, Jamaica, N. Y.

the usual sparkle. The old asthma trouble has been bothering him. On the other hand we are glad to report that Mrs Craig is much improved.

The florists of Philadelphia are looked up to the world over as artists and pioneers in the floral world. John Burton showed them the fine points of the American Beauty rose; William K. Harris made the city famous with the Lilium Harrisi, or Easter lily; Robert Buist introduced the poinsettia, and we might mention many other wonderful things to the credit of our city in the floral line. But my object at this particular moment is to call the world's attention to the fact that our florists are not only artists of renown in their chosen fields, but also good sports.

Twenty-five years ago the Florists' Club had a team of ten-pin players that held the championship for many years, not only here but all over the United States and Canada. Later they had a trapshooting team that became equally famous as experts with the gun, and remained so up to recent times. Now comes the Diana in the yachting arena, carrying everything before her in the Labor day tournament on the lower Delaware. Bart Cartledge, her owner, is a Philadelphia florist, and has always been an ardent yachting enthusiast. He was also a great shooter and a great bowler, and always helped his city in its championships at home and abroad. Therefore, in taking our hats off to him, we not only pay a personal tribute but we lay a little bouquet before the artists in the floral profession, not only for the way they "say it with flowers" but because we appreciate good sports, also.

## NEWS NOTES

The engagement is announced of Mr. John Herbert Alexander, son of J. K. Alexander, the dahlia expert of East Bridgewater, Mass., to Miss Ferna Sweney. Both Mr. Alexander and Miss Sweney have hosts of friends from whom they are receiving warm congratulations.

W. G. Bush & Co., of Nashville, Tenn., recently attracted much notice by a flower show held in their display room. The show was planned and executed by Miss Frances Sinclair, and more than eighty different exhibits were made.

John C. Meyer, president of the J. C. Meyer Thread Co., of Lowell, Mass., with Mrs. Meyer and H. F. Meyer, superintendent of the mills, have been making an automobile tour of Canada, visiting the florist trade and combining business with pleasure.

### National Publicity Campaign

Renewed interest is being taken in the campaign now that the summer season is passing. The Publicity committee is planning to resume national advertising in October, and, judging from the general opinion expressed in the trade, such resumption will be most timely.

The secretary is sending out to about two hundred of the "live wires" interested in the campaign, subscription books such as were circulated at the Washington convention, containing subscription blanks, which they are urged to place before florist non-subscribers in their different territories, with explanations as to the advisability of contributing to the fund. The return of these blanks completed is hopefully looked for by the committee by October 15th, when there will be need for all available funds. All doubt as to the efficacy of national advertising was long ago removed, and if the committee is provided with a sufficiency of funds, the advantages previously obtained can be materially increased for the good of all in the trade.

The following subscriptions are of record since the last report:

| | |
|---|---|
| Louis A. Kintzele, Denver, Colo. | $ 2.00 |
| J. H. Playdon, Andover, Mass. | 10.00 |
| Edward Towill Roslyn, Pa. | 20.00 |
| E. H. Carey, Brighton, Pa. | 10.00 |
| The Saginaw Bay City Floricultural, Saginaw Bay City, Mich. | 25.00 |
| Allied Florists Ass'n of Chicago, Chicago, Ill. | 639.47 |
| Abram Stevens, Spring Valley, N. Y. | 10.00 |
| | $716.47 |
| Previously reported | 28,080.68 |
| | $28,797.15 |

### National Flower Show

The preliminary work of promotion of the big show to be held in Cleveland next spring is in active progress. The various local committees are sparing no effort to complete the details entrusted to them, and everything is moving along harmoniously toward the object in view, the biggest and best show of the series.

The supply and auxiliary trades are reminded that if floor plans of the trade section are not at hand, copies may be obtained promptly upon application to the secretary The latest addition to the list of applicants for space in this section is W. Atlee Burpee & Co. of Philadelphia, who have made a liberal reservation.

The new building in which the show is to be held is rapidly approaching completion. Its finish is so far assured that it has been leased for the use of the American Building Exposition, which is to open on January 4th, and run for ten days.

JOHN YOUNG,
Secretary.

## SERVICE THAT PAYS

Swain Nelson & Sons Co., Chicago nurserymen and landscape gardeners, are supplying a service which retail seed stores could easily and profitably pattern after. It furnishes and installs plants and shrubs and on yearly contract takes care of them. Banks, public institutions, department stores, sales rooms, furniture stores—in fact, any concern which desires to use plants and which does not like to undertake the care of them—are the the customers of Swain-Nelson. Several of Chicago's large establishments—Federal Reserve bank, Northern Trust Co., the new Wrigley building, Triangle Motors, Henrici's restaurant, etc.—are using this service. This service is largely aided through the use of a type of flower box that is particularly well adapted for this purpose, inasmuch as it supplies water automatically and has a simple and efficient air circulation system.

---

Two highly specialized courses in floriculture and greenhouse work will be conducted at Cornell University, from November 9 to February 18. A booklet describing all the courses at the College of Agriculture will be sent upon request to the secretary of the college at Ithaca, N. Y.

## BEHIND THE DOORS

Few people passing through the streets of South Boston in automobiles, or walking, would realize the beauty there is behind the battered, weather-stained doors. At the exhibition of the products of children's gardens in Horticultural Hall was a display of distilled herbs made by two Lithuanian children, Nellie and Adolf Rullis, which attracted me to know more of the gardens in which the flowers were grown. They showed southernwood as a cure for hysteria, spearmint for quickening an appetite, English ivy as a cure for nightmare, and marigold for fevers. Common remedies used by these people as cures till the trouble is over or the doctor called in.

Miss Bertha Pierce, who had supervised these gardens through the summer, invited me to visit them with her. I have grown wise in realizing that the passing moment is the one to use, so with the fear of being home later than I was expected, in the pleasant company of Miss Pierce I ordered my chauffeur to take us from Horticultural Hall to 305 East 8th street.

This garden was hidden behind great signs advertising the Camel cigarette, and other notices with which the summer had made us familiar. A glimpse between these boards invited us to enter and we were most cordially received by Mr. and Mrs. Eusebius Hein, who lived up three flights of stairs, but whose joy in gardening made us wonder if the Germans would return to us through their love of flowers, music, poetry and art. Every inch of that back yard was cultivated. So I took a paper and pen from my bag and listed what was growing there. Two small apple trees, peach trees large enough to bear fruit, a small pear, vines with clusters of grapes hanging from them, currants, gooseberries and strawberries. Growing up between the strawberry leaves were blue forgetmenots, making a pretty display of color. Other flowers were balsam, growing better than ours at Hillcrest; bouncing-bet, asters, coreopsis, marigolds, dahlias, hollyhocks, tall sunflowers, tiger lilies, sedurns, gaillardia, sweet william, roses, petunias, salvia, chrysanthemums, nasturtiums, peonies and iris. I am quite sure if I were to visit this garden again today I would find some flowers I had not put on my list. The flowers made the garden very gay, but the more substantial vegetables were also there, sweet corn, cabbage, carrots, parsnips, beets, kale, lettuce, squash, rhubarb, horseradish, and for herbs there were sage, summer savory, mint, and peppermint. All in one back yard.

**CHAS. FROST**
KENILWORTH, N. J.

The next garden we visited was at 60 Thomas Park. Here I wished I were visiting the garden in my second reincarnation, when I want to come back to earth as an artist to paint the fields of red topped grass. This garden was terraced and had from it a beautiful view across the bay to Squantum. As we looked from its lower part up across all the bright display of asters, dahlias, sunflowers, pinks, dark velvety purple petunias, to where nasturtiums were trained against the wall and a variety of fine old fuchsias graced one corner, to the row of pink and white geraniums in the windows of the brown house, and felt that landscape artists could learn effects by being there. It was also interesting to know that this garden was a bit of the old world set down in the new for all of Mrs. Strassel's seeds had been sent to her by her family in Lorraine.

Time was passing, so we paid a short visit to a garden on Eighth street to see a large English walnut tree on which nuts were growing. Mr. Menslage, the owner of this garden, was not at home, but we were most hospitably received by his cat, who conducted us down the grass paths to the tree and then saw us courteously out of the door.

Our last visit was to Mr. Alessi's fine vegetable garden, where we saw the long, slender Italian beans, tomato vines from which the fruit had been picked to be put up for winter use, potatoes almost ready to dig, and the squash vines. Miss Pierce said that Mr. Alessi had treated her to blossoms from his squash vines fried in oil and that she had found them delicious.

As I drove back to Weston that evening I felt that I had Miss Pierce to thank for a very interesting little

### AN EPITAPH

"He meant well, tried little and failed much."
"Erected by his loving Wife."

Near Saratoga, a headstone in the cemetery thus epitomizes a life's effort. In the files of our wartime periodicals, some advertisements now stand as mute evidence of similar weak "try-outs of advertising" by well-meaning but short-winded corporations.

National advertising need not be experimented with—it works.

Either advertise or don't advertise, but save yourself the cost of "trying-out" advertising and don't start for a run of less than five years.

Butterick, Publisher.

The above well describes the needs for a furtherance of our national advertising campaign. It is necessary to permit the efforts of our past four years to continue so as to reap the dividends of our investment.

We agree with our Butterick friends that to experiment does not pay but to double our efforts will yield a handsome reward to all florists who contribute to the cause. Send your share to our secretary to help extend our campaign.

HENRY PENN,
Chairman,
National Publicity Campaign.

## CHANGES IN THE STAFF AT AMHERST

Two changes in the staff at the Amherst Agricultural College are announced. S. Church Hubbard has been appointed to the position of Foreman in the Department of Floriculture to succeed James Whiting, who has gone into commercial work in Dover, N. H. Mr. Hubbard comes to the department with a fine record of training and experience. For seven years he was with A. N. Pierson, Inc., Cromwell, Ct., holding the positions of Assistant Propagator, Propagator, Grower, and Section Foreman in the greenhouses; and Assistant Foreman, Foreman and Salesman in the Nursery, Perennial and Bedding Rose Department. For one year he was associated with F. W. Fletcher, Inc., Auburndale, Mass. Since July, 1916, he has been superintendent of the Trial Grounds of the Department of Floriculture at Cornell University, Ithaca, N. Y.

Richard T. Muller has begun his duties as Assistant Professor in the department, and will prove a valuable addition to the staff. Professor Muller graduated from the College of Agriculture at Cornell University in 1916; during his college course he specialized in floriculture under Prof. E. A. White. In the last year of his course he assisted in some of the class work of the department. From 1916-1918 he was an instructor in Horticulture at the University of Maine at Orono, and also had charge of the grounds and greenhouses. In 1918 he taught for six months at Hampton Institute, Hampton, Va., but during the same year he returned to the University of Maine as Assistant Professor of Horticulture. Two years later he was promoted to the position of Associate Professor. In 1920 he received the degree of Master of Science from the University of Maine for his work on heredity in Nasturtiums. Professor Muller will devote his time primarily to teaching work, taking classes in the Two Year and Four Year courses.

Saturday, September 3, the Gardeners' and Florists' Club enjoyed an outing in Framingham, visiting the Framingham Nurseries and the Little Tree Farms Nurseries. Mr. Richard Wyman, proprietor of the former establishment, and his estimable wife, prepared a delectable lunch which was served on the arrival of the visitors. Although the attendance was not large, owing to the extremely hot weather, those who took the trip counted themselves amply repaid, as both the nurseries contain a great amount of material of much interest to them.

A MESSAGE TO RETAILERS

There never was a time when retail florists needed the benefits of the F. T. D. to a greater extent than now. There never was a time when retailers needed more to work together for the improvement of business conditions. There never was a time when it was more necessary to learn everything which can be learned about the best methods of doing business. These facts constitute the best of arguments for attending the annual convention of the F. T. D., which will be held in Toronto, October 11-13. It will be a business convention all the way through, and one no retailer can afford to miss. Let's all go!

(Signed) Charles Boyle,
Boston Representative.

## LANCASTER COUNTY FLORISTS' ASSOCIATION

By invitation the September meeting was held at the greenhouse establishment of Mr. Chas. B. Herr, Strasburg, Pa. Mr. Herr is certainly showing the people of Strasburg what can be done with a moderate sized lawn in the way of landscape work and bedding. In compliance with a recent law compelling the display of a regular size American flag at all public meetings excepting purely religious ones, Mr. Herr had not only one but a number of them.

At 6.30 a bevy of Strasburg's belles served lunch to the entire party in courses without number and quantity without end, and as Mr. Herr is living in the land of single blessedness, these young ladies did themselves proud in seeing that both the host and his guests had every attention.

At 7.30 the meeting was called to order with Mr. B. F. Barr in the chair, and the regular order of business was gone through with.

It was decided to leave Lancaster on Thursday, Oct. 6th, by way of Columbia and York into Baltimore and then out to Vincents at White Marsh, Md., for the Dahlia show.

---

The annual convention of the F. T. D. A. will be held in Toronto, Ont., October 11, 12 and 13. A reduced rate has been granted on all the Grand Trunk lines, and will be under a certificate plan.

# CLASSIFIED DIRECTORY

**Advertisements in this Department, Ten Cents a Line, Net**

### GREENHOUSE NOZZLE

The new Manaway greenhouse nozzle is a decided advance over any greenhouse nozzle heretofore made. By its peculiar construction the side spray is thrown out which applies the water evenly from the pipe outward. Our long-throw nozzles cover a space up to 18 feet from the pipe. We can supply nozzles that will cover any space desired. If you will advise us under what pressure your system operates and the width of space you desire to cover, we will mail without charge a sample nozzle. C. W. SKINNER, Newfield, N. J.

### END NOZZLE

Every one who is using the Manaway System without the end nozzles can now fit their lines with our new 3-outlet end nozzles which take the place of not only the regular nozzle but also furnish 2 streams, one 4 and the other 8 foot out of true. One of these nozzles placed at the beginning or end of the line has the effect of lengthening the line 8 feet at each end. These nozzles can also be used in other systems which use a large nozzle. The price is 15c each, postpaid. C. W. SKINNER, Newfield, N. J.

### BULBS

C. KEUR & SONS, HILLEGOM, Holland. Bulbs of all descriptions. Write for prices.

**MASTICA**

For Greenhouse GLAZING
Use It Now

F. O. Pierce Co.
12 W. BROADWAY
NEW YORK

Mastica is elastic and tenacious, admits of expansion and contraction. Putty becomes hard and brittle. Broken glass more easily removed without breaking of other glass than occur with hard putty. Last longer than putty. Easy to apply.

9 benches and 10 walks in the one house.
Three of the old houses could snuggle nicely inside this big one. Call around half a century or so from now and you'll find the house still sturdy and strong.

# The First House of Noe's New Range

A while back, you and I sat down and had a good talk together about L. A. Noe's new heating system he installed last summer, on the home range at Madison, N. J.

You'll recall how we never got any farther than just a mention of his new house.

Sorry we didn't have time then; but now that we have, let's have a chat about it.

You will recall that Mr. Noe's father, before he died, had built some 34 or so narrow rose houses, none of which was more than 20 feet wide.

Some of them got so old, it was a waste of money to put another cent of repairs on them.

So he ripped down 3 and put up one house 55 feet wide and 204 feet long.

You and I remember when the Noe houses were looked upon as being the last word in point of construction, width and arrangement.

But when you compare this new house with them, it shows what rapid strides have been made in greenhouse building in the last few years.

Words can recommend our houses; but it's our construction that holds them up.
Some of the upholders for the roof and the stiffeners for the gable, show up plainly in this glimpse.

For the ground space covered, these big houses actually cost less.

They heat easier and stay heated longer on the same heat.

All that big air space above the plants, which the high ridge makes possible, acts as a regular cushion against sudden changes.

As for the ventilation; the air in these wide houses has a wonderful buoyancy, which is particularly noticeable in the early morning, when narrow houses, as you know, are apt to be heavy and rather lifeless.

Whenever I get started talking on the strong point of our big houses, am worse than a Big Ben clock, the way I tick along.

However, Big Bens get a lot of folks up and doing. So when you call me Big Ben names, feel rather complimented.

If you want to hear some more big house tickings, drop us a line.

Not Open Sundays **WEST NEWBURY, MASS.**

Catalog on Request

### BOSTON.

Local florists had a prominent part in the big Waltham Fair this year. The horticultural end of the fair was under the direction of Allan Peirce, who was "Johnny on the Spot" from beginning to end. An entire tent was given over to the display of horticultural products. This display included many amateurs' exhibits, but the commercial men were very much in evidence, nevertheless. Wollrath & Sons made a particularly generous contribution. They had a section of the tent where they featured palms, ferns, dracaenas and crotons, and other plants, in a large way. It was a noteworthy exhibit, and one which won no little praise. Likewise it won first prize of $75 for the best commercial group.

Harold Ryan, the hustling Cambridge florist, also had an excellent display which added not a little to the success of this feature. He was given a second prize.

Sydney Hoffman attracted much attention with a splendid group of baskets, the flowers of which were arranged with his exceptional skill, and it is hard to beat Mr. Hoffman along this line. He was given first prize for a basket of "glads," first for a basket of asters, first for a basket of fruit and flowers, and first for a basket of vegetables and flowers.

Fottler, Fiske & Rawson, who grow dahlias in a large way and feature many of the best varieties, were given first prize for their display.

Prof. J. G. Jack, of the Arnold Arboretum, has recently returned from a plant hunting trip to the Glacier Park in Montana. He was very successful, as was shown by the large number of specimen plants shipped back. These plants have now been set out in the propagating beds at the Arnold Arboretum, and are being carefully nursed by Mr. W. H. Judd, who is in charge of the institution's propagating work.

Mr. James J. Casey, of the Rosary, 749 Boylston street, supplied the decorations for the Mahoney-Tracy wedding, which was solemnized at Winthrop and followed by a reception in Hotel Somerset, Boston. The floral decorations were very elaborate, especially at the reception, and won many compliments for Mr. Casey. The principal feature was a floral fountain, a somewhat unique conception, and worked out with surprising grace and symmetry. Baskets of flowers on small tables were used to supplement the principal feature of the scheme.

C. M. Humphrey of Zanesville, Ohio, has been spending several days in Boston, visiting the growers and the retail stores. Mr. Humphrey is an extensive grower himself, as well as a retailer, having about 50,000 square feet of glass, but grows mostly for his own use. He is especially interested in cyclamen and is reported to grow them very well.

The Massachusetts Horticultural Society lost a prominent member in Walter Hunnewell, who died a few days ago at his home in Wellesley, aged 78 years. Mr. Hunnewell was deeply interested in horticulture and was at one time treasurer and trustee of the Horticultural Society. His large estate in Wellesley is famous for its gardens and its collection of unusual trees.

Antonio Muscolino, formerly with Wax Bros., has joined the staff of the Rosary.

Wollrath & Sons, of Waltham, have purchased a new White truck with a special body, and heated from the exhaust to protect the flowers from frosts.

# -HORTICULTURE-

Entered as second-class matter December 8, 1904, at the Post Office at Boston, Mass., under the Act of Congress of March 3, 1897.

Vol. XXXIV OCTOBER 10, 1921 No. 7

## THE TALK OF THE TRADE

Newton, the florist, of Hyannis, Mass., has things pretty much his own own way on the lower end of Cape Cod, as there is no other florist between him and the deep blue sea where the land leaves off at Provincetown. Nevertheless, he has found that it is easy to bring in much new business by the right kind of advertising methods. At the recent Barnstable Fair Mr. Newton occupied a booth, which he made one of the features of the exhibit. The booth was made attractive with many different plants. He wasn't satisfied, however, with merely a pretty display. He wanted something which would actually bring business, and hit upon the plan of showing samples of his work in different forms. He had, for example, the Odd Fellows' Three Links, made up in flowers. He had also handsome shower bouquets for brides and others for bridesmaids. He had likewise samples of corsage bouquets for the dance and vases of flowers for the house.

Mr. Newton was pleased, of course, with the first prize, which was awarded him, but took more genuine satisfaction in the knowledge that he had gained not a little valuable advertising by the methods which he had followed. He was soon able to prove this fact because orders began to come in from people who had seen his exhibit, and some of whom told him that they had never realized before that they could get artistic pieces of this kind made up as near home.

---

I think there is a growing appreciation among the people who promote fairs and similar public exhibitions of various kinds that flowers go far towards bringing success. At the Men's Apparel Show, which has been going on for the past week in Mechanics Hall, Boston, Houghton-Gorney has had a very interesting display which occupied the center of the hall and attracted much attention. The lay-out included a small pond with a rustic bridge crossing it. There were small trees and flowers scattered about the plot, but the feature which attracted the most attention was a large floral clock. Throngs of people were forever pausing to look at this clock, and many of them were heard to exclaim enthusiastically when they saw that the hands moved, "My, it is really going!"
